**2026 AWS-SysOps Practice Questions - Trustable Amazon New AWS-SysOps
Braindumps Files: AWS Certified SysOps Administrator - Associate**

The essential method to solve these problems is to have the faster growing speed than society developing. In a field, you can try to get the Amazon certification to improve yourself, for better you and the better future. With it, you are acknowledged in your profession. The AWS-SysOps exam torrent can prove your ability to let more big company to attention you. Then you have more choice to get a better job and going to suitable workplace. And our AWS-SysOps Exam Questions are famous for its good quality and high pass rate of more than 98%. You should have a try on our AWS-SysOps study guide.

Amazon AWS Certified SysOps Administrator - Associate Sample Questions (Q765-Q770):

NEW QUESTION # 765

A user is trying to connect to a running EC2 instance using SSH. However, the user gets an Unprotected Private Key File error. Which of the below mentioned options can be a possible reason for rejection?

- A. The ppk file used for SSH is read only
- B. The user has provided the wrong user name for the OS login
- C. The private key file has the wrong file permission
- D. The public key file has the wrong permission

Answer: C

Explanation:

Explanation

While doing SSH to an EC2 instance, if you get an Unprotected Private Key File error it means that the private key file's permissions on your computer are too open. Ideally the private key should have the Unix permission of 0400. To fix that, run the command:

```
chmod 0400 /path/to/private.key
```

NEW QUESTION # 766

What does the "configure" command allow an Administrator to do when setting up the AWS CLI? (Select TWO.)

- A. Choose the default EC2 instance.
- B. Designate the default region.
- C. Designate the format of the response to CLI commands.
- D. Encrypt the CLI commands.
- E. Decide which VPC to create instances in.

Answer: B,C

NEW QUESTION # 767

A user has setup a VPC with CIDR 20.0.0.0/16.

The VPC has a private subnet (20.0.1.0/24. and a public subnet (20.0.0.0/24..

The user's data centre has CIDR of 20.0.54.0/24 and 20.1.0.0/24.

If the private subnet wants to communicate with the data centre, what will happen?

- A. It will allow traffic with data centre on CIDR 20.1.0.0/24 but does not allow on 20.0.54.0/24
- B. It will not allow traffic with data centre on CIDR 20.1.0.0/24 but allows traffic communication on 20.0.54.0/24
- C. It will allow traffic communication on both the CIDRs of the data centre
- D. It will not allow traffic communication on any of the data centre CIDRs

Answer: A

Explanation:

VPC allows the user to set up a connection between his VPC and corporate or home network data centre. If the user has an IP address prefix in the VPC that overlaps with one of the networks' prefixes, any traffic to the network's prefix is dropped. In this case CIDR 20.0.54.0/24 falls in the VPC's CIDR range of 20.0.0.0/16. Thus, it will not allow traffic on that IP. In the case of 20.1.0.0/24, it does not fall in the VPC's CIDR range. Thus, traffic will be allowed on it.

NEW QUESTION # 768

A SysOps Administrator is writing a utility that publishes resources from an AWS Lambda function in AWS account A to an Amazon S3 bucket in AWS Account

B. The Lambda function is able to successfully write new objects to the S3 bucket, but IAM users in Account B are unable to delete objects written to the bucket by Account A.

Which step will fix this issue?

- A. Disable server-side encryption for objects written to the S3 bucket by the Lambda function.
- B. Add s3:Deleteobject permission to the IAM execution role of the AWS Lambda function in Account A.
- **C. Call the S3:PutObjectAcl API operation from the Lambda function in Account A to specify bucket owner, full control.**
- D. Change the bucket policy of the S3 bucket in Account B to allow s3:Deleteobject permission for Account A.

Answer: C

NEW QUESTION # 769

A company uses an AWS CloudFormation template to provision an Amazon EC2 instance and an Amazon RDS DB instance. A SysOps administrator must update the template to ensure that the DB instance is created before the EC2 instance is launched.
