

NCP-US-6.10 New Exam Camp | NCP-US-6.10 Exam Collection

2026 Latest TorrentVCE NCP-US-6.10 PDF Dumps and NCP-US-6.10 Exam Engine Free Share:
<https://drive.google.com/open?id=1CHh39FY-6zjDznbpVVKUdYmsNCazC2T>

If you want to pass the NCP-US-6.10 exam then you have to put in some extra effort, time, and investment then you will be confident to pass the Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 (NCP-US-6.10) exam. With the complete and comprehensive Nutanix NCP-US-6.10 Exam Dumps preparation you can pass the Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 (NCP-US-6.10) exam with good scores. The Nutanix NCP-US-6.10 Questions can be helpful in this regard. You must try this.

If you buy NCP-US-6.10 exam torrent online, you may have the concern of safety of your money, if you do have the concern like this, we will put your mind at rest. Since we apply the international recognition third party for NCP-US-6.10 exam materials payment, and they are very safe. Your money and account will be very safe if you choose us. What's more, we also pass guarantee and money back guarantee if you fail to pass the exam, and the money will be refunded to your payment account. If you have any questions about the NCP-US-6.10 Exam Torrent, just contact us.

NCP-US-6.10 Exam Collection - NCP-US-6.10 Test Engine

Moreover, you do not need an active internet connection to utilize TorrentVCE Nutanix NCP-US-6.10 practice exam software. It works without the internet after software installation on Windows computers. The TorrentVCE web-based Nutanix NCP-US-6.10 Practice Test requires an active internet and it is compatible with all operating systems. You can conveniently test your performance by checking your score each time you use our Nutanix NCP-US-6.10 practice exam software.

Nutanix Certified Professional - Unified Storage (NCP-US) v6.10 Sample Questions (Q35-Q40):

NEW QUESTION # 35

After configuring Smart DR, an administrator observes that a policy in the Policies tab is not visible within Prism Central (PC).

What is the likely cause of this issue?

- A. The administrator is logged into PC with a local account rather than an AD account.
- B. The share permissions include more than one local user.
- **C. Port 7515 is not opened between the source and recovery networks.**
- D. The initial replication has not completed.

Answer: C

Explanation:

Smart DR requires port 7515 (TCP) for communication between source/target clusters and Prism Central. If blocked:

- * Policies fail to synchronize with PC.
- * Policies become "invisible" in the UI.

Other options are unrelated:

- * A: Share permissions don't affect policy visibility.
- * B: Initial replication progress appears in UI even if incomplete.
- * C: AD/local login affects permissions, not policy discovery.

Reference: Nutanix Smart DR Administration Guide:

"Ensure port 7515 is open between Prism Central, source cluster, and target cluster. Blocking this port prevents policy metadata from appearing in PC." (Chapter: "Troubleshooting Smart DR") Nutanix Unified Storage (NCP-US) Study Material:

"Connectivity issues on port 7515 are the primary cause of missing Smart DR policies in Prism Central." (Section: "Smart DR Deployment Requirements")

NEW QUESTION # 36

An administrator wants to use Smart DR to ensure that in the event of an unplanned loss of service, users are redirected automatically to the recovery site. What can satisfy this requirement?

- A. Register Nutanix Files with the same PC.
- B. Configure Protection Policy replication schedule.
- C. Register PE clusters to PC before enabling the Files Manager.
- **D. Configure AD and DNS access for seamless client failover.**

Answer: D

Explanation:

To ensure that users are automatically redirected to the recovery site during an unplanned loss of service when using Smart DR for Nutanix Files, the administrator must configure Active Directory (AD) and DNS access for seamless client failover. Smart DR enables disaster recovery by replicating file shares between primary and recovery sites, and automatic client redirection requires proper configuration of AD and DNS to update client access to the recovery site's file server.

The Nutanix Unified Storage Administration (NUSA) course states, "For Smart DR to support seamless failover in Nutanix Files, AD and DNS must be configured to redirect clients to the recovery site's file server VIP automatically during a failover event." This involves ensuring that the file server's DNS name resolves to the recovery site's VIP and that AD authentication is available at the recovery site to maintain user access to file shares.

The Nutanix Certified Professional - Unified Storage (NCP-US) study guide elaborates that "Smart DR failover requires AD and DNS integration to update the file server's DNS records to point to the recovery site's VIP, ensuring clients are redirected without manual intervention." This configuration allows clients to continue accessing file shares using the same DNS name, with the underlying IP address switching to the recovery site's VIP during failover.

