

最新的AZ-801信息資訊|高通過率的考試材料|完美的免費下載AZ-801考題

P.S. NewDumps在Google Drive上分享了免費的2026 Microsoft AZ-801考試題庫: <https://drive.google.com/open?id=1GJE7j7iCSvzOCsr9YX-7ciSV8Iddmxjy>

NewDumps是一家專業的網站，它給每位元考生提供優質的服務，包括售前服務和售後服務兩種，如果你需要我們NewDumps Microsoft的AZ-801考試培訓資料，你可以先使用我們的免費試用的部分考題及答案，看看適不適合你，這樣你可以親自檢查了我們NewDumps Microsoft的AZ-801考試培訓資料的品質，再決定購買使用。假如你很不幸的沒通過，我們將退還你購買的全部費用，並提供一年的免費更新，直到你通過為止。

Microsoft AZ-801 Exam Syllabus Topics:

Section	Weight	Objectives
Topic 1: Implement and manage Windows Server high availability	10–15%	- Manage cluster workloads • 1. Implement cluster sets • 2. Configure cluster roles and services - Implement high availability for file services • 1. Configure Scale-Out File Server - Implement failover clustering • 1. Create and configure failover clusters • 2. Configure quorum and storage
Topic 2: Monitor and troubleshoot Windows Server environments	20–25%	- Troubleshoot common issues • 1. Resolve startup and service problems • 2. Diagnose network and storage failures - Manage updates and compliance • 1. Assess compliance using Azure Policy • 2. Use Azure Update Manager - Monitor performance and health • 1. Implement Azure Monitor • 2. Use Windows Admin Center

Topic 3: Implement disaster recovery	10–15%	- Implement Hyper-V Replica • 1. Configure replication settings • 2. Perform failover and failback - Implement Azure Site Recovery • 1. Design recovery plans • 2. Protect on-premises and Azure VMs - Back up and restore Windows Server • 1. Manage Azure Backup • 2. Use Windows Server Backup
Topic 4: Migrate servers and workloads	20–25%	- Upgrade and migrate Windows Server • 1. In-place upgrade and migration paths - Migrate server roles and workloads • 1. Migrate to Azure IaaS VMs • 2. Migrate AD DS, DNS, DHCP - Migrate file servers and data • 1. Migrate DFS and file shares • 2. Use Storage Migration Service
Topic 5: Secure Windows Server on-premises and hybrid infrastructures	25–30%	- Secure Windows Server storage • 1. Configure BitLocker encryption • 2. Implement Azure Disk Encryption - Secure Windows Server operating system • 1. Configure Windows Defender Application Control • 2. Manage credential protection • 3. Configure and manage Exploit Protection - Secure Windows Server networking • 1. Implement domain isolation • 2. Manage Windows Defender Firewall - Remediate security issues using Azure services • 1. Use Microsoft Defender for Cloud • 2. Assess security compliance - Secure hybrid Active Directory infrastructure • 1. Implement AD security features • 2. Secure AD DS and Azure AD integration

高通過率的AZ-801信息資訊，高質量的考試指南幫助妳快速通過AZ-801考試

你是一名IT人員嗎？你報名參加當今最流行的IT認證考試了嗎？如果你是，我將告訴你一個好消息，你很幸運，我們NewDumps Microsoft的AZ-801考試認證培訓資料可以幫助你100%通過考試，這絕對是個真實的消息。如果你想在IT行業更上一層樓，選擇我們NewDumps那就更對了，我們的培訓資料可以幫助你通過所有有關IT認證的，而且價格很便宜，我們賣的是適合，不要不相信，看到了你就知道。

最新的 Windows Server AZ-801 免費考試真題 (Q194-Q199):

問題 #194

You have a server named Server1 that runs Windows Server 2022 and is part of a three-node failover cluster. You need to upgrade Server1 to Windows Server 2025. The solution must minimize downtime for the cluster. What should you do first?

- A. Pause Server1 and drain the workloads.
- B. Take the cluster offline.
- C. Update the functional level of the cluster.
- D. Evict Server1 from the cluster.

答案： A

問題 #195

You have a server that runs Windows Server 2025 Standard and has the Hyper-V role installed. You need to upgrade the server to Windows Server 2025 Datacenter. The solution must minimize downtime. What should you run?

- A. setup.exe
- B. convert.exe
- C. **dism.exe**
- D. slmgc.vbs

答案： C

解題說明：

DISM, which stands for Deployment Image Servicing and Management, is a command-line tool for managing and servicing Windows images. It can be used to install, uninstall, and update Windows features, drivers, and packages, and to repair corrupted system files on both offline and running Windows operating systems.

You can use the **dism.exe** command to upgrade Windows Server 2025 Standard to Datacenter edition with minimal downtime by running the command to set the new edition. However, this is for the operating system edition, not for the Hyper-V role itself, which is installed as a feature.

To upgrade from Windows Server 2025 Standard to Datacenter:

Open PowerShell as an administrator: on your server.

Verify your current edition: by running:

`DISM /online /Get-CurrentEdition`

Check that Datacenter is a valid target edition: by running:

`DISM /online /Get-TargetEditions`

Perform the upgrade: by running the following command with your product key:

`DISM /online /Set-Edition:ServerDatacenter /ProductKey:<YourProductKey> /AcceptEula` Restart the server: when prompted to complete the upgrade.

Important considerations:

Backup: Before you begin, back up your server's data, applications, and system state.

Downtime: While this is an in-place upgrade and involves less downtime than a clean install, the server will still need to be restarted and will be unavailable for a period.

Hyper-V Role: The **dism.exe** command upgrades the edition of the Windows Server operating system, not the Hyper-V role. You can install or enable the Hyper-V role using either DISM or PowerShell. The Datacenter edition includes the Hyper-V role with advanced features like Storage Spaces Direct and Shielded VMs.

問題 #196

Your network contains an Active Directory Domain Services (AD DS) forest. The forest contains the domains shown in the following table.

You are implementing Microsoft Defender for Identity sensors.

Authentication information that must be provided during the sensor installation:

答案:

Reference:

問題 #197

Exhibit

- A. Extend the schema.
- B. Raise the domain functional level of east.contoso.com to Windows Server 2025.
- **C. Raise the domain functional level of contoso.com to Windows Server 2016.**
- D. Raise the forest functional level to Windows Server 2025.

答案: C

解題說明:

Detailed Explanation

Adding or in-place upgrading a domain controller to Windows Server 2025 requires the forest functional level to be at least Windows Server 2016, and a forest functional level can never exceed the domain functional level of any domain in the forest, including the forest root. Because contoso.com, the forest root, is currently at the Windows Server 2012 R2 domain functional level, the forest functional level is capped below Windows Server 2016 even though east.contoso.com already sits at the Windows Server 2016 domain functional level.

Raising contoso.com's domain functional level to Windows Server 2016 removes that ceiling and is therefore the necessary first step before the forest functional level can be raised and the east.contoso.com domain controllers upgraded in place to Windows Server 2025 with minimal additional effort.

問題 #198

Drag and Drop Question

You have an on-premises server named Server1 that runs Windows Server.

You have an Azure subscription that uses Microsoft Defender for Cloud.

You need to onboard Server1 to Defender for Cloud.

Which actions should you perform in sequence? To answer, drag the appropriate actions to the correct order. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Actions

Answer Area

- Create a private endpoint.
- Create an Azure Storage account.
- Create and configure a data collection rule (DCR).
- Create and configure an Azure runbook.
- Create and upgrade a Log Analytics workspace.

Step 1:

Step 2: Install the Azure Connected Machine agent on Server1.

Step 3:

答案:
