## Public-Sector-Solutions Test Vce | Public-Sector-Solutions Exam Preparation

By virtue of our Public-Sector-Solutions practice materials, many customers get comfortable experiences of Whole Package of Services and of course passing the Public-Sector-Solutions study guide successfully. Our company conducts our business very well rather than unprincipled company which just cuts and pastes content from others and sell them to exam candidates. All candidate are desperately eager for useful Public-Sector-Solutions Actual Exam, our products help you and we are having an acute shortage of efficient Public-Sector-Solutions exam questions.

### Salesforce Public Sector Solutions Accredited Professional (AP-222) Exam Sample Questions (Q91-Q96):

#### NEW QUESTION # 91

A Public Sector Organization (PSO) would like to enhance its publicly available website, built in Experience Cloud, to allow constituents to report their concerns about someone's health or safety. The PSO is already using Public Sector Solutions. The requirement from the PSO is that the constituent should be able to report their concerns both as authenticated users and anonymously. Additionally, internal staff should be able to separately track their investigations and any follow-up in a separate Case. Leveraging Public Sector Solutions functionality, what configuration should the Technical Consultant use to meet the requirements?

- A. Use record types on Case, one for the constituents and one for internal staff
- B. Use a custom object for the Complaint with a lookup relationship to Case.
- C. Use the Public Complaint and Case objects.

**Answer: C**

Explanation:

Use the Public Complaint and Case objects. This is the lowest-customization answer that still satisfies the business, security, and lifecycle requirements.

The Core Concept Explained: Experience Cloud design is driven by persona, authentication, scale, and sharing. The wrong template or license can create unnecessary cost, weak security, or excessive customization.

Step-by-Step Technical Analysis: Begin with the external persona, authentication requirement, and transaction volume. Select the Experience Cloud license or template that matches that access pattern, then configure sharing sets, external OWD, site visibility, and page access. Finish by testing the experience as anonymous, authenticated, and internal users. Use the Public Complaint object for the external concern and Case for the internal follow-up work. For exam preparation, validate the answer by tracing the record lifecycle, the user persona, and the automation owner from intake through reporting.

Why the Incorrect Options Are Wrong: A uses the wrong packaged object or module boundary for this scenario. C adds a custom build path and increases lifecycle, security, and upgrade effort when a packaged or declarative capability already supports the requirement.

#### NEW QUESTION # 92

A public sector agency is leveraging the Business Rules Engine for its Licensing & Permitting implementation. The agency needs to allow multiple permits for a single application, and the permit fee is calculated based on the type of permits selected.

Which two steps would a technical consultant use to address this use case?

- A. Add an Aggregate Group to the end of the Expression Set
- B. Provide Permission Sets to users for the Expression Set and Lightning Component
- C. Add an Aggregate step to the group and add the SUM function
- D. Add a Lightning Component to query and Aggregate the total value of all permits

**Answer: C**

Explanation:

In the context of a Public Sector agency leveraging the Business Rules Engine for Licensing & Permitting, where multiple permits are allowed for a single application with permit fees calculated based on the selected types, the appropriate steps involve data aggregation. An Aggregate step with a SUM function is used to sum up the total value of all selected permits, addressing the need for dynamic fee calculation. Adding an Aggregate Group to the end of the Expression Set organizes these calculations effectively, ensuring that the total permit fee is accurately computed based on the application's permit selections. This approach aligns with Salesforce's Business Rules Engine capabilities, which allow for complex data manipulation and aggregation to support varied business scenarios, such as permit fee calculations in a Licensing & Permitting implementation.

### NEW QUESTION # 93

A government agency wants to implement the Licenses, Permits, and Inspections modules of Public Sector Solutions. The agency needs to issue licenses and permits to two different sets of constituents; business constituents and private constituents. The agency would like to roll out licenses and permits to their business constituents first, followed by the private constituents at a later date. What data model and implementation strategy should a technical consultant recommend to the government agency for this use case?

- A. Implement the Business Account and Contact data model for business constituents now, and implement the Person Account data model for private constituents at a later date.
- B. Implement the Business Account and Contact data model for business constituents now, and implement the Household Account and Contact data model for private constituents at a later date.
- C. Implement both the Business Account and Contact data model for business constituents and the Household Account and Contact data model for private constituents at the same time.
- D. Implement both the Business Account and Contact data model for business constituents and the Person Account data model for private constituents at the same time.

**Answer: A**

Explanation:

This recommendation aligns with the implementation strategy required by the government agency. Here's the rationale:

- \* Business Account and Contact data model is designed for managing entities like businesses, organizations, and their associated contacts.
- \* Rolling out this model first ensures the agency can meet its priority of addressing business constituents before private constituents.
- \* Person Account data model is tailored for individuals acting as their own account, which is suitable for private constituents.
- \* Implementing this at a later stage aligns with the phased rollout strategy the agency prefers.
- \* Starting with only the Business Account and Contact model keeps the initial implementation focused and avoids unnecessary complexity.
- \* A phased approach allows the agency to learn and refine processes during the first phase (business constituents), then expand to private constituents.
- \* B. Business Account and Household Account/Contact data model:
  - \* The Household Account model is not recommended for this use case. It is primarily used in Salesforce Nonprofit Success Pack (NPSF), not Public Sector Solutions. For private constituents, the Person Account model is more suitable.
- \* C. Implementing both models at the same time:
  - \* Rolling out both models simultaneously (Business Account and Person Account) adds complexity to the implementation. It would require handling two different constituent types from the start, which is against the phased approach preferred by the agency.
- \* D. Implementing Business Account and Household Account at the same time:
  - \* This option introduces an unnecessary mix of data models (Household Accounts instead of Person Accounts). Additionally, implementing both at once contradicts the agency's phased rollout preference.

1. Business Constituents First: 2. Private Constituents Later: 3. Avoiding Complexity During Initial Rollout:

Why Not the Other Options? Conclusion: To meet the agency's requirements, the technical consultant should recommend implementing the Business Account and Contact data model for business constituents now and the Person Account data model for private constituents at a later stage.

### NEW QUESTION # 94

A Public Sector Organization (PSO) has installed Grants Management and would like to ensure that users cannot self-register on the Experience Cloud site, as the PSO would like to register users for now manually.  
What configuration should the Technical Consultant perform to meet this requirement?

- A. Update the appropriate contact page layouts and add the 'Enable Customer User' action
- B. Enable manual registration in the Digital Experiences setup menu
- C. Enable self-registration in the Digital Experiences setup menu
- D. Update the appropriate contact page layouts and add the 'Register User' action

**Answer: A**

Explanation:

In Salesforce Public Sector Solutions, particularly when dealing with the Grants Management and Experience Cloud, controlling user registration is crucial. To ensure that users cannot self-register and instead are manually registered by the Public Sector Organization, the following steps should be taken:

Disable Self-Registration:

Navigate to Setup > Digital Experiences > All Sites.

Select the relevant Experience Cloud site.

Under Administration > Login & Registration, ensure that self-registration is disabled.

Manual User Registration:

Go to Setup > Object Manager > Contact > Page Layouts.

Select the appropriate page layout(s) where you want to add the manual registration action.

Add the 'Enable Customer User' quick action to the page layout. This action allows administrators to manually create user records from contacts.

By updating the contact page layouts to include the 'Enable Customer User' action, administrators can manually control which contacts are enabled as users for the Experience Cloud site. This method is straightforward and aligns with standard Salesforce practices for managing user access in Experience Cloud.

#### NEW QUESTION # 95

A Public Sector Organization (PSO) has installed Grants Management and would like to ensure that users cannot self-register on the Experience Cloud Site, as the PSO would like to register users for now manually.  
What configuration should the Technical Consultant perform to meet this requirement?

- A. Enable manual registration in the Digital Experiences setup menu
- B. Enable self-registration in the Digital Experiences setup menu
- C. Update the appropriate Contact page layouts and add the 'Enable Customer User' action
- D. Update the appropriate Contact page layouts and add the 'Register User' action

**Answer: C**

Explanation:

Update the appropriate Contact page layouts and add the 'Enable Customer User' action. This selection keeps the implementation declarative and within the intended Public Sector operating model.

The Core Concept Explained: Experience Cloud design is driven by persona, authentication, scale, and sharing. The wrong template or license can create unnecessary cost, weak security, or excessive customization.

Step-by-Step Technical Analysis: Begin with the external persona, authentication requirement, and transaction volume. Select the Experience Cloud license or template that matches that access pattern, then configure sharing sets, external OWD, site visibility, and page access. Finish by testing the experience as anonymous, authenticated, and internal users. Disable or avoid self-registration and add the Enable Customer User action to the appropriate Contact page layouts.

Why the Incorrect Options Are Wrong: A does not meet the implementation-quality bar for security, scale, auditability, or maintainability in this scenario. B depends on manual adoption instead of codifying the process into auditable, repeatable Salesforce configuration. D does not meet the implementation-quality bar for security, scale, auditability, or maintainability in this scenario.

#### NEW QUESTION # 96

.....

Not only that our Public-Sector-Solutions exam questions can help you pass the exam easily and smoothly for sure and at the same time you will find that the Public-Sector-Solutions guide materials are valuable, but knowledge is priceless. These professional knowledge will become a springboard for your career, help you get the favor of your boss, and make your career reach it is peak. What are you waiting for? Come and take Public-Sector-Solutions Preparation questions home.
