NEW QUESTION # 50
How is broadcast forwarded in Cisco ACI Multi-Pod after ARP flooding is enabled?

- A. Ingress replication is used on the spines to forward broadcast frames in the IPN infrastructure.
- B. For the specific bridge domain, all spines forward the broadcast frames to IPN routers.
- C. Within a pod, the ingress leaf switch floods the broadcast frame on all fabric ports.
- D. Broadcast frames are forwarded inside the pod and across the IPN using the multicast address that is associated to the bridge domain.

Answer: D

Explanation:
After ARP flooding is enabled in Cisco ACI Multi-Pod, broadcast frames are forwarded within the pod and across the Inter-Pod Network (IPN) using the multicast address associated with the bridge domain. If the setting is 'Flood', the leaf switch floods to the Group IP (GIPo) multicast group allocated for the bridge domain, ensuring that both local and remote pods receive a flooded copy
