

Microsoft AZ-305 Certification Cost, Examcollection AZ-305 Vce

P.S. Free 2026 Microsoft AZ-305 dumps are available on Google Drive shared by PassCollection: <https://drive.google.com/open?id=1o554iAuo3dpCrfaTN8TAoEHkQBqa7KeI>

To help you prepare well, we offer three formats of our Microsoft AZ-305 exam product. These formats include Microsoft AZ-305 PDF dumps, Desktop Practice Tests, and web-based Microsoft AZ-305 practice test software. Your selection on the right tool to help you pass the AZ-305 Exam and get the according certification matters a lot for the right AZ-305 exam braindumps will spread you a lot of time and efforts.

The AZ-305 exam measures the candidate's knowledge and skills in designing solutions that meet customer requirements through Azure services, including storage solutions, compute infrastructure, security and network infrastructure, and Azure Active Directory. AZ-305 exam also evaluates the candidate's ability to develop solutions that leverage Azure services such as App Services, Containers, and Virtual Machines. AZ-305 exam is intended for candidates who have a solid understanding of Azure fundamentals and experience in designing solutions on the Azure platform.

The AZ-305 Exam is an excellent way for professionals to demonstrate their expertise in designing and implementing Azure infrastructure solutions. By earning this certification, professionals can enhance their career prospects and demonstrate their commitment to staying current with the latest cloud technologies and architectures.

Examcollection AZ-305 Vce | AZ-305 Exams Collection

The Microsoft AZ-305 exam offers a great opportunity for beginner and experienced to validate their expertise in a short time period. To do this they just need to pass the Designing Microsoft Azure Infrastructure Solutions AZ-305 Certification Exam which is not an easy task. And PassCollection offers latest AZ-305 exam practice, exam pattern and practice exam online.

Microsoft AZ-305 Certification Exam is an excellent way for professionals to demonstrate their expertise in designing Azure infrastructure solutions. It covers a broad range of topics and requires a deep understanding of Azure architecture and best practices. Achieving the certification can lead to better job opportunities, higher salaries, and more challenging projects.

Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q208-Q213):

NEW QUESTION # 208

You have an Azure subscription that contains the resources shown in the following table.

Name	Type	Description
App1	Azure App Service app	None
Workspace1	Log Analytics workspace	Configured to use a pay-as-you-go pricing tier
App1Logs	Log Analytics table	Hosted in Workspace1 Configured to use the Analytics Logs data plan

Log files from App1 are ingested to App 1 Logs. An average of 120 GB of log data is ingested per day.

You configure an Azure Monitor alert that will be triggered if the App1 logs contain error messages.

You need to minimize the Log Analytics costs associated with App1. The solution must meet the following requirements:

* Ensure that all the log files from App1 are ingested to App 1 Logs.

* Minimize the impact on the Azure Monitor alert.

Which resource should you modify, and which modification should you perform? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Resource:

Modification:

Answer:

Explanation:

Answer Area

Resource:

Modification:

Explanation:

Answer Area

Resource:
App1
App1Logs
Workspace1

Modification:
Change to a commitment pricing tier
Change to the Basic Logs data plan.
Set a daily cap.

NEW QUESTION # 209

You have an Azure subscription that contains an Azure key vault named KV1 and a virtual machine named VM1. VM1 runs Windows Server 2022: Azure Edition.

You plan to deploy an ASP.NET Core-based application named App1 to VM1.

