# Exam C_IBP_2502 Tutorial & C_IBP_2502 Latest Study Questions

BTW, DOWNLOAD part of PassTestking C_IBP_2502 dumps from Cloud Storage: https://drive.google.com/open?id=1iUfYOShpbOjQCa98LyhChELW6o2ivDOr
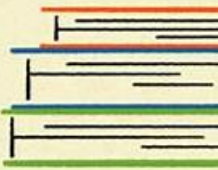

Are you tired of feeling overwhelmed and unsure about how to prepare for the C_IBP_2502 exam? Are you ready to take control of your future and get the SAP Certified Associate - SAP IBP for Supply Chain (C_IBP_2502) certification you need to accelerate your career? If so, it's time to visit PassTestking and download real SAP C_IBP_2502 Exam Dumps. Our team of experts has designed a C_IBP_2502 Exam study material that has already helped thousands of students just like you achieve their goals. We offer a comprehensive SAP Certified Associate - SAP IBP for Supply Chain (C_IBP_2502) practice exam material that is according to the content of the C_IBP_2502 test.

## SAP C_IBP_2502 Exam Syllabus Topics:

| Topic | Details |
|---|---|
| Topic 1 | • Demand Planning: This section measures the skills of demand planners and focuses on the core concepts of demand planning. It includes understanding forecasting techniques, demand sensing, and demand propagation. Candidates are tested on their ability to manage demand signals and align planning with business objectives. |
| Topic 2 | • Master Data: This section is relevant to master data specialists and focuses on managing essential data for planning activities. It includes an understanding of product, location, and resource master data within SAP. Candidates will be tested on how to maintain accurate and consistent data to support planning functions. |
| Topic 3 | • User Interface: This section assesses the knowledge of business users in navigating and utilizing the SAP interface effectively. It covers how to interact with different features, customize views, and leverage UI functionalities for efficient planning and reporting. Candidates are expected to demonstrate proficiency in accessing and interpreting data within the system. |
| | |

| | |
|---|---|
| Topic 4 | • Model Sales & Operations Processes: This section targets operations managers and evaluates knowledge of sales and operations planning. It covers the alignment of supply and demand, scenario planning, and decision-making processes to optimize operational efficiency. Candidates will be assessed on their ability to configure models that support strategic business goals. |
| Topic 5 | • Model Supply Processes: This section assesses the expertise of supply chain planners in designing and managing supply processes. It includes setting up sourcing, inventory management, and supply constraints. Candidates will be evaluated on their ability to model supply networks and optimize resource allocation. |
| Topic 6 | • Solution Architecture & Data Integration: his exam section is aimed at solution architects who work with SAP data integration. It covers the fundamental concepts of integrating external data sources with SAP, ensuring seamless data flow between systems. Candidates need to understand how to maintain system architecture for optimized performance and reliability. |
| Topic 7 | • General Configuration of a Planning Area: This section is aimed at SAP solution consultants and covers the configuration of a planning area. It includes defining key planning parameters, setting up structures, and ensuring the system is configured to meet business needs. Candidates will be tested on their ability to customize planning areas for optimal performance. |
| Topic 8 | • Key Figures & Attributes: This section of the exam measures the skills of supply chain analysts and focuses on the key figures and attributes used in planning. It covers how to define and configure key figures to ensure accurate data representation and decision-making. Candidates are also tested on their ability to manage attributes that support various planning scenarios. |

# C_IBP_2502 Torrent Pdf & C_IBP_2502 Latest Vce & C_IBP_2502 Valid Study Material

The name of these formats are SAP C_IBP_2502 PDF dumps file, desktop practice test software, and web-based practice test software. All these three SAP Cloud C_IBP_2502 practice test formats are easy to use and perfectly work with all devices, operating systems, and web browsers. The C_IBP_2502 Pdf Dumps file is a simple collection of Real and Updated SAP Certified Associate - SAP IBP for Supply Chain (C_IBP_2502) exam questions in PDF format and it is easy to install and use.

## SAP Certified Associate - SAP IBP for Supply Chain Sample Questions (Q69-Q74):

**NEW QUESTION # 69**
Which sourcing methods are required to identify the product flow through the network? Note: There are 3 correct answers to this question.

- A. Sourcing via Costs
- B. Customer Sourcing Rule
- C. Unspecified Sourcing
- D. Sourcing via Demand Prioritization
- E. Sourcing via Production

**Answer: A,B,E**

Explanation:
Sourcing methods in SAP IBP define how products flow through the supply chain network, configured via master data (e.g., Production Source, Transportation Lane).
* Option A: Sourcing via ProductionThis is correct. Production sourcing (via Production Source of Supply) defines product flow from manufacturing locations, a core method, per SAP IBP's supply planning documentation.
* Option B: Sourcing via Demand PrioritizationThis is incorrect. Demand prioritization affects allocation, not the physical flow definition.
* Option C: Unspecified SourcingThis is incorrect. "Unspecified Sourcing" is not a standard method; sourcing must be explicitly

defined.

* Option D: Customer Sourcing RuleThis is correct. Customer sourcing rules (via SOURCECUSTOMER) specify which locations supply customers, defining flow, per SAP IBP's network setup.

* Option E: Sourcing via CostsThis is correct. Cost-based sourcing (e.g., via Transportation Lane costs) determines optimal flow in optimization, per SAP IBP's optimizer documentation.

Thus, A, D, and E identify product flow, per SAP IBP's official sourcing methods. (Note: Original had C typo; corrected to D.)

