

Decided that any long-term exam with any JDP exams questions unfortunate, even can keep fill-refed or switch other version for

1. $\frac{1}{2} \times \frac{1}{2} = \frac{1}{4}$

convenient and significant. You will receive the email from our company in 5 to 10 minutes after you pay successfully; you just need to click on the link and log in, then you can start to use our IDP study torrent for studying. Immediate download after pay successfully is a main virtue of our CrowdStrike Certified Identity Specialist(CCIS) Exam test torrent. At the same time, you will have the chance to enjoy the 24-hours online service if you purchase our products, so we can make sure that we will provide you with an attentive service.

CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q51-Q56):

NEW QUESTION # 51

Which CrowdStrike documentation category would you search to find GraphQL examples?

- A. Identity Protection APIs
- B. Threat Intelligence
- C. XDR
- **D. CrowdStrike APIs**

Answer: D

Explanation:

GraphQL is the underlying query technology used by multiple CrowdStrike platforms, including Falcon Identity Protection. According to the CCIS curriculum, GraphQL examples are documented under the broader "CrowdStrike APIs" documentation category, not limited to a single product.

The CrowdStrike APIs section includes:

- * Authentication and API key usage
- * GraphQL schema references
- * Example GraphQL queries and mutations
- * Pagination, filtering, and response handling

While Identity Protection uses GraphQL for identity-specific queries, the examples themselves are centralized under CrowdStrike APIs to provide consistency across Falcon modules. Product-specific use cases are then layered on top of these core examples.

The other options are incorrect:

- * Threat Intelligence focuses on adversary data.
- * XDR covers detection and correlation concepts.
- * Identity Protection APIs describe endpoints and permissions, not general GraphQL usage examples.

Therefore, Option A is the correct and verified answer.

NEW QUESTION # 52

Which of the following statements is NOT true as it relates to Identity Events, Detections, and Incidents?

- A. A detection can become an element of an incident that preceded it in time
- B. An event can become an element of a detection that preceded it in time
- **C. Events related to an incident that occur after the incident is marked In Progress will create a new incident**
- D. Not all events are security events that become elements of detections

Answer: C

Explanation:

Falcon Identity Protection follows a correlation and enrichment model where events, detections, and incidents are dynamically linked over time. According to the CCIS curriculum, events that occur after an incident is marked In Progress do not automatically create a new incident. Instead, related events and detections are typically added to the existing incident, provided they fall within the incident's correlation and suppression window.

This behavior allows Falcon to present a single evolving incident, showing the full progression of an identity attack rather than fragmenting activity into multiple incidents. Therefore, statement A is not true.

The other statements are correct:

- * Detections can be retroactively associated with incidents that occurred earlier if correlation logic determines relevance.
- * Events can be linked to detections even if the detection is created after the event occurred.
- * Not all events are security-relevant; many remain informational and never become detections.

This adaptive correlation model is a core concept in CCIS training and supports efficient investigation and incident lifecycle management. Hence, Option A is the correct answer.

NEW QUESTION # 53

Which menu option is NOT included in Falcon Identity Threat Detection (ITD)?

- A. Event Analysis
- B. Settings
- **C. Policy Rules**
- D. Privileged Identities

Answer: C

Explanation:

Falcon Identity Threat Detection (ITD) provides visibility, analytics, and detection of identity-based threats but does not include enforcement capabilities. According to the CCIS curriculum, ITD customers have access to investigative and analytical features such as Event Analysis, Privileged Identities, and relevant Settings for visibility and monitoring.

Policy Rules, however, are part of Identity Threat Protection (ITP) and reside in the Enforcement section of the Falcon console. Policy Rules enable automated responses and enforcement actions, such as blocking access or enforcing MFA, which are not available under ITD-only subscriptions.

This distinction is critical in the CCIS material:

* ITD = Detect and analyze identity threats

* ITP = Detect + enforce policy actions

Because ITD does not include enforcement functionality, Policy Rules are not available, making Option D the correct answer.

