

Updated Appian Valid Dumps ACA-100 Sheet | Try Free Demo before Purchase

The screenshot shows a service page for website design. At the top, there are tabs for 'Website Design', 'App Design', and 'MVP Product'. The 'Website Design' tab is selected, showing a price of '\$100.00'. Below the price, it says 'include 1-3 pages of website design up to 1 hour of resources, responsiveness ensured'. There are two radio buttons: one for '5 Days delivery' and another for '1 Revision'. A list of features is provided, each with a green checkmark: '3 Design Section', '2 Customs Available', 'Responsive Design', 'Source File', 'Content Upgrad', and 'Convert To HTML/CSS'. A large green 'Activate Service' button is at the bottom. To the left of the service details, there's a large image of a red and black smartphone. Below the image, there's a section for 'Looking for a creative UX/UI Designer?' with a brief description and a 'Perfect For' list. The 'Perfect For' list includes: 'Startups/Small Businesses' (for startups or businesses managing digital platforms), 'Websites' (for corporate, portfolios, or product landing pages), 'Mobile Apps' (for iOS, Android, or cross-platform designs), and 'E-commerce Stores' (designed for convenience and better user experience). The 'Package Includes' section lists: '\$100 - 1 Page / Screen', '\$200 - 2 Page / Screen', and 'Custom Offer' (available for custom projects). Below these sections is a 'Portfolio' section showing a grid of mobile app screenshots with 'See Details' buttons. At the bottom, there's a 'Frequently Asked Questions' section with three expandable questions: 'What is included in the branding for Finance design package?', 'Can the design package be customized for my company?', and 'What makes this design suitable for finance-related businesses?'. Each question has a 'See Details' button.

By reviewing these results, you will be able to know and remove your mistakes. These ACA-100 practice exams are created as per the pattern of the Appian Certified Analyst (ACA-100) real examination. Therefore, Appian Certified Analyst (ACA-100) mock exam takers will experience the real exam environment. It will calm down their nerves so they can appear in the ACA-100 final test without anxiety or fear.

If you decide to buy our ACA-100 study questions, you can get the chance that you will pass your ACA-100 exam and get the certification successfully in a short time. For we have helped tens of thousands of our customers achieved their dreams. We believe you won't be the exception, so if you want to achieve your dream and become the excellent people in the near future, please buy our ACA-100 Actual Exam, it will help you.

New Appian ACA-100 Exam Simulator - Exam ACA-100 Score

It is a common sense that only high quality and accuracy ACA-100 training prep can relieve you from those worries. It is our communal wish to reap successful fruits. So our company did a lot to make sure that happen. Our ACA-100 learning quiz compiled by the most professional experts can offer you with high quality and accuracy results for your success. And we can claim that if you study with our ACA-100 Exam Braindumps for 20 to 30 hours, you will pass the exam for sure.

Appian Certified Analyst Sample Questions (Q42-Q47):

NEW QUESTION # 42

During the "initiate" phase, what are two key benefits of successful requirements gathering?

- A. Fewer test cases required
- B. Better performance of the application
- C. Adherence to the business stakeholders' goals
- D. Less rework after the "test" phase

Answer: C,D

Explanation:

Adherence to the Business Stakeholders' Goals (A): Successful requirements gathering ensures that the application being developed aligns with the business objectives and stakeholders' expectations. This alignment is critical to delivering a product that meets the intended purpose and satisfies the needs of the organization. Appian Documentation - Requirements Gathering Best Practices Less Rework After the "Test" Phase (B): Thorough and accurate requirements gathering reduces the likelihood of discovering significant issues during the testing phase. When the requirements are well-defined and understood from the start, the development team is more likely to build the application correctly the first time, resulting in less rework after testing. Appian Documentation - Reducing Rework through Proper Planning Note: Fewer test cases required (C) and better performance of the application (D) are not direct benefits of successful requirements gathering. While better requirements can contribute to a more streamlined testing process and potentially better performance, these are not primary benefits.

NEW QUESTION # 43

Which of the following is a key responsibility of a Product Owner in an Agile project?

- A. Designing the user interface
- B. Writing code for the application
- C. Prioritizing the product backlog
- D. Facilitating daily stand-up meetings

Answer: C

NEW QUESTION # 44

You need to draft user stories.

