ISACA Certified Information Security Manager Sample Questions (Q331-Q336):

NEW QUESTION # 331

The MOST appropriate individual to determine the level of information security needed for a specific business application is the:

- A. information security manager.

- B. system developer.
- **C. system data owner.**
- D. steering committee.

Answer: C

Explanation:

Explanation/Reference:

Explanation:

Data owners are the most knowledgeable of the security needs of the business application for which they are responsible. The system developer, security manager and system custodian will have specific knowledge on limited areas but will not have full knowledge of the business issues that affect the level of security required. The steering committee does not perform at that level of detail on the operation.

NEW QUESTION # 332

Which of the following is MOST important to the effectiveness of an information security steering committee?

- A. The committee uses a risk management framework.
- B. The committee is comprised of representatives from senior management.
- C. The committee has strong regulatory knowledge.
- **D. The committee has cross-organizational representation.**

Answer: D

NEW QUESTION # 333

The MOST useful technique for maintaining management support for the information security program is:

- A. benchmarking the security programs of comparable organizations.
- B. identifying the risks and consequences of failure to comply with standards.
- **C. informing management about the security of business operations.**
- D. implementing a comprehensive security awareness and training program.

Answer: C

Explanation:

Explanation

= According to the CISM Review Manual, one of the key success factors for an information security program is to maintain management support and commitment. This can be achieved by providing regular reports to management on the security status of the organization, the effectiveness of the security controls, and the alignment of the security program with the business objectives and strategy. By informing management about the security of business operations, the information security manager can demonstrate the value and benefits of the security program, and ensure that management is aware of the security risks and issues that need to be addressed. This technique can also help to build trust and confidence between the information security manager and the senior management, and foster a culture of security within the organization¹ The other options are not as effective as informing management about the security of business operations.

Implementing a comprehensive security awareness and training program is important, but it is mainly targeted at the end users and staff, not the senior management. Identifying the risks and consequences of failure to comply with standards can help to justify the need for security controls, but it can also create a negative impression of the security program as being too restrictive or punitive. Benchmarking the security programs of comparable organizations can provide some insights and best practices, but it may not reflect the specific needs and context of the organization, and it may not be relevant or applicable to the management's expectations and priorities¹ References = 1: CISM Review Manual, 16th Edition, ISACA, 2020, pp. 28-29...

NEW QUESTION # 334

Which of the following would BEST enable a new information security manager to obtain senior management support for an information security governance program?

- A. Providing examples of information security incidents within the organization
- **B. Demonstrating the program's value to the organization**
- C. Providing the results of external audits

- D. Discussing governance programs found in similar organizations

Answer: B

Explanation:

Explanation

The best way to obtain senior management support for an information security governance program is to demonstrate the program's value to the organization, such as how it can help achieve business objectives, reduce operational risks, enhance resilience, and comply with regulations. Demonstrating the value of information security governance can help senior management understand the benefits and costs of the program, and motivate them to participate in the decision-making process. The other options, such as discussing governance programs in similar organizations, providing external audit results, or providing examples of incidents, may not be sufficient or persuasive enough to obtain senior management support, as they may not reflect the specific needs and goals of the organization. NEW QUESTION # 335

Which of the following is MOST appropriate to add to a dashboard for the purpose of illustrating an organization's risk level to senior management?

- A. Budget variance for information security
- **B. Risk heat map**
- C. Results of risk and control testing
- D. Number of reported incidents

Answer: B