The other options are incorrect or insufficient:

- * Configure Protection Policy replication schedule: While configuring a replication schedule is necessary for Smart DR to replicate data, it does not address the requirement for automatic client redirection, which depends on AD and DNS.
- * Register PE clusters to PC before enabling the Files Manager: Registering Prism Element (PE) clusters to Prism Central (PC) is a prerequisite for managing Nutanix Files, but it does not directly enable automatic client redirection for Smart DR.
- * Register Nutanix Files with the same PC: While Nutanix Files instances may be managed by the same Prism Central, this does not ensure automatic client redirection, which requires AD and DNS configuration.

The NUSA course documentation highlights that "Smart DR leverages AD and DNS to provide seamless failover, ensuring clients are automatically redirected to the recovery site's file server without service interruption." References:

Nutanix Unified Storage Administration (NUSA) Course, Section on Nutanix Files: "Smart DR configuration and failover requirements." Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Topic 2: Configure and Utilize Nutanix Unified Storage, Subtopic: "Smart DR and client failover configuration." Nutanix Documentation (<https://www.nutanix.com>), Nutanix Files Administration Guide: "Configuring AD and DNS for Smart DR failover."

NEW QUESTION # 37

An administrator needs to reduce the amount of storage used by Nutanix Files on the cluster. The administrator is looking to enable Tiering capabilities to send data to an on-premise S3 compatible bucket.

The administrator needs to keep the control on-premise and no cloud services should be used.

Which Smart Tiering function should the administrator use?

- A. Files Analytics
- B. Data Lens
- C. Standard
- **D. Advanced**

Answer: D

Explanation:

Nutanix Files Smart Tiering offers two modes:

* Standard Tiering: Tiers data to internal Nutanix Objects (on the same cluster).

* Advanced Tiering: Tiers data to external S3-compatible storage (on-premises or public cloud).

The requirement specifies an *on-premise S3 bucket* with no cloud services, making Advanced Tiering the solution.

* Option A (Standard): Requires internal Nutanix Objects, not external S3.

* Option C (Files Analytics): Provides usage insights but doesn't tier data.

* Option D (Data Lens): A cloud-based governance tool (requires cloud connectivity).

Reference: Nutanix Unified Storage Administration (NUSA) Course Study Guide:

"Advanced Smart Tiering integrates with external S3-compatible object stores for cost-effective tiering. Use it for on-premises object storage to maintain data locality." (Section: "Smart Tiering for Storage Optimization") (Module: "Nutanix Files Advanced Features") Nutanix Objects Administration Guide:

"Advanced Tiering supports on-premises S3 targets like Nutanix Objects or third-party solutions, ensuring full control over tiered data." (Chapter: "Configuring Advanced Smart Tiering")

NEW QUESTION # 38

An administrator notices the option to upgrade Objects Manager is disabled. What is the most likely reason?

- A. Provided access keys are wrong
- B. Objects browser is not available
- **C. Objects Service upgrade previously failed**
- D. Prism Element upgrade previously failed

Answer: C

Explanation:

The administrator is attempting to upgrade Objects Manager, a component of Nutanix Objects, but notices that the upgrade option is disabled in Prism Central's Lifecycle Manager (LCM). The most likely reason is that an ****Objects Service upgrade previously failed****. Nutanix Objects consists of multiple components, including Objects Manager and Objects Service, and LCM enforces dependencies between these components during upgrades. If a prior upgrade of Objects Service failed, LCM will disable the upgrade option for Objects Manager until the issue with Objects Service is resolved.

The ****Nutanix Unified Storage Administration (NUSA)**** course states, "LCM may disable the upgrade option for Objects Manager if a dependency, such as Objects Service, has a failed upgrade, as Nutanix Objects components must be upgraded in a specific order to maintain system stability." Objects Service is a core component of Nutanix Objects that handles the underlying object storage operations, while Objects Manager provides management and orchestration. A failed Objects Service upgrade can leave the system in an inconsistent state, preventing further upgrades of related components like Objects Manager until the failure is resolved.

The ****Nutanix Certified Professional - Unified Storage (NCP-US)**** study guide further elaborates that "a common reason for a disabled upgrade option in LCM for Objects Manager is a previous failure in upgrading Objects Service, which must be addressed by troubleshooting the failed upgrade and ensuring all dependencies are met." The administrator should check the LCM logs for details of the failed Objects Service upgrade, resolve the issue (e.g., by addressing network connectivity, disk space, or version compatibility problems), and then retry the upgrade process.