You need to configure App1 to use a system-assigned managed identity to retrieve secrets from KV1. The solution must minimize development effort.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Configure App1 to use OAuth 2.0:
Client credentials grant flows
Authorization code grant flows
Client credentials grant flows
Implicit grant flows

Configure App1 to use a REST API call to retrieve an authentication token from the:
Azure Instance Metadata Service (IMDS) endpoint
OAuth 2.0 access token endpoint of Azure AD
OAuth 2.0 access token endpoint of Microsoft Identity Platform

Answer:

Explanation:

Answer Area

Configure App1 to use OAuth 2.0:
Client credentials grant flows
Authorization code grant flows
Client credentials grant flows
Implicit grant flows

Configure App1 to use a REST API call to retrieve an authentication token from the:
Azure Instance Metadata Service (IMDS) endpoint
OAuth 2.0 access token endpoint of Azure AD
OAuth 2.0 access token endpoint of Microsoft Identity Platform

NEW QUESTION # 210

You have an application that is used by 6,000 users to validate their vacation requests. The application manages its own credential. Users must enter a username and password to access the application. The application does NOT support identity providers.

You plan to upgrade the application to use single sign-on (SSO) authentication by using an Azure Active Directory (Azure AD) application registration.

Which SSO method should you use?

- A. header-based
- B. OpenID Connect
- C. SAML**
- D. password-based

Answer: C

NEW QUESTION # 211

You have an Azure web app named App1 and an Azure key vault named KV1.

App1 stores database connection strings in KV1.

App1 performs the following types of requests to KV1:

- * Get
- * List
- * Wrap
- * Delete
- * Unwrap
- * Backup
- * Decrypt
- * Encrypt

You are evaluating the continuity of service for App1.

You need to identify the following if the Azure region that hosts KV1 becomes unavailable:

- * To where will KV1 fail over?
- * During the failover, which request type will be unavailable?

What should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

To where will KV1 fail over?

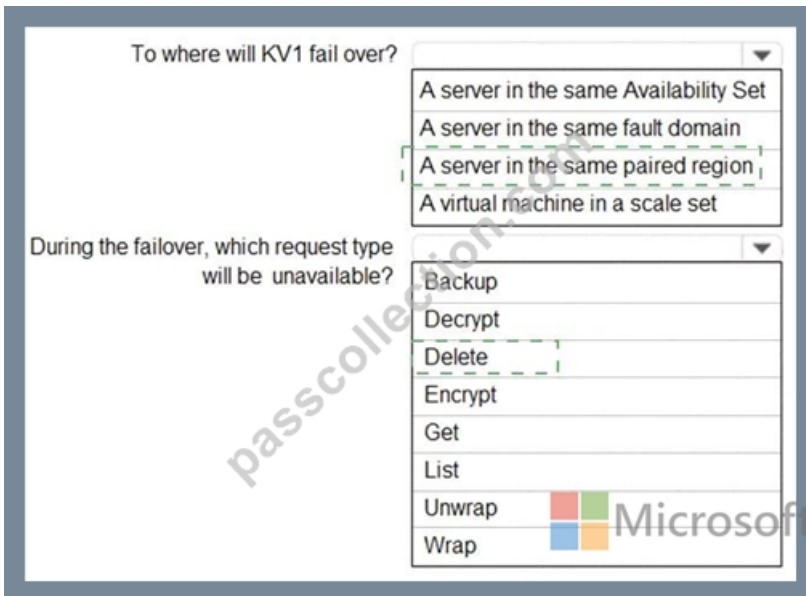

<input type="checkbox"/>	A server in the same Availability Set
<input type="checkbox"/>	A server in the same fault domain
<input type="checkbox"/>	A server in the same paired region
<input type="checkbox"/>	A virtual machine in a scale set

During the failover, which request type will be unavailable?

