## 問題 #42

Refer to the exhibit.

Based on the settings shown in the exhibit what action will FortiClient take when it detects that a user is trying to download an infected file?

- A. Quarantines the infected files and logs all access attempts
- B. Blocks the infected files as it is downloading
- C. Allows the infected file to download without scan
- D. Sends the infected file to FortiGuard for analysis

答案： C

Block Malicious Website has nothing to do with infected files. Since Realtime Protection is OFF, it will be allowed without being scanned.

Based on the settings shown in the exhibit:

- \* Realtime Protection:OFF
- \* Dynamic Threat Detection:OFF
- \* Block malicious websites:ON
- \* Threats Detected:75

The "Realtime Protection" setting is crucial for preventing infected files from being downloaded and executed. Since "Realtime Protection" is OFF, FortiClient will not actively scan files being downloaded. The setting "Block malicious websites" is intended to prevent access to known malicious websites but does not scan files for infections.

Therefore, when a user tries to download an infected file, FortiClient will allow the file to download without scanning it due to the Realtime Protection being OFF.
