## Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q51-Q56):

### NEW QUESTION # 51

Your company has the infrastructure shown in the following table.

The on-premises Active Directory domain syncs with Microsoft Entra ID.

Server1 runs an application named App1 that uses LDAP queries to verify user identities in the on-premises Active Directory domain.

You plan to migrate Server1 to a virtual machine in Subscription1.

A company security policy states that the virtual machines and services deployed to Subscription1 must be prevented from accessing the on-premises network.

You need to recommend a solution to ensure that App1 continues to function after the migration.

The solution must meet the security policy.

What should you include in the recommendation?

- A. an Azure VPN gateway
- B. Azure AD Application Proxy
- C. the Active Directory Domain Services role on a virtual machine
- **D. Microsoft Entra Domain Services**

**Answer: D**

Explanation:

Microsoft Entra Domain Services provides managed domain services such as domain join, group policy, lightweight directory access

protocol (LDAP), and Kerberos/NTLM authentication Reference:

<https://docs.microsoft.com/en-us/azure/active-directory-domain-services/overview>

### NEW QUESTION # 52

Your organization has developed and deployed several Azure App Service Web and API applications. The applications use Azure Key Vault to store several authentication, storage account, and data encryption keys.

Several departments have the following requests to support the applications:

You need to recommend the appropriate Azure service for each department request.

What should you recommend? To answer, configure the appropriate options in the dialog box in the answer area.

NOTE: Each correct selection is worth one point.

#### Answer:

Explanation:

Explanation:

### NEW QUESTION # 53

A company has an existing web application that runs on virtual machines (VMs) in Azure.

You need to ensure that the application is protected from SQL injection attempts and uses a layer-7 load balancer. The solution must minimize disruption to the code for the existing web application.

What should you recommend? To answer, drag the appropriate values to the correct items. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

#### Answer:

Explanation:

<https://docs.microsoft.com/en-us/azure/application-gateway/waf-overview>

### NEW QUESTION # 54

You have an Azure subscription. The subscription contains 100 virtual machines that are Windows Server.

You need to recommend a solution that will provide monitoring and an audit trail of the following modifications:

\* Changes to the Windows registry on the virtual machines

\* Changes to the DNS settings of the virtual machines

The solution must minimize administrative effort.

What should you recommend using for each change? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

#### Answer:

Explanation:

Explanation:

### NEW QUESTION # 55

You need to implement the Azure RBAC role assignment. The solution must meet the authentication and authorization requirements.

How many assignments should you configure for the Network Contributor role for Role1? To answer, select appropriate in the answer area.

NOTE:

#### Answer:
