Alle Menschen haben ihre eigenes Ziel, aber wir haben ein gleiches Ziel, dass Sie Salesforce Analytics-Con-301 Prüfung bestehen. Dieses Ziel zu erreichen ist vielleicht nur ein kleiner Schritt für Ihre Entwicklung im IT-Gebiet. Aber es ist der ganze Wert unserer Salesforce Analytics-Con-301 Prüfungssoftware. Wir tun alles was wir können, um die Prüfungsaufgaben zu erweitern. Und die Prüfungsunterlagen werden von unsere IT-Profis analysiert. Dadurch können Sie unbelastet und effizient benutzen. Um zu garantieren, dass die Salesforce Analytics-Con-301 Unterlagen, die Sie benutzen, am neuesten ist, bieten wir einjährige kostenlose Aktualisierung.

Per DeutschPrüfung können Sie die neuesten Fragen und Antworten zur Salesforce Analytics-Con-301 Zertifizierungsprüfung bekommen. Bitte kaufen Sie die Produkte schnell, so dass Sie die Prüfung zum ersten mal bestehen können. Zur Zeit besitzt nur PassTest die kürzlich aktualisierten Salesforce Analytics-Con-301 Prüfungsfragen und Antworten .

Analytics-Con-301 Deutsche, Analytics-Con-301 Prüfung

100% Garantie Salesforce Certified Tableau Consultant Prüfungserfolg, Wenn Sie DeutschPrüfung Analytics-Con-301 Prüfung wählen Salesforce DeutschPrüfung Test Engine ist das perfekte Werkzeug, um auf die Zertifizierungsprüfung vorbereiten. Erfolg kommt einfach, wenn Sie bereiten mit Hilfe von Original bis zu Salesforce Certified Tableau Consultant Produkte mit DeutschPrüfung Datum. Wie ein seltener Fall, wenn Sie es versäumen, diese Prüfung geben wir Ihnen eine volle Rückerstattung Ihres Einkaufs passieren.

Salesforce Analytics-Con-301 Prüfungsplan:

Thema	Einzelheiten

Thema 1	• Business Analysis: This section of the exam measures skills of Tableau Consultants focusing on evaluating the current state of analytics within an organization. It covers mapping business needs to Tableau capabilities, translating analytical requirements to best practices in Tableau, and recommending appropriate deployment options like Tableau Server or Tableau Cloud. It also includes evaluating existing data structures for supporting business needs and identifying performance risks and opportunities.
Thema 2	• Business Consulting: For Tableau Consultants, this section involves designing and troubleshooting calculations and workbooks to meet advanced analytical use cases. It covers selecting appropriate chart types, applying Tableau's order of operations in calculations, building interactivity into dashboards, and optimizing workbook performance by resolving resource-intensive queries and other design-related issues.
Thema 3	• Data Management: This part focuses on establishing governance and support for published content. Tableau Consultants are expected to manage data security, publish and maintain data sources and workbooks, and oversee content access. It includes applying governance best practices, using metadata APIs, and supporting administration functions to maintain data integrity and accessibility.
Thema 4	• IT Management: This domain measures skills related to managing Tableau environments. It includes planning server upgrades, recommending deployment solutions (on-premise or cloud), and ensuring alignment between technical and business requirements for analytics infrastructure. It also involves troubleshooting and optimizing system performance relevant to Tableau Server and Cloud deployments.

Salesforce Certified Tableau Consultant Analytics-Con-301 Prüfungsfragen mit Lösungen (Q17-Q22):

17. Frage

A client has a database that stores widget inventory by day and it is updated on a nonstandard schedule as shown below.

They want a data visualization that shows widget inventory daily, however their business unit does not have the ability to modify the data warehouse structure.

What should the client do to achieve the desired result?

- A. Update the Widget Inventory Table to be a daily snapshot.
- B. Use Tableau Desktop to visualize null values.
- **C. Use Tableau Prep to add new rows.**
- D. Create a temporary table in the database.

Antwort: C

Begründung:

For a client who needs a daily visualization of widget inventory but cannot modify the data warehouse structure, the best approach is to use Tableau Prep to add new rows. Tableau Prep can be used to manipulate the existing dataset by adding missing date entries and appropriately adjusting inventory counts based on available data. This allows the creation of a complete daily snapshot for visualization without needing changes to the underlying database structure.

