BTW, DOWNLOAD part of RealExamFree 2V0-15.25 dumps from Cloud Storage: [https://drive.google.com/open?id=18k\\_wCFwnHvo2lq2XBmN11XvYGovhPFr](https://drive.google.com/open?id=18k_wCFwnHvo2lq2XBmN11XvYGovhPFr)

We have three formats of 2V0-15.25 study materials for your leaning as convenient as possible. Our Professional Level Exams question torrent can simulate the real operation test environment to help you pass this test. You just need to choose suitable version of our 2V0-15.25 guide question you want, fill right email then pay by credit card. It only needs several minutes later that you will receive products via email. After your purchase, 7\*24\*365 Day Online Intimate Service of 2V0-15.25 question torrent is waiting for you. We believe that you don't encounter failures anytime you want to learn our 2V0-15.25 guide torrent.

### VMware 2V0-15.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Install, Configure, Administrate the VMware by Broadcom Solution: This area covers installing, configuring, and managing VMware solutions including VCF Fleet deployment, expansion, and reduction operations.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>VMware by Broadcom Solution: This section focuses on understanding VMware by Broadcom's virtualization and cloud infrastructure platform for managing modern enterprise workloads.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>IT Architectures, Technologies, Standards: This domain covers fundamental frameworks, tools, and best practices for building scalable, secure, and interoperable enterprise IT systems.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Plan and Design the VMware by Broadcom Solution: This domain addresses architectural planning and design principles for creating scalable, secure virtual environments aligned with business requirements.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Troubleshoot and Optimize the VMware by Broadcom Solution: This domain focuses on troubleshooting VCF deployment, upgrades, conversions, workload domains, fleet operations (certificates, passwords, identity), licensing, compute resources, storage (vSAN, supplemental storage), networking (VDS, NSX), VCF Operations tools, Identity Broker automation, and HCX workload migrations.</li> </ul>

## VMware Cloud Foundation 9.0 Support brain dumps, 2V0-15.25 dumps pdf

These formats are 2V0-15.25 web-based practice test software, desktop practice exam software, and VMware Cloud Foundation 9.0 Support (2V0-15.25) PDF dumps files. All these three VMware 2V0-15.25 exam questions formats are easy to use and compatible with all devices and the latest web browsers. Just choose the right VMware Cloud Foundation 9.0 Support (2V0-15.25) exam dumps format and start 2V0-15.25 exam questions preparation today.

## VMware Cloud Foundation 9.0 Support Sample Questions (Q58-Q63):

### NEW QUESTION # 58

An administrator has observed that the vSphere Global Inventory is only available from the management domain vCenter. The Global Inventory is not available from the workload domain's vCenter.

Why is the "Global Inventory" missing from the workload domain's vCenter?

- A. Supervisor Management has not been enabled.
- B. VCF SSO and vCenter Linking have not been configured.
- C. An external VIDB instance has not been configured.
- D. An inventory sync was not run following the workload domain creation.

**Answer: B**

Explanation:

The Global Inventory List (GIL) is only available when multi-vCenter SSO domain linking is configured. In VMware Cloud Foundation, the management domain vCenter is deployed first and becomes the root vCenter for global inventory data. For workload domains, their vCenter Servers must be registered into the same SSO domain and linked with the management-domain vCenter in order for the global inventory data (VMs, hosts, clusters, content libraries) to appear.

If a workload domain vCenter is not SSO-linked, it operates in its own identity domain, and therefore cannot access or present Global Inventory, resulting in exactly the symptom described: the management domain vCenter shows the GIL, while the workload domain vCenter does not.

Option B (Supervisor Management) relates to vSphere with Tanzu and has no impact on Global Inventory.

Option C (inventory sync) is incorrect—there is no manual sync required; GIL relies entirely on SSO linking.

Option D (VIDB) is not related to vCenter linking or inventory visibility; it is used by VCF Identity Broker.

Therefore, the reason the Global Inventory is missing from the workload domain vCenter is that SSO/vCenter Linking has not been configured, which is required for federation across all VCF vCenters.