What are the three most important requirements to collect?

- A. Process Workflow steps
- B. User Experience
- C. Branding
- D. Security
- E. Report Filters

Answer: A,B,D

Explanation:

When drafting user stories, the most important requirements to collect are those that directly impact the functionality, security, and user experience of the application. These elements ensure that the application not only meets the user's needs but also adheres to best practices in development.

Security (A):

Ensuring that the application is secure is paramount. Security requirements define how user data is protected and how access is controlled within the system.

This includes authentication, authorization, data encryption, and compliance with relevant regulations.

Process Workflow Steps (B):

Understanding the specific steps involved in the process is crucial for accurately capturing how the application should function. Detailed workflow steps ensure that the application automates and supports the business process as intended.

User Experience (E):

The user experience (UX) defines how users interact with the application, including the interface design, ease of use, and overall satisfaction.

Capturing UX requirements ensures that the application is intuitive and meets the users' needs.

Why Not Other Options?:

C . Report Filters: While important, they are more specific to reporting functionality and not always a core component of every user story.

D . Branding: Branding requirements are typically considered during the design phase, but they are less critical in the functional

drafting of user stories.

References:

Appian Documentation on Gathering Requirements: Requirements Gathering in Appian Focusing on security, process workflow, and user experience ensures that the application is robust, effective, and user-friendly.

NEW QUESTION # 45

Review the following project phase definition:

"A standardized agreement between Development Team and the Product Owner on what criteria a user story must meet in order for the team to consider it complete." Which option does this definition apply to?

- A. Definition of Ready (DoR)
- B. **Definition of Done (DoD)**
- C. Value Statement
- D. Acceptance Criteria

Answer: B

Explanation:

The "Definition of Done" (DoD) refers to a shared understanding between the Development Team and the Product Owner on the criteria that a user story must meet to be considered complete. This definition helps ensure that all aspects of the user story are fully developed, tested, and meet the agreed-upon standards before being marked as done.

Definition of Done Overview:

DoD includes all conditions that must be satisfied for the work to be accepted by the product owner.

It typically covers code completion, testing, documentation, and any other activities required to deliver a finished product.

Why Not Other Options?:

A . Acceptance Criteria: Defines specific requirements that a user story must meet, but does not encapsulate the broader checklist for completion.

B . Value Statement: Describes the value delivered by a feature, not the criteria for completion.

C . Definition of Ready (DoR): Refers to when a user story is ready to be taken into a sprint, not when it is complete.

References:

Appian Community Success Guide: Definition of Done in Agile Projects

The Definition of Done ensures that the product increment is fully functional, tested, and ready for deployment, maintaining a high standard of quality.

NEW QUESTION # 46

Of the choices provided, which are the three most appropriate use cases for Appian?

- A. **The customer needs to have one site tab for each of their seven personas**
- B. The customer needs to be able to embed the application within their own web page
- C. The customer needs to perform large-scale extract, transform, and load (ETL) operations
- D. **The customer needs to be able to run their application in a browser**
- E. **The customer needs to be able to run their application on mobile devices**

Answer: A,D,E

Explanation:

Appian is a low-code platform designed for building enterprise applications with a focus on flexibility, user experience, and integration capabilities. The most appropriate use cases for Appian include:

Mobile Compatibility (B):

Appian supports mobile-first design, allowing applications to be easily accessed and used on mobile devices without requiring separate development efforts.

This capability is critical for businesses that need their workforce to access applications on the go.

Multiple Site Tabs for Personas (C):

Appian allows for the creation of different site tabs for different user personas, each with a tailored user experience.

This is ideal for organizations with distinct user groups who need customized interfaces and access to specific parts of the application.

Browser-Based Application (D):

Appian applications are web-based and can be accessed directly from a browser, ensuring easy access and a consistent user

experience across different platforms.

Why Not Other Options?:

A . Large-Scale ETL Operations: Appian is not primarily designed for heavy data extraction, transformation, and loading (ETL) tasks, which are typically handled by specialized ETL tools.

E . Embedding in Web Pages: While Appian allows for embedding certain components, it is not the primary focus or strength of the platform compared to full-featured applications.
