Valid Exam 312-38 Book - Latest 312-38 Exam Pattern

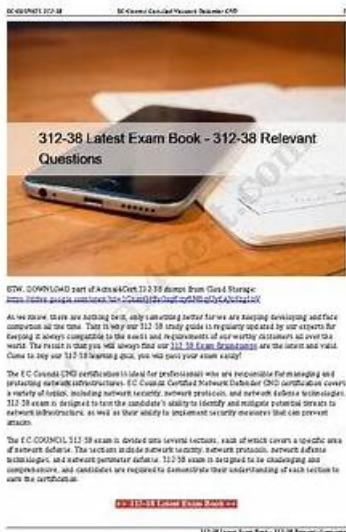

What's more, part of that Exams-boost 312-38 dumps now are free: https://drive.google.com/open?id=1Qt3PPRLcWJ5eVHPKD484X6v4uG2X1tnC

The education level of the country has been continuously improved. At present, there are more and more people receiving higher education, and even many college graduates still choose to continue studying in school. Getting the test 312-38 certification maybe they need to achieve the goal of the learning process, have been working for the workers, have more qualifications can they provide wider space for development. The 312-38 Actual Exam guide can provide them with efficient and convenient learning platform so that they can get the certification as soon as possible in the shortest possible time. A high degree may be a sign of competence, getting the test 312-38 certification is also a good choice. When we get enough certificates, we have more options to create a better future.

What is more, we have free demos are freebies for your information. In case you are tentative about their quality, we give these demos form which you could get the brief outline and questions closely related with the 312-38 practice materials. Only by practising them on a regular base, you will see clear progress happened on you. Besides, rather than waiting for the gain of our 312-38 practice materials, you can download them immediately after paying for it, so just begin your journey toward success now.

Latest Valid Exam 312-38 Book for Real Exam

Our 312-38 exam torrent has three versions which people can choose according to their actual needs: PDF, PC and APP versions.

EC-COUNCIL EC-Council Certified Network Defender CND Sample Questions (Q444-Q449):

NEW QUESTION # 444
Which of the following network scanning tools is a TCP/UDP port scanner that works as a ping sweeper and hostname resolver?

- A. Nmap
- B. SuperScan
- C. Hping
- D. Netstat

Answer: B

Explanation:
SuperScan is a TCP/UDP port scanner. It also works as a ping sweeper and hostname resolver. It can ping a given range of IP addresses and resolve the host name of the remote system.
The features of SuperScan are as follows:
It scans any port range from a built-in list or any given range.
It performs ping scans and port scans using any IP range.
It modifies the port list and port descriptions using the built in editor.
It connects to any discovered open port using user-specified "helper" applications.
It has the transmission speed control utility.
Answer option D is incorrect. Nmap is a free open-source utility for network exploration and security auditing. It is used to discover computers and services on a computer network, thus creating a "map" of the network. Just like many simple port scanners, Nmap is capable of discovering passive services. In addition, Nmap may be able to determine various details about the remote computers. These include operating system, device type, uptime, software product used to run a service, exact version number of that product, presence of some firewall techniques and, on a local area network, even vendor of the remote network card. Nmap runs on Linux, Microsoft Windows, etc. Answer option C is incorrect. Netstat (network statistics) is a command-line tool that displays network connections (both incoming and outgoing), routing tables, and a number of network interface statistics. It is available on Unix, Unix-like, and Windows NT-based operating systems. It is used to find problems on the network and to determine the amount of traffic on the network as a performance measurement. Answer option A is incorrect. Hping is a free packet generator and analyzer for the TCP/IP protocol. Hping is one of the de facto tools for security auditing and testing of firewalls and networks. The new version of hping, hping3, is scriptable using the Tcl language and implements an engine for string based, human readable description of TCP/IP packets, so that the programmer can write scripts related to low level TCP/IP packet manipulation and analysis in very short time. Like most tools used in computer security, hping is useful to both system administrators and crackers (or script kiddies).

NEW QUESTION # 445
Which of the following key features is used by TCP in order to regulate the amount of data sent by a host to another host on the network?

- A. Flow control
- B. Congestion control
- C. TCP timestamp
- D. Sequence number

Answer: A

NEW QUESTION # 446
You work as a professional Computer Hacking Forensic Investigator for DataEnet Inc. You want to investigate e-mail information of an employee of the company. The suspected employee is using an online e-mail system such as Hotmail or Yahoo. Which of the following folders on the local computer will you review to accomplish the task? Each correct answer represents a complete solution. Choose all that apply.

- A. Cookies folder
- B. History folder
- C. Download folder
- D. Temporary Internet Folder

Answer: A,B,D

Explanation:
Online e-mail systems such as Hotmail and Yahoo leave files containing e-mail message information on the local computer. These files are stored in a number of folders, which are as follows:
Cookies folder
Temp folder
History folder
Cache folder
Temporary Internet Folder Forensic tools can recover these folders for the respective e-mail clients. When folders are retrieved, e-mail files can be accessed. If the data is not readable, various tools are available to decrypt the information such as a cookie reader used with cookies.
Answer option D is incorrect. Download folder does not contain any e-mail message information.

NEW QUESTION # 447

Which of the following examines network traffic to identify threats that generate unusual traffic flows, such as distributed denial of service (DDoS) attacks, certain forms of malware, and policy violations?

- A. Host-based Intrusion Prevention
- B. Network Behavior Analysis
- C. Wireless Intrusion Prevention System
- D. Network-based Intrusion Prevention

Answer: B

Explanation:
Explanation
Explanation:
Network Behavior Analysis examines network traffic to identify threats that generate unusual traffic flows, such as distributed denial of service (DDoS) attacks, certain forms of malware, and policy violations.
Answer option B is incorrect. Network-based Intrusion Prevention (NIPS) monitors the entire network for suspicious traffic by analyzing protocol activity.
Answer option C is incorrect. Wireless Intrusion Prevention System (WIPS) monitors a wireless network for suspicious traffic by analyzing wireless networking protocols.
Answer option D is incorrect. Host-based Intrusion Prevention (HIPS) is an installed software package that monitors a single host for suspicious activity by analyzing events occurring within that host.

NEW QUESTION # 448

You are a professional Computer Hacking forensic investigator. You have been called to collect evidences of buffer overflow and cookie snooping attacks. Which of the following logs will you review to accomplish the task? Each correct answer represents a complete solution. Choose all that apply.

- A. System logs
- B. Event logs
- C. Program logs
- D. Web server logs

Answer: A,B,C

NEW QUESTION # 449