### NEW QUESTION # 59

An administrator is attempting to troubleshoot why the vSAN witness node cannot form a stretched cluster with the vSAN data nodes. The administrator can successfully ping the vSAN data node from the vSAN witness using the following command:

```
vmkping -I <witness-vmk#> <vsan-IPaddress> -s <1472> -d
```

What could be the possible cause of the issue?

- A. Port 443 is not opened bidirectionally between all nodes.
- B. The customer does not have any virtual machines in the vSAN Cluster.

- C. Port 12321 is not opened bidirectionally between all nodes.
- D. Jumbo Frames have not been enabled on the Witness Network.

**Answer: C**

Explanation:

In avSAN Stretched Cluster, communication between the witness node and data nodes requires several specific TCP/UDP ports. The ability to successfully execute:

`vmkping -I <witness-vmk> <vsan-IP> -s 1472 -d`

confirms that:

- \* L2/L3 connectivity is present
- \* MTU is correctly configured
- \* ICMP traffic flows without fragmentation

However, `vmkping` alone does not verify vSAN control-plane communication.

For the vSAN Witness to properly form a cluster, TCP port 12321 must be open bidirectionally between:

- \* Witness # Data nodes

- \* Data nodes # Witness

Port 12321 is required for:

- \* vSAN cluster membership

- \* Witness traffic

- \* vSAN object health/state synchronization

If this port is blocked by firewall policy or misconfigured network ACLs, the nodes can ping each other, but vSAN witness traffic will fail, preventing the stretched cluster from forming.

Why the other options are incorrect:

- \* B. Port 443- Required for management, not cluster formation.

- \* C. No VMs in cluster- Has no impact on witness formation.

- \* D. Jumbo frames not enabled- Already ruled out by the successful 1472-byte `vmkping` with DF bit.

## NEW QUESTION # 60

An administrator is troubleshooting an issue relating to VMware Cloud Foundation (VCF) Automation. While troubleshooting, the administrator realizes that debug-level information is not displayed in the VCF Automation Task Log.

How would the Administrator enable debug-level information in the Task Log?

- A. Enable "display debug information" in the Administration > General Settings section of the Provider Management portal.
- B. Enable "display debug information" in the Administration > Events and Tasks section of the Provider Management portal.
- C. Enable "display debug information" in the Administration > Settings section of the Organization Management portal.
- D. Enable "display debug information" in the Administration > Feature Flag section of the Provider Management portal.

**Answer: D**

Explanation:

In VMware Cloud Foundation (VCF) 9.0 Automation, the visibility of debug-level information in Task Logs is controlled centrally by the Provider Administrator through the Provider Management portal. Debug logging is not enabled by default because it exposes verbose operational details intended primarily for troubleshooting. According to the VCF Automation architecture and operations model, advanced logging capabilities—including debug output—are gated behind feature flags.

To enable debug-level information, the Provider Admin must navigate to:

Provider Management # Administration # Feature Flags # Display Debug Information Once this flag is enabled, the system begins emitting additional diagnostic detail into Task Logs, improving insight into failures, orchestration flows, API calls, and service-to-service interactions. This aligns with VCF's multi-tenant design, where only the Provider tier has permission to modify global settings that affect all Organizations.

Options A, C, and D are incorrect because Organization-level settings do not control system-wide logging, and the Events/Tasks or General Settings sections do not contain the mechanism for enabling debug output.

Only the Feature Flag section controls this capability.

## NEW QUESTION # 61

An administrator logs into the VMware NSX Manager UI and discovers a time sync issue that has been reported in the VMware Cloud Foundation (VCF) installer.

The administrator performs the following steps:

1. Validates that the NTP server IP addresses are present in the NTP configuration on the VCF Installer.

2. Validates that the DNS records are correctly set for the FQDN and IP address of the two NTP servers.
3. Validates that the NTP servers can be pinged by name and IP address from the VCF Installer.
4. Validates that the time between the NTP servers and the VCF Installer is synchronized successfully.

