

Pass-Sure Analytics-Admn-201 Cert Guide–Updated Valid Dumps Sheet Provider for Analytics-Admn-201: Salesforce Certified Tableau Server Administrator

What's more, part of that TopExamCollection Analytics-Admn-201 dumps now are free: https://drive.google.com/open?id=1KGIVc82zeZ2Xcm_zmaQIYe6T1pgkBWtK

The Salesforce Analytics-Admn-201 online practice test engine that comes with the Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) exam questions from TopExamCollection assists you in simulating the real Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) exams. This is excellent for familiarizing yourself with the Salesforce Certified Tableau Server Administrator and learning what to anticipate on test day. You can also use the Salesforce Practice Test (Links to an external site.) engine to monitor your progress and review your answers to see where you need to improve for the Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) exam.

TopExamCollection is the only one able to provide you the best and fastest updating information about Salesforce Certification Analytics-Admn-201 Exam. Other websites may also provide information about Salesforce certification Analytics-Admn-201 exam, but if you compare with each other, you will find that TopExamCollection provide the most comprehensive and highest quality information. And most of the information of other websites comes mainly from TopExamCollection.

Analytics-Admn-201 Valid Dumps Sheet, Exam Analytics-Admn-201 Blueprint

The most attractive thing about a learning platform is not the size of his question bank, nor the amount of learning resources, but more importantly, it is necessary to have a good control over the annual propositional trend. The Analytics-Admn-201 study materials through research and analysis of the annual questions, found that there are a lot of hidden rules are worth exploring, plus we have a powerful team of experts, so the rule can be summed up and use. The Analytics-Admn-201 Study Materials can be based on the analysis of the annual questions, it is concluded that a series of important conclusions related to the qualification examination, combining with the relevant knowledge of recent years, then predict the direction which can determine this year's exam. Analytics-Admn-201 study materials will improve the ability to accurately forecast the topic and proposition trend this year.

Salesforce Certified Tableau Server Administrator Sample Questions (Q13-Q18):

NEW QUESTION # 13

What file format should you use to register Tableau Server from the command line?

- A. HTTP
- **B. JSON**
- C. XML
- D. YML

Answer: B

Explanation:

Registering Tableau Server from the command line involves providing configuration details (e.g., identity store, license) via the tsm register command. Let's explore this fully:

* Registration Process:

* Run during initial setup or to update settings (e.g., after changing AD/LDAP config).

* Uses a configuration file to pass parameters to TSM.

* Command: tsm register --file <path-to-file>.

* File Format:

* Tableau Server uses JSON for configuration files in TSM commands like tsm register.

* Example:

```
json
CollapseWrapCopy
{
  "identityStore": {
    "type": "local",
    "domain": "example.com"
  }
}
```

* JSON is structured, machine-readable, and aligns with Tableau's modern CLI design.

* Option C (JSON): Correct.

* Official format for tsm register, per documentation and practical use.

* Option A (YML): Incorrect.

* While tabsvc.yml exists internally, it's not for registration-tsm register uses JSON.

* Option B (XML): Incorrect.

* Older Tableau configs used XML (e.g., workgroup.yml pre-TSM), but TSM standardized on JSON.

* Option D (HTTP): Incorrect.

* HTTP is a protocol, not a file format-irrelevant here.

Why This Matters: Correct file format ensures seamless registration, avoiding CLI errors in setup or migrations.

Reference: Tableau Server Documentation - "tsm register" (https://help.tableau.com/current/server/en-us/cli_register.htm).

NEW QUESTION # 14

Your deployment of Tableau Server uses Active Directory authentication. What statement correctly describes the process of importing a group from Active Directory?

- A. Importing a group from Active Directory requires a .csv file that lists user IDs
- B. You can change the name of a group during import, although this will not change the group's name in Active Directory
- **C. New users created as a result of importing a group are assigned the site role specified during the import**
- D. If an imported group contains any users that have Tableau Server accounts, their site role will be changed to match the site role specified during the import

Answer: C

Explanation:

Importing an AD group into Tableau Server syncs user management-let's analyze the process and options:

* AD Group Import Process:

* How: In the UI (Users > Groups > Add Group > Active Directory), enter the AD group name, set a site role, and sync.

* Behavior:

* Existing Users: If a user is already in Tableau Server, their site role remains unchanged unless manually adjusted-sync applies the minimum role only if it upgrades access.

* New Users: Added to Tableau with the site role specified during import.

* Config: Requires AD authentication enabled in TSM.

* Option D (New users created are assigned the site role specified during import): Correct.

