

Reliable EX380 Exam Syllabus, Reliable EX380 Test Duration

You may attend many certificate exams but you unfortunately always fail in or the certificates you get can't play the rules you want and help you a lot. So what certificate exam should you attend and what method should you use to let the certificate play its due role? You should choose the test EX380 certification and buy our EX380 study materials to solve the problem. Passing the test EX380 certification can help you increase your wage and be promoted easily and buying our EX380 study materials can help you pass the test smoothly.

Are you often regretful that you have purchased an inappropriate product? Unlike other platforms for selling test materials, in order to make you more aware of your needs, EX380 study materials provide sample questions for you to download for free. You can use the sample questions to learn some of the topics about EX380 study materials and familiarize yourself with the EX380 software in advance. If you feel that the EX380 study materials are satisfying to you, you can choose to purchase our complete question bank. After the payment, you will receive the email sent by the system within 5-10 minutes. Click on the login to start learning immediately with EX380 study materials. No need to wait.

Reliable EX380 Test Duration | Valid EX380 Exam Pattern

EX380 is the authentic study guides with the latest exam material which can help you solve all the difficulties in the actual test. Our EX380 free demo is available for all of you. You will receive an email attached with the EX380 training dumps within 5-10 minutes after completing purchase. Immediately download for the EX380 study pdf is available for study with no time wasted. We have money refund policy to ensure your interest in case the failure of EX380 actual test.

RedHat Red Hat Certified Specialist in OpenShift Automation and Integration Sample Questions (Q42-Q47):

NEW QUESTION # 42

Configure RBAC roles with users and groups

Task Information : Grant edit to group dev-team in namespace payments, and grant view to user auditor1.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Create (or switch to) the project
- * `oc new-project payments`
- * Namespace must exist before applying rolebindings.
- * Grant edit to the group
- * `oc -n payments policy add-role-to-group edit dev-team`
- * Members of dev-team can modify most resources in payments.
- * Grant view to a user
- * `oc -n payments policy add-role-to-user view auditor1`
- * auditor1 can read resources but not change them.
- * Verify rolebindings
- * `oc -n payments get rolebinding`

NEW QUESTION # 43

Add tolerations to a deployment

Task Information : Update payments/api deployment to tolerate `dedicated=payments:NoSchedule`.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Patch deployment with toleration
- * `oc -n payments patch deploy api --type=merge -p '{`
- * `"spec":{"template":{"spec":{"tolerations":[`
- * `{ "key":"dedicated","operator":"Equal","value":"payments","effect":"NoSchedule"`
- * `]}]}}`
- * `'`
- * Toleration allows pods to schedule onto tainted nodes.
- * Verify scheduling
- * `oc -n payments get pods -o wide`

NEW QUESTION # 44

GitOps and MachineConfig - Trigger Argo CD Synchronization by Repository Update

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

Step 1: Confirm that the repository being pushed to is the same repository watched by the GitOps/Argo CD application.

This linkage is essential because GitOps acts only on configured source repositories and paths.

Step 2: Commit the MachineConfig changes.

The lab uses:

```
git commit -am "Add MachineConfig for motd"
```

Step 3: Push the changes to the tracked branch.

The lab uses:

git push origin main

Step 4: Allow Argo CD to detect the repository change and begin synchronization.

In a standard GitOps model, the controller compares the Git repository to the cluster state and applies drift correction or new desired resources.

Detailed explanation:

This sub Task SIMULATION is the operational purpose behind the previous Git command Task SIMULATION . The point is not merely to store a file in Git; it is to update the declarative source that Argo CD uses to reconcile the cluster. Once the repository is updated, Argo CD detects the new commit and syncs the MachineConfig into the cluster according to its application definition. This demonstrates a core automation principle in OpenShift GitOps: administrators do not treat the cluster as the primary editable surface. Instead, they modify Git and let the automation layer enforce state. That provides traceability, peer review potential, rollback capability, and consistency across environments.

NEW QUESTION # 45

Schedule a recurring backup

Task Information : Create a daily backup schedule for namespace orders at 01:00.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Create the schedule
- * `velero schedule create orders-daily \`
- * `--schedule "0 1 * * *"`
- * `--include-namespaces orders \`
- * `--snapshot-volumes`
- * Cron format: minute hour day month weekday.
- * Verify schedule exists
- * `velero schedule get`
- * Confirm backups are created by the schedule
- * `velero backup get | grep orders-daily`
- * Scheduled backups usually have names derived from the schedule.

NEW QUESTION # 46

Create and use a service account token via kubeconfig

Task Information : Create SA ci-bot in ci namespace and generate a kubeconfig that authenticates using its token.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Create namespace and service account
- * `oc new-project ci`
- * `oc -n ci create sa ci-bot`
- * The SA will represent automation access.
- * Grant permissions (example: edit in namespace)
- * `oc -n ci policy add-role-to-user edit system:serviceaccount:ci:ci-bot`
- * Without permissions, token auth succeeds but API actions are denied.
- * Generate token (TokenRequest)
- * `TOKEN=$(oc -n ci create token ci-bot)`
- * OCP issues a short-lived token by default (good practice).
- * Create kubeconfig using the token
- * `oc config set-cluster lab --server="$(oc whoami --show-server)" \`
- * `--insecure-skip-tls-verify=true --kubeconfig=ci-bot.kubeconfig`
- * `oc config set-credentials ci-bot --token="$TOKEN" --kubeconfig=ci-bot.kubeconfig`
- * `oc config set-context ci --cluster=lab --user=ci-bot --namespace=ci \`
- * `--kubeconfig=ci-bot.kubeconfig`

- * oc config use-context ci --kubeconfig=ci-bot.kubeconfig
- * This produces a self-contained kubeconfig for CI automation.
- * Test access
- * oc --kubeconfig=ci-bot.kubeconfig get pods

NEW QUESTION # 47

.....

Are you a fresh man in IT industry, or on the way to become an IT career? The EX380 certification will help you learn professional skills to enhance your personal ability. With our EX380 test engine, you set the test time as you like. Besides, you can make notes and do marks with EX380 test engine. With the notes, you will have a clear idea about your EX380 Exam Preparation. More practice make more perfect, so please take the EX380 exam preparation seriously. Your dreams will come true if you pass the EX380 exam certification. Trust RedHat EX380 exam dumps, you will never fail.

Reliable EX380 Test Duration: <https://www.practicetorrent.com/EX380-practice-exam-torrent.html>

RedHat EX380 Real Dumps Study material verified by RedHat Experts, Have you heard about our EX380 practice test: Red Hat Certified Specialist in OpenShift Automation and Integration, The on-sale EX380 test engine is the latest research and development result that we aim at the characters of the latest real test questions of EX380 test dumps, RedHat Reliable EX380 Exam Syllabus You can totally rely on us!

Using the Store/Query Interface, You don't need to install or use any plugins or software to take the EX380 web-based practice exam, RedHat EX380 Real Dumps Study material verified by RedHat Experts.

2026 Pass-Sure 100% Free EX380 – 100% Free Reliable Exam Syllabus | Reliable Red Hat Certified Specialist in OpenShift Automation and Integration Test Duration

Have you heard about our EX380 practice test: Red Hat Certified Specialist in OpenShift Automation and Integration, The on-sale EX380 test engine is the latest research and development result that we aim at the characters of the latest real test questions of EX380 test dumps.

You can totally rely on us, Over 50% of the EX380 account executives and directors have been with the Group for more than ten years.