What additional step should the administrator perform to help identify the cause of the error?

- A. Confirm that the ESX hosts have been configured to use host time synchronization.
- B. Confirm that the NTP service has an allowed rule in the iptables on the VCF Installer.
- **C. Confirm that the time on the ESX hosts allocated for the management domain is synchronized with the same NTP servers as the VCF Installer.**
- D. Confirm that the NTP server details have been specified in the deployment parameter workbook using the required FQDN format.

**Answer: C**

Explanation:

During VMware Cloud Foundation bring-up, time synchronization across all management components is mandatory. The VCF Installer, ESXi hosts, NSX Manager nodes, and vCenter must all sync to the same NTP servers. If even one host or component has a time skew exceeding VMware's allowed limits, VCF will report time sync errors during bring-up or post-deployment. The administrator validated NTP configuration, DNS resolution, ping connectivity, and time sync only on the VCF Installer appliance, but did not verify the ESXi hosts' time synchronization. NSX Manager obtains its time reference from the underlying ESXi host during deployment, so if the ESXi hosts are not synchronized with the same NTP sources, NSX Manager will drift, triggering the exact error described.

Option B (iptables) does not apply—the VCF Installer does not block outbound NTP by default.

Option C refers to workbook formatting, which would fail earlier in deployment—not after NSX Manager is running.

Option A is incorrect because ESXi should never use "host time sync"; NTP must be used.

## NEW QUESTION # 62

An administrator is responsible for managing a VMware Cloud Foundation (VCF) fleet. The following information has been provided about the VCF fleet configuration:

- \* The VCF fleet consists of a single VCF instance with a single management domain and a single workload domain.
  - \* VCF Automation has a single Organization for VM Apps configured with a VCF Cloud Account for the workload domain.
- The administrator has been tasked with creating a new Organization for All Apps to support the developers need to deploy Kubernetes-based applications in a new region in a workload domain.

The administrator attempts to create a new region through the VCF Automation Provider Portal but the VMware NSX manager for the workload domain does not appear on the list of available NSX managers.

What action must the administrator complete to resolve the issue?

- **A. Add the SDDC Manager integration for the VCF instance.**
- B. Trigger an inventory synch in VCF Operations fleet management.
- C. Deploy an additional VCF workload domain cluster.
- D. Deploy a new VCF workload domain.

**Answer: A**

Explanation:

In VMware Cloud Foundation 9.0 Automation, the Provider Portal must have full visibility into the underlying VCF inventory—including NSX Managers, clusters, regions, vCenters, and SDDC Manager objects—before new regions can be created for Kubernetes-based deployments (All Apps Orgs).

The issue described:

"The NSX Manager for the workload domain does not appear in the list of available NSX Managers" occurs when SDDC Manager is not integrated into VCF Automation. Without this integration, VCF Automation cannot discover workload domains or their associated NSX Managers. As a result, when attempting to create a new region, the NSX Manager list is empty.

The required action is:

Add the SDDC Manager integration under VCF Automation # Provider Portal # Integrations.

This integration enables Automation to pull:

- \* NSX Manager inventory
- \* vCenter endpoints
- \* Workload domain topology
- \* Cluster details

Only after this integration is complete will the NSX Manager appear and allow region creation.

Option A and D (deploying new WLD or cluster) are unnecessary-inventory access is the problem, not resources.  
Option B (triggering inventory sync) cannot work because no SDDC Manager integration exists.

## NEW QUESTION # 63

.....

Our 2V0-15.25 training quiz is provided by PDF, Software/PC, and App/Online, which allows you to choose a suitable way to study anytime and anywhere. The PDF versions of 2V0-15.25 study materials can be printed into a paper file, more convenient to read and take notes. You can also try the simulated exam environment with 2V0-15.25 software on PC. Anyway, you can practice the key knowledge repeatedly with our 2V0-15.25 test prep, and at the same time, you can consolidate your weaknesses more specifically.
