DevOps-SRE Exam is ideal for IT professionals who want to demonstrate their expertise in DevOps and SRE practices and take their careers to the next level.

Peoplecert PeopleCert DevOps Site Reliability Engineer (SRE) Sample Questions (Q32-Q37):

NEW QUESTION # 32

If SREs own some sections of a service, but not others, then this organizational approach is known as

- A. Consultant
- B. Platform
- C. Slice and dice
- D. Full SRE

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The Slice-and-Dice model is an SRE adoption pattern where the SRE team owns specific portions of a service-typically the most critical, complex, or high-risk components-while development teams own the rest.

From the SRE Workbook, Organizational Models section:

"In the slice-and-dice model, SREs take responsibility for particular portions of a service or system rather than owning the entire thing. This works well when parts of the system require stronger reliability engineering than others." This model is used when:

- * Services are large or complex
- * Only certain components need SRE-level reliability
- * Full SRE ownership is not feasible

Why the other options are incorrect:

- * A Consultant # SREs advise; they do not own components
- * B Full # SRE fully owns the entire service
- * D Platform # SRE builds shared reliability tooling, not owning service slices Thus, C. Slice and dice is the correct answer.

NEW QUESTION # 33

Which of the following is the BEST description of a customer reliability engineer (CRE)?

- A. They integrate with the customer's operations team to share responsibilities
- B. They take a software engineering approach to redesign allcloud services
- C. They use deep engineering expertise to improve the cloud provider's services
- D. They work with me cloud provider's SRE team to ship and build new features

Answer: C

NEW QUESTION # 34

Who codifies software-defined networks (SDNs) and applies SDLC principles to build, test and deploy network changes?

- A. Customer Reliability Engineer
- B. Network Reliability Engineer (NRE)
- C. Database Reliability Engineer
- D. Site Reliability Engineer (SRE)

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

A Network Reliability Engineer (NRE) is a specialized reliability role focused on applying SRE practices to networking. They use software engineering, SDLC concepts, and automation to manage networks at scale, including SDNs.

Google describes NRE as:

"Network Reliability Engineering applies SRE principles to network management, treating network configuration as code and automating changes safely."

- Google Reliability Engineering Guidance

Responsibilities include:

- * Codifying SDN configurations
- * Automating network deployment
- * Testing network changes through CI/CD
- * Reducing network-related outages

Thus, the correct answer is B.

NEW QUESTION # 35

Which scenario BEST illustrates the swarming concept used during incident management?

- A. A group of specialist teams meet and review a queue of escalated incidents to determine who should work on which one
- B. A mid-level support team continually monitors escalated incidents to assigned teams to ensure they are making progress
- C. An incident analyst rote escalates by assessing a consolidated list of next-level support teams and their area of expertise
- D. A high-level specialist support team constantly reviews their incoming incident queue to respond instantly to escalations

Answer: A

NEW QUESTION # 36

What does the Westrum model study?

- A. The flow of critical resources necessary to recover in the event of a major incident
- B. The flow of communication and how it affects organizational design
- C. The flow of information and how it affects organizational culture
- D. The flow of technology in order to deploy faster and more frequently

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The Westrum Organizational Culture Model categorizes organizations based on how effectively they allow information to flow, particularly in high-risk and high-performance environments. This model is widely referenced in SRE and DevOps practices and is cited by Google in their SRE culture guidance.

The Westrum model identifies three culture types:

- * Pathological (power-oriented)
- * Bureaucratic (rule-oriented)
- * Generative (performance-oriented)

From the SRE Workbook and Google's DevOps Research (DORA):

"The Westrum model is a taxonomy of organizational cultures based on how information flows. Generative cultures-with high cooperation and open information flow-correlate with higher reliability and better outcomes." Why the other options are incorrect:

- * A Deployment frequency is a DORA metric, not Westrum's focus.
- * C Resource flow is unrelated to Westrum
- * D While communication affects design, Westrum specifically studies information flow as a cultural health indicator, not structural design.

Thus, the correct answer is B.
