Actual Google Certified Professional - Cloud Architect (GCP) (Professional-Cloud-Architect) dumps are designed to help applicants crack the Google Professional-Cloud-Architect test in a short time. There are dozens of websites that offer Professional-Cloud-Architect exam questions. But all of them are not trustworthy. Some of these platforms may provide you with Google Certified Professional - Cloud Architect (GCP) (Professional-Cloud-Architect) invalid dumps. Upon using outdated Google Professional-Cloud-Architect dumps you fail in the Google Certified Professional - Cloud Architect (GCP) (Professional-Cloud-Architect) test and lose your resources.

It is important to note that the Google Professional-Cloud-Architect Exam is updated regularly to reflect the latest technologies and best practices in cloud computing. This means that candidates should stay up-to-date with the latest developments in cloud computing and GCP to ensure their knowledge is current and relevant.

Getting Ready for the Exam

Following training courses is a great way to be exam-ready. Enrolling in the programs like Architecting with Google Cloud: Design and Process, Google Cloud Fundamentals: Core Infrastructure, and Architecting with Google Compute Engine will help you gain mastery over the test's content.

Professional-Cloud-Architect Relevant Answers & Professional-Cloud-Architect Exam Pattern

Our product backend port system is powerful, so it can be implemented even when a lot of people browse our website can still let users quickly choose the most suitable for his Professional-Cloud-Architect learning materials, and quickly completed payment. It can be that the process is not delayed, so users can start their happy choice journey in time. Once the user finds the learning material that best suits them, only one click to add the Professional-Cloud-Architect learning material to their shopping cart, and then go to the payment page to complete the payment, our staff will quickly process user orders online. In general, users can only wait about 5-10 minutes to receive our Professional-Cloud-Architect learning material, and if there are any problems with the reception, users may contact our staff at any time. To sum up, our delivery efficiency is extremely high and time is precious, so once you receive our email, start your new learning journey.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q84-Q89):

NEW QUESTION # 84

As part of Dress4Win's plans to migrate to the cloud, they want to be able to set up a managed logging and monitoring system so

they can handle spikes in their traffic load.

They want to ensure that:

- * The infrastructure can be notified when it needs to scale up and down to handle the ebb and flow of usage throughout the day
- * Their administrators are notified automatically when their application reports errors.
- * They can filter their aggregated logs down in order to debug one piece of the application across many hosts Which Google StackDriver features should they use?

- A. Monitoring, Logging, Alerts, Error Reporting
- **B. Monitoring, Logging, Debug, Error Report**
- C. Logging, Alerts, Insights, Debug
- D. Monitoring, Trace, Debug, Logging

Answer: B

NEW QUESTION # 85

Your organization has stored sensitive data in a Cloud Storage bucket. For regulatory reasons, your company must be able to rotate the encryption key used to encrypt the data in the bucket. The data will be processed in Dataproc. You want to follow Google-recommended practices for security What should you do?

- A. Create a key with Cloud Key Management Service (KMS). Set the encryption key on the bucket to the Cloud KMS key.
- **B. Create a key with Cloud Key Management Service (KMS) Encrypt the data using the encrypt method of Cloud KMS.**
- **C. Generate an AES-256 encryption key. Encrypt the data in the bucket using the customer-supplied encryption keys feature.**
- D. Generate a GPG key pair. Encrypt the data using the GPG key. Upload the encrypted data to the bucket.

Answer: B,C

Explanation:

<https://cloud.google.com/storage/docs/encryption/using-customer-managed-keys>

NEW QUESTION # 86

Case Study: 7 - Mountkirk Games

Company Overview

Mountkirk Games makes online, session-based, multiplayer games for mobile platforms. They build all of their games using some server-side integration. Historically, they have used cloud providers to lease physical servers.

Due to the unexpected popularity of some of their games, they have had problems scaling their global audience, application servers, MySQL databases, and analytics tools.

Their current model is to write game statistics to files and send them through an ETL tool that loads them into a centralized MySQL database for reporting.

Solution Concept

Mountkirk Games is building a new game, which they expect to be very popular. They plan to deploy the game's backend on Google Compute Engine so they can capture streaming metrics, run intensive analytics, and take advantage of its autoscaling server environment and integrate with a managed NoSQL database.

Business Requirements

Increase to a global footprint.

□ Improve uptime - downtime is loss of players.

□ Increase efficiency of the cloud resources we use.

□ Reduce latency to all customers.

□ Technical Requirements

Requirements for Game Backend Platform

□ Dynamically scale up or down based on game activity.