The other options are incorrect:

- ****Provided access keys are wrong****: Access keys are relevant for S3-compatible API access to Nutanix Objects buckets, not for LCM upgrades of Objects Manager.

- ****Objects browser is not available****: The "Objects browser" is not a component or requirement for upgrading Objects Manager;

this term may refer to the UI for browsing objects, which is unrelated to LCM upgrades.

- ****Prism Element upgrade previously failed****: A failed Prism Element upgrade might affect cluster-level operations, but it is less likely to directly disable the Objects Manager upgrade option, as Objects Manager upgrades are managed through Prism Central and depend on Objects Service, not Prism Element.

The NUSA course documentation emphasizes that "a failed Objects Service upgrade is a frequent cause of disabled upgrade options for Objects Manager in LCM, requiring administrators to resolve the failure before proceeding." References:

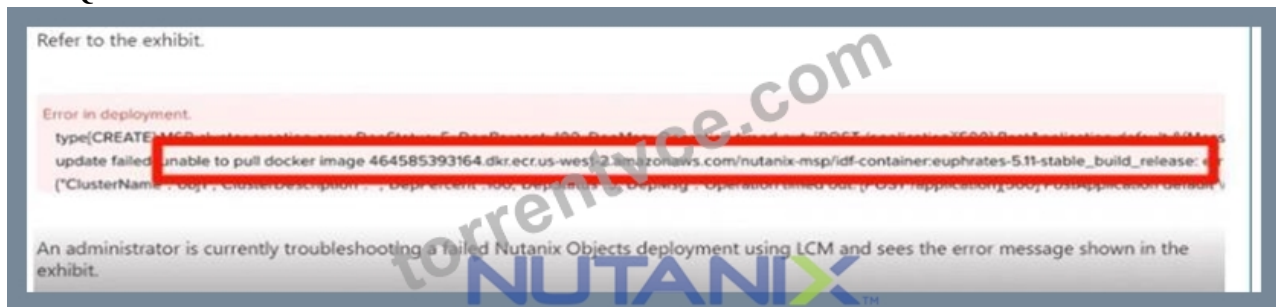

- Nutanix Unified Storage Administration (NUSA) Course, Section on Lifecycle Management:

"Troubleshooting disabled upgrade options in LCM."

- Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Topic 4: Troubleshoot Nutanix Unified Storage, Subtopic: "Diagnosing upgrade issues for Nutanix Objects components."

- Nutanix Documentation (<https://www.nutanix.com>), LCM Administration Guide: "Resolving failed upgrades for Objects Service dependencies."

NEW QUESTION # 39

An administrator is currently troubleshooting a failed Nutanix Objects deployment using LCM and sees the error message shown in the exhibit.

The Objects cluster deployment is experiencing the following symptoms:

- * The Objects Home UI Page shows the error: unable to pull the docker images
- * The docker pull is failing on the first image

The administrator determined that MSP cluster deployment has completed successfully looking at msp_controller.out.

Which log file should the administrator use to investigate and troubleshoot this issue further?

- A. lcm_metrics_uploader.out
- **B. aoss_service_manager.out**
- C. domain_manager.out
- D. cluster_health.out

Answer: B

Explanation:

According to the Nutanix Unified Storage Administration (NUSA) course, in the Troubleshooting Nutanix Objects Deployment section, the aoss_service_manager.out log file is explicitly responsible for tracking the status and lifecycle of container services, including pulling Docker images during the deployment of Nutanix Objects.

This log file is where administrators should look for:

- * Container image pull attempts
- * Any errors during docker pull actions
- * Overall container service management actions and errors

The module "Deploying and Troubleshooting Nutanix Objects" from the NUSA course states:

"During deployment of Nutanix Objects, the aoss_service_manager.out log file provides detailed status information regarding container image pulls, container lifecycle events, and object service startup procedures.

This log file is essential when troubleshooting deployment failures related to container image downloads." The other log files listed in the question are used for different components:

- * domain_manager.out: Related to domain services and identity management.
- * lcm_metrics_uploader.out: Responsible for uploading metrics, not related to container image pulls.
- * cluster_health.out: Used for overall cluster health, but not specific to container lifecycle events.