* Details: When importing (e.g., "SalesTeam" group, site role: Explorer):

* New users get Explorer.

* Existing users keep their role unless it's below Explorer (e.g., Unlicensed # Explorer).

* Why: Ensures consistent onboarding-new users align with the group's intended access.

* Option A (Existing users' roles change to match import): Incorrect.

* Why: Existing roles persist unless lower than the minimum-e.g., Viewer stays Viewer if import sets Explorer, but Unlicensed upgrades. Not a full overwrite.

* Option B (Requires a .csv file): Incorrect.

* Why: AD import uses live sync via LDAP-no .csv needed (that's for local auth imports).

* Option C (Change group name during import): Incorrect.

* Why: The AD group name is fixed-you can't rename it in Tableau during sync (it mirrors AD).

Post-import renaming is possible but not part of the process.

Why This Matters: Accurate AD sync ensures seamless user management-missteps can disrupt access or licensing.

Reference: Tableau Server Documentation - "Synchronize Active Directory Groups" (https://help.tableau.com/current/server/en-us/groups_sync.htm).

NEW QUESTION # 15

What statement correctly describes locking permissions to a project?

- A. Content permissions are locked to a project by default
- **B. You can lock permissions to a project by changing Customizable to Locked**
- C. You can lock permissions to a project by setting the appropriate Project permission role
- D. Locking permissions to projects must be enabled on the Tableau Server Settings page

Answer: B

Explanation:

In Tableau Server, projects organize content (workbooks, data sources) and use permissions to control access. "Locking permissions" restricts how permissions are managed within a project-let's explore this exhaustively:

* Permission Management Modes:

* Managed by Owner: Default mode. Content owners (e.g., workbook publishers) can set permissions on their items, inheriting project defaults as a starting point.

* Locked to the Project: Project-level permissions are enforced, and content owners cannot modify them. This ensures consistency across all items in the project.

* How to Lock:

* In the Tableau Server web UI:

* Go to Content > Projects.

* Select a project, click Actions > Permissions.

* In the Permissions dialog, change Permissions Management from "Customizable" (Managed by Owner) to "Locked."

* Set the desired permissions (e.g., Viewer, Editor) for users/groups, which then apply uniformly to all content.

* Via REST API: Use the updateProject endpoint with "permissionsLocked": true.

* Option B (You can lock permissions to a project by changing Customizable to Locked): Correct.

- * Details: This is the precise action in the UI-switching from "Customizable" to "Locked" locks permissions at the project level.
- * Impact: Owners lose the ability to override permissions on individual workbooks/data sources, enforcing governance.
- * Example: Set "All Users" to Viewer (Locked)-all content in the project is view-only, regardless of owner intent.
- * Option A (Locking permissions must be enabled on the Server Settings page): Incorrect.
- * Why: Locking is a per-project setting, not a server-wide toggle. The Server Settings page (via TSM) controls global configs (e.g., authentication), not project permissions.
- * Option C (Content permissions are locked by default): Incorrect.
- * Default: New projects are "Managed by Owner" (Customizable), allowing flexibility unless explicitly locked by an admin.
- * Option D (By setting the appropriate Project permission role): Incorrect.
- * Confusion: "Project permission role" isn't a term-permissions are set via rules (e.g., Viewer, Editor), but locking is a separate action (Customizable # Locked).

Why This Matters: Locking permissions ensures uniform access control, critical for regulated environments or large teams where consistency trumps flexibility.

Reference: Tableau Server Documentation - "Lock Project Permissions" (https://help.tableau.com/current/server/en-us/permissions_lock.htm).

NEW QUESTION # 16

Which two tasks always require a server administrator? (Choose two.)

- A. Locking project permissions
- B. Creating a schedule
- C. Adding a site
- D. Adding users

Answer: C,D

Explanation:

In Tableau Server, roles and permissions dictate who can perform specific administrative tasks. A "server administrator" has full control over the entire Tableau Server deployment, while site administrators manage specific sites. Some tasks are restricted to server administrators due to their server-wide impact.

Option B (Adding a site): Creating a new site in a multi-site Tableau Server environment is a server-level task that only a server administrator can perform. Sites are logical partitions within the server, and adding a site affects the overall server structure. Site administrators cannot create new sites; they can only manage existing ones.

Option D (Adding users): Adding users to Tableau Server (e.g., via the TSM interface or tabcmd) is a server administrator task when it involves adding users at the server level or assigning them to the default site. While site administrators can add users to their specific site in a multi-site environment, the initial addition of users to the server requires server administrator privileges. The question's phrasing ("always require") suggests a server-wide context, making this a correct choice.