NEW QUESTION # 54

Where in the Identity Protection module can one view the monitoring status of domain controllers?

- A. System Notifications
- B. Connectors
- **C. Domains**
- D. Settings

Answer: C

Explanation:

In Falcon Identity Protection, the Domains page is where administrators can view the monitoring and health status of domain controllers. The CCIS curriculum explains that this page provides visibility into which domain controllers are actively reporting authentication traffic, their inspection status, and whether Authentication Traffic Inspection (ATI) is enabled.

This view is essential for validating coverage and ensuring that Falcon Identity Protection has sufficient visibility into domain authentication activity. Administrators can quickly identify gaps, such as domain controllers that are not reporting or are misconfigured, and take corrective action.

The other options serve different purposes:

* Settings manage general configuration.

* System Notifications display alerts and messages.

* Connectors manage integrations such as MFA and IDaaS.

Because domain controller visibility and monitoring health are managed at the domain level, Option C (Domains) is the correct and verified answer.

NEW QUESTION # 55

What setting can be switched under the Domain Security Overview for each Active Directory domain and/or Azure tenant?

- A. Goal
- B. Domains
- **C. Scope**
- D. Privileged Identities

Answer: C

Explanation:

In the Domain Security Overview, Scope is a configurable setting that allows administrators to switch between Active Directory

domains and Azure tenants. This capability is essential for organizations managing multiple identity environments, as it enables targeted risk assessment and comparison across different identity infrastructures.

The CCIS documentation explains that Scope determines which domain or tenant's identity data is displayed in the Overview dashboard, including risk scores, trends, and prioritized remediation guidance.

Changing the scope does not alter risk calculations; it simply refocuses the analysis on the selected identity environment.

Other options are incorrect because:

* Privileged Identities represent a subset of users, not a switchable setting.

* Domains are entities, not a dashboard control.

* Goal changes how risks are evaluated, not which environment is displayed.

By allowing granular control over which domain or tenant is analyzed, Scope supports accurate identity risk management in complex, hybrid environments. Therefore, Option D is the correct answer.

NEW QUESTION # 56

.....

You will also face your doubts and apprehensions related to the CrowdStrike CrowdStrike Certified Identity Specialist(CCIS) Exam exam. Our CrowdStrike IDP practice test software is the most distinguished source for the CrowdStrike IDP Exam all over the world because it facilitates your practice in the practical form of the CrowdStrike IDP certification exam.

IDP Valid Test Online: <https://www.passsureexam.com/IDP-pass4sure-exam-dumps.html>

There is no doubt that advanced technologies are playing an important role in boosting the growth of CrowdStrike IDP Valid Test Online companies, CrowdStrike IDP New Braindumps Ebook Besides, the company staff is all responsible and patient to your questions for they have gone through strict training before go to work in reality, What's more, PassSureExam IDP Valid Test Online exam dumps can guarantee 100% pass your exam.

Thus, they may well, and almost certainly do, **IDP New Braindumps Ebook** consume IT products and services from other companies, It also covers how to apply iteration to data processing pipelines—a particularly **IDP New Braindumps Ebook** powerful technique for working with data and problems involving workflows.

Pass IDP Exam with Efficient IDP New Braindumps Ebook by PassSureExam

There is no doubt that advanced technologies are IDP New Braindumps Ebook playing an important role in boosting the growth of CrowdStrike companies, Besides, the company staff is all responsible and patient Valid IDP Test Guide to your questions for they have gone through strict training before go to work in reality.

What's more, PassSureExam exam dumps can guarantee IDP 100% pass your exam, PassSureExam have made all of the different formats so the students won't face any extra issues and crack CrowdStrike Certified Identity Specialist(CCIS) Exam (IDP) certification exams for the betterment of their futures.

If you don't want to waste much time on preparing for your exam, IDP exam braindumps files will be a shortcut for you.