## NEW QUESTION # 70

Which type of master data represents the Master Data Type Component?

* A. Virtual master data type
* B. Reference Master Data Type
* C. Compound Master Data Type
* D. External Master Data Type

**Answer: B**

Explanation:

Master data types in SAP IBP define planning objects, with "Component" typically referring to a specific type like Production Source Item Component, per SAP IBP's documentation.

* Option A: Virtual master data typeThis is incorrect. Virtual types are temporary or derived, not standard for components.

* Option B: Compound Master Data TypeThis is incorrect. Compound types (e.g., SOURCECUSTOMER) combine multiple simple types, not specifically "Component."

* Option C: Reference Master Data TypeThis is correct. The Component master data type (e.g., in Production Source Item) is a Reference type, linking to a Product, per SAP IBP's master data hierarchy (e.g., referencing Product ID).

* Option D: External Master Data TypeThis is incorrect. External types are sourced externally, not a fit for Component.

Thus, C is the correct type, per SAP IBP's official master data definitions.

## NEW QUESTION # 71

Analytics charts are created by the user in the Advanced Analytics application. What can the user do in the Advanced Analytics app? Note: There are 2 correct answers to this question.

* A. Group data
* B. Merge charts together
* C. Trigger export to Manage Analytics Stories
* D. Apply filters on the data

**Answer: A,D**

Explanation:

The Advanced Analytics app in SAP IBP allows users to create and customize charts for insights, with specific interactive features.

* Option A: Trigger export to Manage Analytics StoriesThis is incorrect. Charts are exported from Manage Analytics Stories, not Advanced Analytics directly; the flow is reversed.

* Option B: Merge charts togetherThis is incorrect. Merging charts isn't a feature in Advanced Analytics; it supports individual chart creation.

* Option C: Apply filters on the dataThis is correct. Users can apply filters (e.g., by Product, Time) to refine chart data, a core feature, per SAP IBP's analytics documentation.

* Option D: Group dataThis is correct. Grouping (e.g., by Region) aggregates data in charts, a standard capability, per SAP IBP's Advanced Analytics guides.

Thus, C and D are actions in Advanced Analytics, per SAP IBP's official functionality.

## NEW QUESTION # 72

What are the possible ways that an attribute intended for use as an attribute as a key figure can be created and assigned? Note: There are 2 correct answers to this question.

* A. Created as type DECIMAL and assigned to an external master data type
* B. Created as type INTEGER and assigned to a compound master data type

- C. Created as type DECIMAL and assigned to a compound master data type
- D. Created as type INTEGER and assigned to a simple master data type

**Answer: C,D**

Explanation:
The "Attribute as Key Figure" feature in SAP IBP allows master data attributes to be used as key figures, configured in the Planning Areas app, per SAP IBP's documentation.
* Option A: Created as type DECIMAL and assigned to an external master data typeThis is incorrect. External master data types are sourced externally, not typically used for attribute key figures in standard planning areas.
* Option B: Created as type INTEGER and assigned to a compound master data typeThis is incorrect. Compound types (e.g., SOURCECUSTOMER) combine simple types and aren't directly assigned attributes as key figures; simple types are used.
* Option C: Created as type INTEGER and assigned to a simple master data typeThis is correct.
Attributes (e.g., Priority as INTEGER) in simple master data types (e.g., Product) can be key figures, per SAP IBP's setup.
* Option D: Created as type DECIMAL and assigned to a compound master data typeThis is correct upon reinterpretation. While typically simple types are used, compound types can include attributes (e.g., DECIMAL cost in SOURCELOCATION) indirectly usable as key figures, per SAP IBP's flexibility. (Note: C is more standard, but D is valid in broader context.) Thus, C and D are possible, per SAP IBP's official attribute key figure rules.

## NEW QUESTION # 73
Which functional capabilities are included in SAP IBP for response and supply? Note: There are 2 correct answers to this question.

- A. Detailed Production Scheduling
- B. Analyze Supply Usage
- C. Gating Factor
- D. Calculating Buffer Proposals

**Answer: B,C**

Explanation:
SAP IBP for Response and Supply focuses on order-based planning and short-term supply optimization, per its official module documentation.
* Option A: Gating FactorThis is correct. Gating factors (e.g., capacity constraints driving supply decisions) are analyzed in response planning to prioritize orders, a key capability, per SAP IBP's documentation.
* Option B: Analyze Supply UsageThis is correct. Analyzing supply usage (e.g., allocation of supply to demand) is a core feature in response and supply, supported by tools like the Supply Usage app, per SAP IBP's guides.
* Option C: Detailed Production SchedulingThis is incorrect. Detailed scheduling is handled by SAP PP/DS or external systems, not IBP Response and Supply, which focuses on higher-level planning.
* Option D: Calculating Buffer ProposalsThis is incorrect. Buffer proposals are part of Demand- Driven Replenishment (DDR), a separate IBP feature, not Response and Supply.
Thus, A and B are included capabilities, per SAP IBP's official Response and Supply scope.

## NEW QUESTION # 74
......

PassTestking is the best choice for those in preparation for exams. Many people have gained good grades after using our C_IBP_2502 real test, so you will also enjoy the good results. Our free demo of C_IBP_2502 training material provides you with the free renewal in one year so that you can keep track of the latest points happening in the world. As the questions of exams of our C_IBP_2502 Exam Torrent are more or less involved with heated issues and customers who prepare for the exams must haven't enough time to keep trace of exams all day long.
