We also provide one year service warranty.

Salesforce Manufacturing Cloud Accredited Professional Exam Sample Questions (Q64-Q69):

NEW QUESTION # 64

Universal Containers (UC) is interested in using Manufacturing Cloud. During discovery, the business analyst identifies the following requirements:

1. UC needs the ability to set quantity and revenue targets at the manager level, and the manager needs the ability to distribute that

across each member of their team and their team's accounts.

2. UC needs the ability to visualize the targets compared to the actual order amounts for the accounts with targets.

3. UC needs the ability to forecast its sales on a rolling 12-month basis using a combination of data from opportunities, long-term agreements, past orders, and market data that is uploaded periodically.

Which combination of Manufacturing Cloud features addresses the requirements above?

- A. Account Manager Targets, Account Based Forecasting, CRM Analytics for Manufacturing App
- **B. Account Manager Targets, Sales Agreements, Advanced Account Forecasting**
- C. Account Manager Targets, Advanced Account Forecasting, CRM Analytics for Manufacturing App

Answer: B

Explanation:

Explanation

Account Manager Targets allow UC to set and track quantity and revenue targets at the manager level, and distribute them to their team members and accounts¹.

Sales Agreements allow UC to manage run-rate or long-term negotiated business with their customers, and track the order realization against the agreed terms¹.

Advanced Account Forecasting allow UC to forecast their sales on a rolling 12-month basis using data from opportunities, sales agreements, past orders, and market data¹.

CRM Analytics for Manufacturing App is a prebuilt app that provides insights into sales performance, account health, and customer satisfaction, but it does not address the requirements of UC².

Account Based Forecasting is a feature that allows UC to forecast their sales based on account hierarchy, but it does not use data from sales agreements or market data³.

NEW QUESTION # 65

Universal Containers (UC) is looking to improve visibility into its long-term agreements and forecasts. A business analyst has gathered UC's requirements and determined a few key requirements that they need compared to standard functionality.

1. UC tracks its long-term agreements by planned quantity and planned revenue at the product category level.

2. UC has a custom fiscal year and tracks its forecast weekly.

3. UC needs to see the ordered quantity, revenue, shipped quantity, and revenue in its forecast metrics. 4) The primary dimension in UC's forecasts is the product category.

What should be customized in Manufacturing Cloud to accomplish the business requirements?

- A. Sales Agreement Metrics
- B. Advanced Account Forecast Fact object
- **C. Data Processing Engine (DPE) Templates**

Answer: C

Explanation:

Data Processing Engine (DPE) Templates are used to customize the data model and calculations for account-based forecasting in Manufacturing Cloud. DPE Templates allow users to define the dimensions, metrics, and formulas for their forecasts based on their business needs. In this case, UC needs to customize the DPE Template to include the product category as a dimension, and the ordered quantity, revenue, shipped quantity, and revenue as metrics. UC also needs to specify the custom fiscal year and the weekly forecast frequency in the DPE Template. The other options are not relevant for this requirement. Sales Agreement Metrics are used to track the performance of sales agreements, not forecasts. Advanced Account Forecast Fact object is a standard object that stores the forecast data, not a customization option. Reference: Customize Data Processing Engine (DPE) Templates, Account-Based Forecasting in Manufacturing Cloud

NEW QUESTION # 66

A Salesforce Manufacturing cloud user finds that the current sales agreement data is not displaying in Tableau CRM for manufacturing. What two possibilities could cause this to happen?

- A. Sales agreements are only displayed in the grid

- B. The sales agreement was not added to the data flow
- C. The sales agreement data flow was not updated
- D. The sales agreement was linked to person accounts

Answer: B,C

Explanation:

Explanation

According to the Salesforce Manufacturing Cloud documentation, to display the current sales agreement data in tableau CRM for manufacturing, you need to add the sales agreement object to the data flow and update the data flow. The data flow is a set of instructions that defines how data is extracted, transformed, and loaded into the app. If you do not add the sales agreement object to the data flow, the app will not have access to the sales agreement data. If you do not update the data flow, the app will not reflect the latest changes in the sales agreement data1. NEW QUESTION # 67

What is the main function of out-of-the-box Data Processing Engine jobs in Rebate Management?

- A. It applies the benefit structure and creates payouts
- B. Query, extract, filter and aggregate journal transactions
- C. It includes custom metrics in the transaction journal
- D. Delete, add, clone and transform journal transactions.

Answer: B

Explanation:

Data Processing Engine (DPE) is a feature of Rebate Management that allows you to transform data that is available in your Salesforce org and write back the transformation results as new or updated records. You can use DPE to process data for standard and custom objects. Rebate Management has DPE templates that you can clone and customize to suit your business needs. The templates either help you to aggregate transactions by different criteria, or help you to manage other rebate processes. The out-of-the-box DPE jobs in Rebate Management use the templates to query, extract, filter and aggregate journal transactions based on the eligibility criteria and calculation definitions of the rebate types. The aggregated data is then stored in the Rebate Member Product Aggregate object, which is used to calculate the payouts for the program members. NEW QUESTION # 68

If the team member hierarchy type is changed in account manager targets, which statement is accurate?

- A. All the existing targets have to be reapproved based on the new hierarchy
- B. All the existing targets turn to draft status
- C. No change to existing targets
- D. All the existing targets become read only

Answer: D

Explanation:

Account manager targets are long-term goals that account managers set for themselves and their team members. They can be based on revenue, volume, margin, or any other metric that is relevant for the business. The team member hierarchy type determines the users that account managers can assign targets to. It can be either the manager hierarchy or the forecasts hierarchy, which are defined in the Roles and Forecasts Hierarchy pages in Setup, respectively. If the team member hierarchy type is changed in account manager targets, all the existing targets are made read-only, as a warning message indicates. This is to prevent any inconsistency or confusion in the target assignments and approvals. To edit the existing targets, account managers have to clone them and make the necessary changes. Reference: Choose Team Member Hierarchy for Account Manager Targets, Set Up and Configure Account Manager Targets, Set Up Targets for Account Managers Unit | Salesforce Trailhead, Assign an Account Manager Target

NEW QUESTION # 69

.....

Candidates all around the globe use their full potential only to get Salesforce Manufacturing-Cloud-Professional certification.
