Quiz Palo Alto Networks - Professional Test PSE-Cortex-Pro-24 Voucher
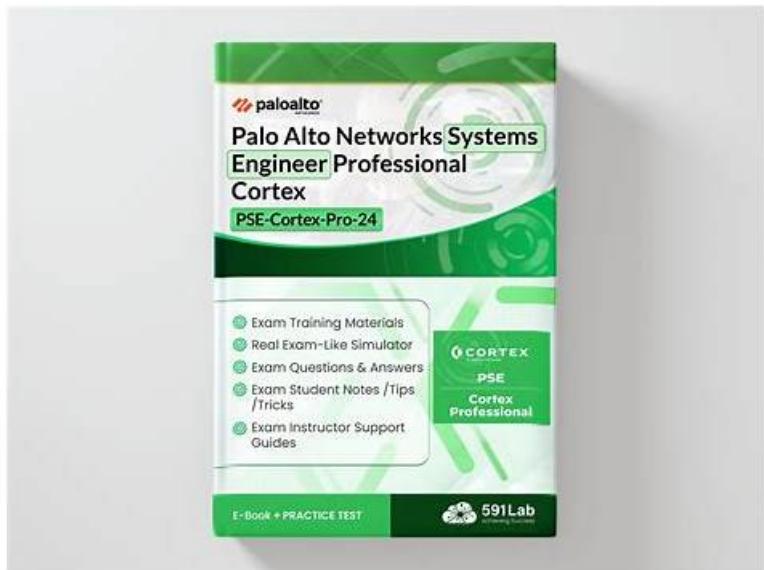

In this knowledge-dominated world, the combination of the knowledge and the practical working competences has been paid high attention to is extremely important. If you want to improve your practical abilities you can attend the PSE-Cortex-Pro-24 certificate examination. Passing the PSE-Cortex-Pro-24 Certification can prove that you boost both the practical abilities and the knowledge and if you buy our PSE-Cortex-Pro-24 latest question you will pass the PSE-Cortex-Pro-24 exam smoothly.

With the high class operation system, we can assure you that you can start to prepare for the PSE-Cortex-Pro-24 exam with our study materials only 5 to 10 minutes after payment since our advanced operation system will send the PSE-Cortex-Pro-24 exam torrent to your email address automatically as soon as possible after payment. Most important of all, as long as we have compiled a new version of the PSE-Cortex-Pro-24 Guide Torrent, we will send the latest version of our PSE-Cortex-Pro-24 training materials to our customers for free during the whole year after purchasing. We will continue to bring you integrated PSE-Cortex-Pro-24 guide torrent to the demanding of the ever-renewing exam, which will be of great significance for you to keep pace with the times.

If you want to constantly improve yourself and realize your value, if you are not satisfied with your current state of work, if you still spend a lot of time studying and waiting for PSE-Cortex-Pro-24 qualification examination, then you need our PSE-Cortex-Pro-24 material, which can help solve all of the above problems. I can guarantee that our study materials will be your best choice. Our PSE-Cortex-Pro-24 Study Materials have three different versions, including the PDF version, the software version and the online version, to meet the different needs, our products have many advantages, I will introduce you to the main characteristics of our PSE-Cortex-Pro-24 research materials.

Palo Alto Networks Systems Engineer Professional - Cortex Sample Questions (Q112-Q117):

NEW QUESTION # 112
What are the key capabilities of the ASM for Remote Workers module?

- A. Analyzing global scan data, identifying risky issues on remote networks, and providing internal insights
- B. Gathering endpoint data, conducting internal scans, and automating network configurations
- C. Identifying office network vulnerabilities, monitoring remote workforce, and encrypting data
- D. Monitoring endpoint activity, managing firewall rules, and mitigating cybersecurity threats

Answer: A

Explanation:
The ASM for Remote Workers module in Cortex Xpanse focuses on analyzing global scan data, identifying risky issues on remote networks, and providing internal insights. This helps organizations maintain visibility and control over the security of their remote workforce, ensuring that potential risks and vulnerabilities in remote network configurations are addressed proactively.

NEW QUESTION # 113

If you have a playbook task that errors out. where could you see the output of the task?

- A. Demisto Audit log
- B. /var/log/messages
- C. Playbook Editor
- D. War Room of the incident

Answer: D

NEW QUESTION # 114

What must a customer deploy prior to collecting endpoint data in Cortex XSIAM?

