## NEW QUESTION # 23
How must the power to a system with dual power supplies on aCisco Nexus switch be connected?

- A. Connect both power supplies to a power distribution unit with built-in redundancy.
- B. Connect the primary power supply to the main source and the secondary to a backup generator.
- C. Connect each power supply to a separate power source.
- D. Connect both power supplies to a single power source.

**Answer: C**

Explanation:
In a Cisco Nexus switch withdual power supplies, the recommended method is toconnect each power supply to a separate power source(Option C). This ensures power redundancy and fault tolerance.
If one power source fails (e.g., due to a power outage or circuit failure), the switch can continue operating uninterrupted using the second power source. Connecting both to a single source (Option D) defeats the purpose of redundancy.
