Topic 5	• Performance, Troubleshooting, and Security Management: This section measures the skills of IT Administrators and covers performance, troubleshooting, and security management, making up less than 10% of the exam. It focuses on optimizing performance, resolving issues, and ensuring data security in data visualization environments.

SAP Certified Associate - Data Analyst - SAP Analytics Cloud Sample Questions (Q41-Q46):

NEW QUESTION # 41

How can you determine node relationships in a value driver tree? Note: There are 2 correct answers to this question.

- A. Use a model converted measure
- B. Use a calculated member
- C. Use a dimension hierarchy
- D. Use a story calculated measure

Answer: B,C

NEW QUESTION # 42

What can you use to organize dimensions into logical categories in a live model?

- A. Groups
- B. Parent-child hierarchy
- C. Level-based hierarchy
- D. Value driver tree

Answer: B

Explanation:

In a live model within SAP Analytics Cloud, dimensions can be organized into logical categories using either level-based hierarchies or parent-child hierarchies. Level-based hierarchies are used when the relationships between items are defined by distinct levels, such as Geography might be divided into Country, State, and City levels. Parent-child hierarchies, on the other hand, are useful when the data's hierarchy is not strictly defined by levels but by a parent relationship where a child member is associated with a parent member, which is common in organizational structures or product categories.

NEW QUESTION # 43

You have a story based on an import model. The transaction data in the model's data source changes. How can you update the data

in the model? Note: There are 2 correct answers to this question.

- A. Allow model import
- **B. Schedule the import**
- C. Refresh the import job
- **D. Refresh the story**

Answer: B,D

Explanation:

To update the data in a model based on an import connection, two main approaches can be used:

Refresh the story: This action forces SAP Analytics Cloud to reload the data for the visualizations in a story, pulling in the most recent data available in the model. This is a manual process initiated by the user.

Schedule the import: This option allows users to set up a recurring data import schedule, ensuring the model is regularly updated with the latest data from the source system. This automated process helps maintain data freshness without manual intervention.

Both methods ensure that the story reflects the most current data, accommodating changes in the transaction data of the model's data source.

NEW QUESTION # 44

What can you do with a multi action? Note: There are 2 correct answers to this question.

- **A. Import transaction data**
- B. Run allocation processes
- C. Approve data
- **D. Run allocation data actions**

Answer: A,D

NEW QUESTION # 45

You have a dataset that extracts data from an SAP Business Warehouse (SAP BW) system. The data in the SAP BW system changes. How can you update the dataset?

- A. You must create a new dataset.
- B. You must manually reimport the data.
- **C. You can schedule the dataset to update on a regular basis.**
- D. You must refresh the story that uses the dataset.

Answer: C

Explanation:

For datasets that extract data from external systems like SAP Business Warehouse (SAP BW), SAP Analytics Cloud provides the capability to schedule updates on a regular basis. This feature ensures that the dataset within SAP Analytics Cloud remains up-to-date with the latest changes from the SAP BW system, without the need for manual reimport or creating a new dataset. Scheduled updates can be configured to run at specific intervals, automating the data refresh process.