□ Connect to a transactional database service to manage user profiles and game state.

□ Store game activity in a timeseries database service for future analysis.

□ As the system scales, ensure that data is not lost due to processing backlogs.

□ Run hardened Linux distro.

□ Requirements for Game Analytics Platform

□ Dynamically scale up or down based on game activity

- Process incoming data on the fly directly from the game servers
- Process data that arrives late because of slow mobile networks
- Allow queries to access at least 10 TB of historical data
- Process files that are regularly uploaded by users' mobile devices
- Executive Statement

Our last successful game did not scale well with our previous cloud provider, resulting in lower user adoption and affecting the game's reputation. Our investors want more key performance indicators (KPIs) to evaluate the speed and stability of the game, as well as other metrics that provide deeper insight into usage patterns so we can adapt the game to target users.

Additionally, our current technology stack cannot provide the scale we need, so we want to replace MySQL and move to an environment that provides autoscaling, low latency load balancing, and frees us up from managing physical servers.

For this question, refer to the Mountkirk Games case study. Mountkirk Games wants to migrate from their current analytics and statistics reporting model to one that meets their technical requirements on Google Cloud Platform.

Which two steps should be part of their migration plan? (Choose two.)

- A. Evaluate the impact of migrating their current batch ETL code to Cloud Dataflow.
- B. Draw an architecture diagram that shows how to move from a single MySQL database to a MySQL cluster.
- C. Load 10 TB of analytics data from a previous game into a Cloud SQL instance, and run test queries against the full dataset to confirm that they complete successfully.
- D. Write a schema migration plan to denormalize data for better performance in BigQuery.
- E. Integrate Cloud Armor to defend against possible SQL injection attacks in analytics files uploaded to Cloud Storage.

Answer: A,D

NEW QUESTION # 87

You are designing a large distributed application with 30 microservices. Each of your distributed microservices needs to connect to a database back-end. You want to store the credentials securely.

Where should you store the credentials?

- A. In the source code
- B. In a config file that has restricted access through ACLs
- C. In a secret management system
- D. In an environment variable

Answer: C

Explanation:

A is not correct because storing credentials in source code and source control is discoverable, in plain text, by anyone with access to the source code. This also introduces the requirement to update code and do a deployment each time the credentials are rotated.

B is not correct because consistently populating environment variables would require the credentials to be available, in plain text, when the session is started.

C is correct because key management systems generate, use, rotate, encrypt, and destroy cryptographic keys and manage permissions to those keys.

D is not correct because instead of managing access to the config file and updating manually as keys are rotated, it would be better to leverage a key management system. Additionally, there is increased risk if the config file contains the credentials in plain text.

NEW QUESTION # 88

For this question, refer to the TerramEarth case study.

The TerramEarth development team wants to create an API to meet the company's business requirements. You want the development team to focus their development effort on business value versus creating a custom framework. Which method should they use?

- A. Use Google Container Engine with a Django Python container. Focus on an API for the public.
- B. Use Google App Engine with Google Cloud Endpoints. Focus on an API for dealers and partners.
- C. Use Google Container Engine with a Tomcat container with the Swagger (Open API Specification) framework. Focus on an API for dealers and partners.
- D. Use Google App Engine with the Swagger (open API Specification) framework. Focus on an API for the public.
- E. Use Google App Engine with a JAX-RS Jersey Java-based framework. Focus on an API for the public.

Answer: B

Explanation:

Develop, deploy, protect and monitor your APIs with Google Cloud Endpoints. Using an Open API Specification or one of our API frameworks, Cloud Endpoints gives you the tools you need for every phase of API development.

From scenario:

Business Requirements

Decrease unplanned vehicle downtime to less than 1 week, without increasing the cost of carrying surplus inventory Support the dealer network with more data on how their customers use their equipment to better position new products and services Have the ability to partner with different companies - especially with seed and fertilizer suppliers in the fast-growing agricultural business - to create compelling joint offerings for their customers.

NEW QUESTION # 89

.....

If you are worried that it is not easy to obtain the certification of Professional-Cloud-Architect. Our Professional-Cloud-Architect study questions can meet your needs. Once you use our Professional-Cloud-Architect exam materials, you don't have to worry about consuming too much time, because high efficiency is our great advantage. You only need to spend 20 to 30 hours on practicing and consolidating of our Professional-Cloud-Architect learning material, you will have a good result. After years of development practice, our Professional-Cloud-Architect test torrent is absolutely the best. You will embrace a better future if you choose our Professional-Cloud-Architect exam materials.