- A. XDR agent
- B. Playbook
- C. Broker VM
- D. External dynamic list

Answer: A

Explanation:

As a Palo Alto Cortex Professional, I'll provide a detailed explanation for Question 118: What must a customer deploy prior to collecting endpoint data in Cortex XSIAM? along with the reasoning and references based on Palo Alto Networks' official documentation and product knowledge.
C: XDR Agent
Cortex XSIAM (Extended Security Intelligence and Automation Management) is an AI-driven security operations platform designed to centralize and automate security operations across an enterprise, including endpoint, network, cloud, and identity data. To collect endpoint data specifically, Cortex XSIAM relies on the Cortex XDR Agent, which is a lightweight software component installed on endpoints (such as laptops, desktops, or servers). This agent is responsible for gathering telemetry data, monitoring endpoint activity, and enforcing security policies, which are then sent to the Cortex XSIAM cloud for analysis, detection, and response.
Here's why the XDR Agent is the correct choice and why the other options do not apply:
Option A: Playbook
* Explanation: A playbook in Cortex XSIAM (or its predecessor, Cortex XSOAR) is a predefined workflow that automates incident response tasks, such as investigating alerts or remediating threats.
While playbooks are critical for automation and orchestration, they are not involved in the initial collection of endpoint data.
Playbooks operate on data that has already been collected and ingested into the system. Therefore, deploying a playbook is not a prerequisite for collecting endpoint data.
* Conclusion: Incorrect.
Option B: Broker VM
* Explanation: The Broker VM is an optional component in the Cortex ecosystem that can be deployed to enhance connectivity and functionality, such as acting as a proxy for endpoints to communicate with the Cortex cloud, collecting logs, or running additional services. While it can facilitate data forwarding or log collection in certain scenarios (e.g., from third-party sources), it is not a mandatory requirement for collecting endpoint data directly from devices managed by Cortex XSIAM. The XDR Agent can communicate with the Cortex cloud independently without a Broker VM.
* Conclusion: Incorrect.
Option C: XDR Agent

* Explanation: The Cortex XDR Agent is the core component required to collect endpoint data in Cortex XSIAM. It is installed on supported endpoints (e.g., Windows, macOS, Linux, or Android devices) and performs several key functions:
* Data Collection: Gathers detailed telemetry, including process execution, file activity, network connections, and system events.
* Prevention: Blocks exploits, malware, and fileless attacks using AI-driven techniques.
* Detection and Response: Provides real-time data to the Cortex cloud for advanced analytics and incident investigation. Without the XDR Agent deployed on endpoints, Cortex XSIAM cannot collect the necessary data to monitor, detect, or respond to endpoint-based threats. This makes it the essential prerequisite for endpoint data collection.
* Conclusion: Correct.
Option D: External Dynamic List (EDL)
* Explanation: An External Dynamic List (EDL) is a feature in Palo Alto Networks' ecosystem used to import and manage dynamic lists of indicators (e.g., IP addresses, URLs, or domains) for use in security policies or threat intelligence. While EDLs can enhance threat detection by providing additional context, they are not involved in the process of collecting endpoint data. They are a supplementary tool rather than a requirement for data collection.
* Conclusion: Incorrect.
References from Palo Alto Networks:
* Cortex XSIAM Datasheet (Palo Alto Networks):
* "Cortex XSIAM unifies best-in-class security operations functions, including Endpoint Detection and Response (EDR)... The platform leverages the Cortex XDR Agent to prevent endpoint attacks and collect full telemetry for detection and response."
* This highlights the XDR Agent's role as the mechanism for endpoint data collection.
* Cortex XSIAM Solution Brief (Palo Alto Networks):
* "XSIAM requires the deployment of the XSIAM Endpoint Agent to appropriate and compatible endpoints to collect telemetry and enforce security."
* This directly ties the agent to the data collection process.
* Cortex XDR Agent Documentation (Palo Alto Networks Cortex Documentation Portal):
* The agent is described as "a lightweight agent that stops threats with Behavioral Threat Protection, AI, and cloud-based analysis while collecting endpoint telemetry for extended detection and response."
* Available at: docs-cortex.paloaltonetworks.com.
* What is Cortex XSIAM? (Palo Alto Networks Website):
* "Endpoint Protection Platform (EPP): Prevents endpoint attacks with a proven endpoint agent that blocks exploits, malware, and fileless attacks and collects full telemetry for detection and response."
* This reinforces the agent's foundational role in endpoint data collection.

NEW QUESTION # 115
In the DBotScore context field, which context key would differentiate between multiple entries for the same indicator in a multi-TIP environment?

- A. Brand
- B. Type
- C. Using
- D. Vendor

Answer: D

NEW QUESTION # 116
Which Cortex XDR Agent capability prevents loading malicious files from USB-connected removable equipment?

- A. Device Control
- B. Device Customization
- C. Agent Configuration
- D. Agent Management
