

SPLK-2002 Valid Dumps Files & SPLK-2002 Latest Dumps Files

BTW, DOWNLOAD part of TestSimulate SPLK-2002 dumps from Cloud Storage: <https://drive.google.com/open?id=16JFEp8oVKqyqzVtJX8r1S44XzvXI5S6D>

If you have TestSimulate's Splunk SPLK-2002 exam training materials, we will provide you with one-year free update. This means that you can always get the latest exam information. As long as the Exam Objectives have changed, or our learning material changes, we will update for you in the first time. We know your needs, and we will help you gain confidence to pass the Splunk SPLK-2002 Exam. You can be confident to take the exam and pass the exam.

Splunk SPLK-2002 Exam is an important certification for IT professionals who want to become experts in Splunk Enterprise architecture. SPLK-2002 exam tests the candidate's knowledge, skills, and abilities in various aspects of Splunk architecture, including deployment planning, troubleshooting, and optimization. Passing the exam is a crucial step towards becoming a certified Splunk Enterprise architect, which is a highly sought-after role in the IT industry.

Simulator For SPLK-2002 Certification Exams

We cannot overlook the importance of efficiency because we live in a society emphasize on it. So to get our latest SPLK-2002 exam torrent, just enter the purchasing website, and select your favorite version with convenient payment and you can download our latest SPLK-2002 exam torrent immediately within 5 minutes. This way you can avoid the problems in waiting for arrival of products and you can learn about the knowledge of SPLK-2002 Quiz guides in a short time. Latest SPLK-2002 exam torrent can vividly embody the spirits and effort we have put into them. And the power of our SPLK-2002 test prep permit you to apprehend the essence of the exam. All elites in this area vindicate the accuracy and efficiency of our SPLK-2002 quiz guides.

Splunk Enterprise Certified Architect Sample Questions (Q30-Q35):

NEW QUESTION # 30

A customer plans to ingest 600 GB of data per day into Splunk. They will have six concurrent users, and they also want high data availability and high search performance. The customer is concerned about cost and wants to spend the minimum amount on the

hardware for Splunk. How many indexers are recommended for this deployment?

- A. Two indexers clustered, assuming high availability is the greatest priority.
- B. Two indexers clustered, assuming a high volume of saved/scheduled searches.
- C. Three indexers not in a cluster, assuming a long data retention period.
- D. Two indexers not in a cluster, assuming users run many long searches.

Answer: A

Explanation:

Explanation

Two indexers clustered is the recommended deployment for a customer who plans to ingest 600 GB of data per day into Splunk, has six concurrent users, and wants high data availability and high search performance.

This deployment will provide enough indexing capacity and search concurrency for the customer's needs, while also ensuring data replication and searchability across the cluster. The customer can also save on the hardware cost by using only two indexers. Two indexers not in a cluster will not provide high data availability, as there is no data replication or failover. Three indexers not in a cluster will provide more indexing capacity and search concurrency, but also more hardware cost and no data availability. The customer's data retention period, number of long searches, or volume of saved/scheduled searches are not relevant for determining the number of indexers. For more information, see [Reference hardware] and [About indexer clusters and index replication] in the Splunk documentation.

NEW QUESTION # 31

Configurations from the deployer are merged into which location on the search head cluster member?

- A. SPLUNK_HOME/etc/system/local
- B. SPLUNK_HOME/etc/apps/APP_HOME/local
- C. SPLUNK_HOME/etc/apps/APP_HOME/default
- D. SPLUNK_HOME/etc/apps/search/default

Answer: B

Explanation:

Configurations from the deployer are merged into the SPLUNK_HOME/etc/apps/APP_HOME/local directory on the search head cluster member. The deployer distributes apps and other configurations to the search head cluster members in the form of a configuration bundle. The configuration bundle contains the contents of the SPLUNK_HOME/etc/shcluster/apps directory on the deployer. When a search head cluster member receives the configuration bundle, it merges the contents of the bundle into its own SPLUNK_HOME

/etc/apps directory. The configurations in the local directory take precedence over the configurations in the default directory. The SPLUNK_HOME/etc/system/local directory is used for system-level configurations, not app-level configurations. The SPLUNK_HOME/etc/apps/search/default directory is used for the default configurations of the search app, not the configurations from the deployer.

NEW QUESTION # 32

To improve Splunk performance, parallelIngestionPipelines setting can be adjusted on which of the following components in the Splunk architecture? (Select all that apply.)

- A. Cluster master
- B. Search head
- C. Forwarders
- D. Indexers

Answer: C,D

Explanation:

The parallelIngestionPipelines setting can be adjusted on the indexers and forwarders to improve Splunk performance. The parallelIngestionPipelines setting determines how many concurrent data pipelines are used to process the incoming data. Increasing the parallelIngestionPipelines setting can improve the data ingestion and indexing throughput, especially for high-volume data sources. The parallelIngestionPipelines setting can be adjusted on the indexers and forwarders by editing the limits.conf file. The parallelIngestionPipelines setting cannot be adjusted on the search head or the cluster master, because they are not involved in the

data ingestion and indexing process.

NEW QUESTION # 33

New data has been added to a monitor input file. However, searches only show older data. Which splunkd. log channel would help troubleshoot this issue?

- A. ChunkedLBProcessor
- B. ModularInputs
- C. TailingProcessor
- D. ArchiveProcessor

Answer: C

Explanation:

The TailingProcessor channel in the splunkd.log file would help troubleshoot this issue, because it contains information about the files that Splunk monitors and indexes, such as the file path, size, modification time, and CRC checksum. It also logs any errors or warnings that occur during the file monitoring process, such as permission issues, file rotation, or file truncation. The TailingProcessor channel can help identify if Splunk is reading the new data from the monitor input file or not, and what might be causing the problem. Option B is the correct answer. Option A is incorrect because the ModularInputs channel logs information about the modular inputs that Splunk uses to collect data from external sources, such as scripts, APIs, or custom applications. It does not log information about the monitor input file. Option C is incorrect because the ChunkedLBProcessor channel logs information about the load balancing process that Splunk uses to distribute data among multiple indexers. It does not log information about the monitor input file. Option D is incorrect because the ArchiveProcessor channel logs information about the archive process that Splunk uses to move data from the hot/warm buckets to the cold/frozen buckets. It does not log information about the monitor input file.

NEW QUESTION # 34

To reduce the captain's work load in a search head cluster, what setting will prevent scheduled searches from running on the captain?

- A. captain_is_adhoc_searchhead = true (on the current captain)
- B. adhoc_searchhead = true (on the current captain)
- C. adhoc_searchhead = true (on all members)
- D. captain_is_adhoc_searchhead = true (on all members)

Answer: A

NEW QUESTION # 35

.....

Desktop Splunk Enterprise Certified Architect (SPLK-2002) practice exam software also keeps track of the earlier attempted Splunk Enterprise Certified Architect (SPLK-2002) practice test so you can know mistakes and overcome them at each and every step. The Desktop Splunk Enterprise Certified Architect (SPLK-2002) practice exam software is created and updated in a timely by a team of experts in this field. If any problem arises, a support team is there to fix the issue.