18. Frage

A client is searching for ways to curate and document data in order to obtain data lineage. The client has a data source connected to a data lake.

Which tool should the consultant recommend to meet the client's requirements?

- A. Tableau Catalog without Tableau Data Management Add-on
- **B. Tableau Catalog with Tableau Data Management Add-on**
- C. Tableau Catalog with Tableau Server Management Add-on
- D. Tableau Prep Conductor

Antwort: B

Begründung:

To effectively curate and document data for obtaining data lineage, particularly from a data source connected to a data lake, the

recommended tool is:

- * Tableau Catalog with Tableau Data Management Add-on: This add-on enhances the capabilities of Tableau Catalog, providing extensive features for data management, including detailed data lineage, impact analysis, and metadata management.

- * Functionality: The Tableau Catalog with the Data Management Add-on allows users to see the full history and lineage of the data, trace its usage across all Tableau content, and understand dependencies.

It also facilitates better governance and transparency in data handling.

- * Why Choose this Tool: For a client needing comprehensive data lineage and documentation capabilities, this add-on ensures that data stewards and users can maintain and utilize a well-managed data environment. It supports robust data governance practices necessary for large and complex data ecosystems like those typically associated with data lakes.

References

The recommendation is based on the functionalities offered by the Tableau Data Management Add-on, as described in Tableau's official documentation on managing and documenting data sources for enhanced governance and operational efficiency.

19. Frage

A Tableau consultant tasked with evaluating a data structure is handed the below sample dataset.

Which two statements are true about the dataset? Choose two.

☐

- A. The data structure will require a lot of maintenance, as maintenance will need to be done to handle a new column for a new year.
- B. The data can be pivoted in order to enable a year selector.
- C. The data needs to be denormalized before it can be used.
- D. The names of the columns are accurate and indicate what the data values actually mean.

Antwort: A,B

Begründung:

The dataset shown is a classic "wide" format":

- * A single row per state

- * Separate columns for each year: 2019, 2020, 2021, 2022, 2023, 2024

Tableau's documentation on data structure and pivoting explains:

Why A is TRUE

Tableau documentation identifies wide datasets (multiple columns representing categories such as years, months, or similar time periods) as high-maintenance structures because:

- * For every new year, a new column must be added.

- * Metadata and calculations must be updated each time.

- * This type of structure is described as having poor scalability and higher maintenance.

This dataset fits that exact description, so A is correct.

Why C is TRUE

According to Tableau's "Pivot Data from Columns to Rows" section:

- * Wide datasets can and should often be pivoted so that repeated columns (such as year columns) become rows.

- * Pivoting enables dynamic capabilities such as:

- * Year filters (year selector)

- * Time-series analysis

- * Consistent aggregations

- * Simplified calculations

Pivoting this dataset would produce:

State

Year

Value

Alabama

2019

2300.39

Alabama

2020

3030.39

...

...

...

This makes the dataset tall and tidy, which Tableau identifies as better for analysis and dashboard interactivity.

Therefore, C is correct.

Why B is FALSE

The column names (2019, 2020, 2021...) are simply numbers.

Tableau documentation stresses that good metadata includes descriptive column names.

These column names:

- * Do not indicate what the measure represents (Revenue? Sales? Population?)

- * Only show the year, not the meaning of the metric

Thus they are not considered accurate or descriptive column names.

Why D is FALSE

The dataset is already denormalized, not normalized.

Denormalized data means combining multiple attributes (like multiple years) into one table, which is exactly what this dataset already does.

Tableau documentation explains that wide data is already denormalized, and the recommended fix is pivoting, not further denormalization.

Therefore, D is incorrect.

20. Frage

SIMULATION

From the desktop, open the CC workbook.

Open the City Pareto worksheet.

You need to complete the Pareto chart to show the percentage of sales compared to the percentage of cities. The chart must show reference lines to visualize how the data compares to the Pareto principle.

From the File menu in Tableau Desktop, click Save.