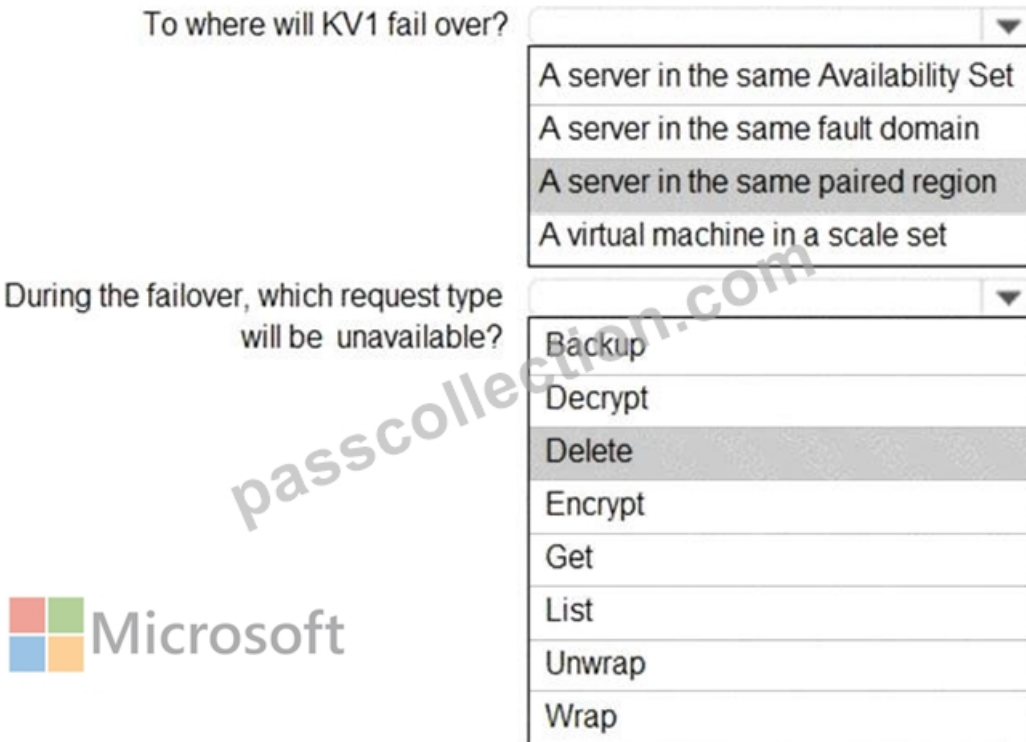

<input type="checkbox"/>	Backup
<input type="checkbox"/>	Decrypt
<input type="checkbox"/>	Delete
<input type="checkbox"/>	Encrypt
<input type="checkbox"/>	Get
<input type="checkbox"/>	List
<input type="checkbox"/>	Unwrap
<input type="checkbox"/>	Wrap

Answer:

Explanation:

Explanation:

Box 1: A server in the same paired region

The contents of your key vault are replicated within the region and to a secondary region at least 150 miles away, but within the same geography to maintain high durability of your keys and secrets.

Box 2: Delete

During failover, your key vault is in read-only mode. Requests that are supported in this mode are:

- * List certificates
- * Get certificates
- * List secrets
- * Get secrets
- * List keys
- * Get (properties of) keys
- * Encrypt
- * Decrypt
- * Wrap
- * Unwrap
- * Verify
- * Sign

* Backup

NEW QUESTION # 212

Your company develops Azure applications.

You need to recommend a solution for the deployment of Azure subscriptions. The solution must meet the following requirements:

What should you include in the recommendation?

- A. Provision resource groups.
- B. Provide consistent virtual machine and virtual network configurations.
- C. Support deployments across all Azure regions.
- **D. Create custom role-based access control (RBAC) roles.**

Answer: D

Explanation:

Resource groups: You can scope your deployment to a resource group. You use an Azure Resource Manager template (ARM template) for the deployment.

Regions: If you have a template spec in one region and want to move it to new region, you can export the template spec and redeploy it.

RBAC: Azure role-based access control (Azure RBAC) is the authorization system you use to manage access to Azure resources.

To grant access, you assign roles to users, groups, service principals, or managed identities at a particular scope. In addition to using Azure PowerShell or the Azure CLI, you can assign roles using Azure Resource Manager templates. Templates can be helpful if you need to deploy resources consistently and repeatedly. You can setup Virtual machines and virtual network configurations in an Azure Resource Manager template.
