

100% Pass HP - Unparalleled HPE7-A01 Reliable Test Prep

What's more, part of that DumpsReview HPE7-A01 dumps now are free: <https://drive.google.com/open?id=1DCYdukGa5PtRullovCAI-sZd00JJ3x-c>

There may be a lot of people feel that the preparation process for HPE7-A01 exams is hard and boring, and hard work does not necessarily mean good results, which is an important reason why many people are afraid of examinations. Today, our HPE7-A01 Exam Materials will radically change this. High question hit rate makes you no longer aimless when preparing for the exam, so you just should review according to the content of our HPE7-A01 study guide prepared for you.

HPE7-A01 certification exam is ideal for network professionals who are interested in deploying and managing Aruba wireless solutions in enterprise environments. Aruba Certified Campus Access Professional Exam certification provides a comprehensive understanding of Aruba WLAN solutions and prepares individuals to design, implement and manage Aruba wireless networks.

HP HPE7-A01 exam, also known as the Aruba Certified Campus Access Professional (ACCA) exam, is designed to test the knowledge and skills of IT professionals who work with Aruba products and solutions. Aruba Certified Campus Access Professional Exam certification validates a professional's ability to design, deploy, and support secure and reliable wireless networks using Aruba solutions. HPE7-A01 Exam covers topics such as networking fundamentals, wireless LAN design, troubleshooting, and security.

HPE7-A01 Reliable Test Prep & Guaranteed HP HPE7-A01 Exam Success with Updated HPE7-A01 Reliable Study Guide

With all HPE7-A01 practice questions being brisk in the international market, our HPE7-A01 exam materials are quite catches with top-ranking quality. But we do not stop the pace of making advancement by following the questions closely according to exam. So our experts make new update as supplementary updates. So that our HPE7-A01 study braindumps are always the latest for our loyal customers and we will auto send it to you as long as we update it.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q12-Q17):

NEW QUESTION # 12

The administrator notices that wired guest users that have exceeded their bandwidth limit are not being disconnected Access Tracker in ClearPass indicates a disconnect CoA message is being sent to the AOS-CX switch.

An administrator has performed the following configuration

What is the most likely cause of this issue?

- A. There is a mismatch between the RADIUS secret on the switch and CPPM.
- B. The SSL certificate for CPPM has not been added as a trust point on the switch
- C. There is a time difference between the switch and the ClearPass Policy Manager
- D. Change of Authorization has not been globally enabled on the switch

Answer: D

Explanation:

Explanation

Change of Authorization (CoA) is a feature that allows ClearPass Policy Manager (CPPM) to send messages to network devices such as switches to change the authorization state of a user session. CoA requires that both CPPM and the network device support this feature and have it enabled. For AOS-CX switches, CoA must be globally enabled using the command `radius-server coa`

enable. If CoA is not enabled on the switch, the disconnect CoA message from CPPM will be ignored and the user session will not be terminated. References:

NEW QUESTION # 13

You are configuring an SVI on an Aruba CX switch that needs to have the following characteristics:

* VLANID = 25

. IPv4 address 10.105.43.1 with mask 255.255.255.0

* IPv6 address fd00:5780::f02d:4df6 with a 64 bit prefix length

* member of VRF eng

* VRF eng and VLAN 25 have not yet been created

Which command lists will satisfy the requirements with the least number of commands?

- A. ☐
- B. ☐
- C. ☐
- D. ☒

Answer: D

Explanation:

The other options either use more commands or do not create the VRF or the VLAN.

Option C uses the following commands:

vrf eng: This command creates a VRF named eng and enters the VRF configuration mode1.

vlan 25: This command creates a VLAN with ID 25 and enters the VLAN configuration mode2.

interface vlan 25: This command creates an SVI on VLAN 25 and enters the interface configuration mode3.

ip address 10.105.43.1/24 ipv6 address fd00:5780::f02d:4df6/64 vrf attach eng: This command assigns an IPv4 address of 10.105.43.1 with a subnet mask of 255.255.255.0 and an IPv6 address of fd00:5780::f02d:4df6 with a prefix length of 64 to the SVI, and attaches it to the VRF eng.

NEW QUESTION # 14

You need to configure an ACL on an Aruba switch to block HTTP traffic but allow HTTPS. Which of the following ACL rules accomplishes this?

- A. deny tcp any any eq 443; permit tcp any any eq 80
- B. permit tcp any any neq 80
- C. permit tcp any any eq 443; deny tcp any any eq 80
- D. deny tcp any any eq 80; permit tcp any any eq 443

Answer: D

NEW QUESTION # 15

The customer needs a network hardware refresh to replace an aging Aruba 5406R core switch pair using spanning tree configuration with Aruba CX 8360-32YC switches. What is the benefit of VSX clustering with the new solution?

- A. faster MSTP converge processing
- B. stacked data-plane
- C. dual Aruba AP LAN port connectivity for PoE redundancy
- D. dual control plane provides better resiliency

Answer: D

Explanation:

Explanation

VSX clustering is a feature that allows two Aruba CX switches to operate as a single logical device, providing high availability, scalability, and simplified management. VSX clustering has several benefits over spanning tree configuration, such as:

* Dual control plane provides better resiliency. Unlike stacking, where switches share a single control plane, VSX switches have

independent control planes that synchronize their states over an inter-switch link (ISL). This means that if one switch fails or reboots, the other switch can continue to operate without affecting traffic flows or network services.

* Active-active forwarding provides better performance. Unlike spanning tree, where some links are blocked to prevent loops, VSX switches use all available links for forwarding traffic, providing load balancing and increased bandwidth utilization.

* Multichassis LAG provides better redundancy. Unlike single-chassis LAG, where all member ports belong to one switch, VSX switches can form multichassis LAGs with downstream or upstream devices, where member ports are distributed across both switches. This provides link redundancy and seamless failover in case of switch or port failure.

NEW QUESTION # 16

You are proposing new CX 8360 VSX switches to replace a customer's existing core switches.

The customer is concerned about the possibility of a split-brain scenario between the VSX pair.

How is the VSX pair affected when the ISL is down and keepalive is up?

- A. The VSX pair is out-of-sync.
- B. The VSX pair nodes are still forwarding traffic.
- C. The VSX pair is not at risk.
- D. The VSX LAGs are in a degraded state.

Answer: C

NEW QUESTION # 17

.....

If you want to use our HPE7-A01 simulating exam on your phone at any time, then APP version is your best choice as long as you have browsers on your phone. Of course, some candidates hope that they can experience the feeling of exam when they use the HPE7-A01 learning engine every day. Then our PC version of our HPE7-A01 Exam Questions can fully meet their needs only if their computers are equipped with windows system. As we face with phones and computers everyday, these two versions are really good.