Antwort:

Begründung:

See the complete Steps below in Explanation

Explanation:

To complete the Pareto chart in the "City Pareto" worksheet of your Tableau Desktop and add reference lines to illustrate how the data compares to the Pareto principle, follow these steps:

Open the CC Workbook and Access the Worksheet:

From the desktop, double-click on the CC workbook to open it in Tableau Desktop.

Navigate to the City Pareto worksheet by selecting its tab at the bottom of the window.

Construct the Pareto Chart:

Ensure that sales data is aggregated by city. If not, drag the 'City' dimension to the Columns shelf and the 'Sales' measure to the Rows shelf.

Sort the sales data in descending order to properly align the cities according to their sales contribution.

To create a running total of sales, right-click on the 'Sales' measure on the Rows shelf, select 'Quick Table Calculation', and choose 'Running Total'.

Drag the 'Number of Records' field to the Rows shelf next to the Sales running total. Right-click on it, select 'Quick Table Calculation', and choose 'Running Total'. Set its calculation to 'Percent of Total' from the 'Edit Table Calculation' option to represent the percentage of cities.

Add Reference Lines for the Pareto Principle:

Click on the Analytics tab in the sidebar.

Drag a 'Reference Line' element and drop it onto the chart area.

Set the Reference Line for the Sales axis at 80% to represent the typical Pareto cutoff where 80% of effects come from 20% of causes.

Add another Reference Line on the axis representing the percentage of cities, set at 20%, to visually assess the Pareto principle.

Adjust the Appearance of the Chart:

Format the reference lines by right-clicking on them, selecting 'Edit', and choosing a distinct style or color to make them stand out.

Ensure the chart is clear and labels are appropriately adjusted for easy understanding of the data visualization.

Save Your Changes:

From the File menu, click 'Save' to ensure all your changes are stored.

References:

Tableau Help: Offers detailed guidance on creating Pareto charts and adding reference lines.

Tableau Visualization Best Practices: Provides tips on effectively displaying cumulative data and principles such as Pareto.

By following these steps, you will have successfully enhanced the City Pareto worksheet to include a complete Pareto chart with reference lines that illustrate how the sales data compares to the Pareto principle, making it easier to analyze and communicate the distribution of sales across cities.

21. Frage

A client's fiscal calendar runs from February 1 through January 31.

How should the consultant configure Tableau to use the client's fiscal calendar when building date charts?

- A. Edit the data source and set the Fiscal Year in the data preview window.
- B. Right click on the Date axis in charts and select Use Fiscal Calendar.
- **C. Edit the data source Date Properties, then update the Default Properties of the Date Fields.**
- D. Create Calculated Fields using the FISCALQUARTER() and FISCALYEAR() functions.

Antwort: C

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

Tableau allows fiscal calendars to be defined at the data source level, affecting how all date fields behave across the workbook.

According to Tableau documentation:

- * Fiscal calendars must be set using Data Source Date Properties.
- * Once set, this becomes a default property for all date fields unless overridden.
- * This allows charts, hierarchies, and date parts to automatically follow the fiscal year starting in February.

Correct procedure:

- * Go to Data Source.
- * Open Date Properties.
- * Set Fiscal Year Start = February.
- * (Optional) Adjust Date Field Default Properties.

This ensures all charts and date hierarchies use the fiscal calendar automatically.

Why the other options are incorrect:

A). Right-click on axis # Use Fiscal Calendar

This option does not exist in Tableau.

B). Set Fiscal Year in Data Preview

Not supported; fiscal configuration isn't made in the preview window.

C). Use FISCALYEAR() / FISCALQUARTER()

This is manual, requires custom fields, and does not configure Tableau's built-in fiscal calendar system.

This is more work and not the correct method.

Only Option D configures the fiscal calendar globally and correctly.

- * Tableau Date Properties documentation specifying fiscal year settings.
- * Default Properties configuration for date fields.
- * Official guidance for implementing fiscal calendars.

22. Frage

.....

Ist es nicht einfach, die Salesforce Analytics-Con-301 Zertifizierungsprüfung zu bestehen? Es ist sehr wahrscheinlich, Prüfung einmalig zu bestehen, wenn Sie die Fragenkataloge zur Salesforce Analytics-Con-301 aus DeutschPrüfung wählen.