Option A (Creating a schedule): This is incorrect because both server administrators and site administrators can create schedules for tasks like extract refreshes or subscriptions within their scope. It's not exclusive to server administrators.

Option C (Locking project permissions): This is incorrect because locking project permissions can be done by a site administrator or project leader with appropriate permissions. It's a project-level action, not a server-level task requiring a server administrator.

Reference: Tableau Server Documentation - "Administrative Tasks" (https://help.tableau.com/current/server/en-us/admin_tasks.htm) and "User Management" (<https://help.tableau.com/current/server/en-us/users.htm>).

NEW QUESTION # 17

If a user already exists as part of a group in Tableau Server, and Active Directory synchronization then applies a minimum site role to the group, what will happen to the existing user's site role?

- A. It will change to the minimum site role only if the minimum site role provides more access
- B. It will always change to the minimum site role
- C. It will change to the minimum site role only if the minimum site role reduces access
- D. It will never change as a result of synchronization

Answer: C

Explanation:

When Tableau Server uses Active Directory (AD) for authentication, group synchronization imports AD groups and assigns a minimum site role (e.g., Viewer, Explorer) to users in that group. This ensures users meet a baseline access level. The behavior for existing users during sync is:

- * If the user's current site role provides more access than the minimum (e.g., Explorer vs. Viewer), their role remains unchanged.
- * If the user's current role provides less access than the minimum (e.g., Unlicensed vs. Viewer), their role is upgraded to the minimum.

This preserves higher privileges while enforcing a floor. "Reduces access" means the minimum role is lower than the current role (e.g., Viewer vs. Explorer), in which case the existing role stays.

- * Option A (It will change to the minimum site role only if the minimum site role reduces access):

Correct. The user's role changes only if the minimum increases access (e.g., Unlicensed to Viewer); otherwise, it stays higher.

- * Option B (It will change only if the minimum provides more access): Incorrect wording. This is the inverse of the actual behavior-change occurs when needed to meet the minimum, not to exceed it.

- * Option C (It will always change): Incorrect. Existing higher roles are preserved.

- * Option D (It will never change): Incorrect. It changes if the current role is below the minimum.

Reference: Tableau Server Documentation - "Synchronize Active Directory Groups" (https://help.tableau.com/current/server/en-us/groups_sync.htm).

NEW QUESTION # 18

.....

If you cannot fully believe our Analytics-Admn-201 exam prep, you can refer to the real comments from our customers on our official website before making a decision. There are some real feelings after they have bought our study materials. Almost all of our customers have highly praised our Analytics-Admn-201 exam guide because they have successfully obtained the certificate. What's more, all contents are designed carefully according to the exam outline. As you can see, the quality of our Analytics-Admn-201 Exam Torrent can stand up to the test. Your learning will be a pleasant process.

Analytics-Admn-201 Valid Dumps Sheet: <https://www.topexamcollection.com/Analytics-Admn-201-vce-collection.html>

Analytics-Admn-201 training materials contain both questions and answers, and it's convenient for you to check the answers after finish practicing. Our aim is that the candidates should always come first, in order to let our candidates have the most comfortable and enthusiasm experience, our Analytics-Admn-201 study guide files offer 24/7 customer assisting service to help our candidates downloading and using our Analytics-Admn-201 exam materials: Salesforce Certified Tableau Server Administrator with no doubts. We take all responsibilities once you buy Analytics-Admn-201 practice materials from us.

Please note that this allocation scheme is quite different than the Analytics-Admn-201 Windows heap manager in the sense that the Windows heap manager does not guarantee locality of objects on the heap in the same fashion.

Pass Guaranteed Quiz 2026 Analytics-Admn-201: Salesforce Certified Tableau Server Administrator – Professional Cert Guide

Most of us who start out in Illustrator fall in love with gradients, Analytics-Admn-201 Training Materials contain both questions and answers, and it's convenient for you to check the answers after finish practicing.

Our aim is that the candidates should always come first, in order to let our candidates have the most comfortable and enthusiasm experience, our Analytics-Admn-201 study guide files offer 24/7 customer assisting service to help our candidates downloading and using our Analytics-Admn-201 exam materials: Salesforce Certified Tableau Server Administrator with no doubts.

We take all responsibilities once you buy Analytics-Admn-201 practice materials from us, You not only can get the latest Analytics-Admn-201 exam pdf in our website, but also enjoy comprehensive service when you purchase.

So our experts are not indiscriminate laymen.
