P.S. Free 2026 Palo Alto Networks NGFW-Engineer dumps are available on Google Drive shared by TestkingPass:
<https://drive.google.com/open?id=1jxlOZfl55VcFXcs45jscgr5DamKue59b>

Our NGFW-Engineer study materials are closely linked with the test and the popular trend among the industries and provide all the information about the test. The answers and questions seize the vital points and are verified by the industry experts. Diversified functions can help you get an all-around preparation for the test. Our online customer service replies the clients' questions about our NGFW-Engineer Study Materials at any time. So our NGFW-Engineer study materials can be called perfect in all aspects.

The top features of TestkingPass NGFW-Engineer exam questions are the availability of Palo Alto Networks certification exam in three different formats, real, valid, and updated NGFW-Engineer exam questions, subject matter experts verified NGFW-Engineer Exam Questions, free demo download facility, 1 year updated NGFW-Engineer exam questions download facility, affordable price and 100 percent Palo Alto Networks NGFW-Engineer exam passing money back guarantee.

Practice NGFW-Engineer Exam, NGFW-Engineer Exam Tutorial

The fact that Palo Alto Networks NGFW-Engineer questions are available in three different formats enables users to prepare according to their styles. To test out the NGFW-Engineer study material, you can download a free Palo Alto Networks NGFW-Engineer demo from TestkingPass. You receive 1 year of free NGFW-Engineer Questions updates and 24-hour customer service. To avoid disappointment and failure, purchase NGFW-Engineer exam preparation material and begin your Palo Alto Networks

Palo Alto Networks Next-Generation Firewall Engineer Sample Questions (Q85-Q90):

NEW QUESTION # 85

What are two valid zone types that can be selected from the zone configuration menu, per Palo Alto Networks best practices? (Choose two answers)

- A. Layer 3
- B. Management
- C. Layer 2
- D. DMZ

Answer: A,C

Explanation:

In the Palo Alto Networks PAN-OS environment, a Security Zone is a logical grouping of interfaces that allows for the application of security policies based on the network's topology and security requirements.

When navigating to the zone configuration menu, an administrator must define the Type of the zone, which dictates how the firewall processes traffic and which types of interfaces can be associated with it.

The primary valid zone types available in the configuration menu include Layer 3, Layer 2, Virtual Wire, Tap, and Tunnel.

* Layer 3 (Option A): This is the most common zone type. It is used when the firewall acts as a routing hop. Interfaces in a Layer 3 zone have IP addresses assigned and participate in routing tables.

* Layer 2 (Option B): This type is used when the firewall is integrated into a switched environment where it performs inspection without acting as a router. Traffic is switched between interfaces within the same Layer 2 zone based on MAC addresses.

It is important to note that while Management and DMZ are common terms in networking, they are not technical "types" in the zone configuration menu. "Management" refers to a dedicated physical port for administrative access (which typically does not belong to a security zone for transit traffic), and "DMZ" is a functional role or name given to a zone (usually of the Layer 3 type) rather than a selectable architectural type.

NEW QUESTION # 86

A security team wants to block peer-to-peer file sharing applications even when those applications attempt to evade detection by using non-standard ports.

Which NGFW capability enables this control?

- A. QoS traffic shaping
- B. Application signature and behavior analysis
- C. Static access control lists
- D. Port-based access control

Answer: B

Explanation:

NGFWs analyze traffic patterns and application signatures, allowing them to detect and block applications regardless of port usage.

NEW QUESTION # 87

By default, which type of traffic is configured by service route configuration to use the management interface?

- A. IPSec tunnel
- B. Virtual system (VSYS)
- C. Autonomous Digital Experience Manager (ADEM)
- D. Security zone

Answer: A

Explanation:

In PAN-OS service route configuration, IPSec tunnel-related traffic (such as IKE/IPSec control-plane communication) is, by

default, sourced from the management interface unless explicitly overridden.

This includes:

- IKE negotiation traffic
- IPSec tunnel establishment and maintenance traffic

NEW QUESTION # 88

When creating a Log Forwarding profile on a PAN-OS firewall to direct logs to various external and internal systems, which set of methods is available?

- A. HTTP, RADIUS, SNMP
- **B. Panorama/Cloud logging, email, Syslog**
- C. Email, Syslog, NetFlow
- D. Syslog, Panorama, SD-WAN

Answer: B

Explanation:

Log Forwarding profiles in PAN-OS support forwarding logs to Panorama or cloud logging services, sending notifications via email, and exporting logs to external systems using Syslog, which together form the supported log forwarding mechanisms for centralized management and integration.

NEW QUESTION # 89

A large organization has separate production and development environments, each with its own set of firewalls managed by Panorama. The organization uses Cloud Identity Engine (CIE) to consolidate user identities from Active Directory (AD) and Okta. A security mandate requires that development firewalls must only learn about "DEV" and "QA" user groups, while production firewalls should only see "Prod" user groups.

How can an administrator enforce this separation using CIE with minimal complexity?

- A. Create filters using CLI commands to filter "Prod," "DEV," and "QA" groups.
- **B. Create two segments, one with only "DEV" and "QA" groups, and one with "Prod" groups. Redistribute each segment to the corresponding group of firewalls.**
- C. Redistribute all user and group information to all firewalls and use Panorama Device Group hierarchy to apply different Group Mapping profiles.
- D. Configure two separate CIE instances, one for production and the other for development. Sync each instance to both AD and Okta.

Answer: B

Explanation:

Cloud Identity Engine supports segmentation of identity data, allowing administrators to create separate segments containing only specific user groups and redistribute each segment selectively to the appropriate firewalls, which enforces strict identity visibility separation between development and production environments with minimal configuration complexity.

NEW QUESTION # 90

.....

If you prefer to practice your NGFW-Engineer training materials on paper, then our NGFW-Engineer exam dumps will be your best choice. NGFW-Engineer PDF version is printable, and you can print them into hard one, and you can take them with you, and you can also study them anywhere and any place. Besides, NGFW-Engineer test materials are compiled by professional expert, therefore the quality can be guaranteed. You can obtain the download link and password for NGFW-Engineer exam materials within ten minutes, and if you don't receive, you can contact us, and we will solve this problem for you.
