CBSE Class 8 English Unit 1 Wit And Wisdom Chapter 1 The Wit That Won Hearts Important Question Answers from Poorvi Book

Let us discuss

I Rectify the following false statements from the text.

1. The queen insulted the king by speaking against the quality of his poem.
2. Tenali Rama immediately went to the king and convinced him to talk to the queen.
3. The courtiers admired the king's poem and praised his literary talent.
4. The ministers in the court were eager to hear Tenali Rama's idea about paddy cultivation.
5. The king never realised his mistake and continued to stay angry with the queen.

Ans.

1. The queen was confused by the unclear expression in the king's poem.
2. Tenali thought of a plan to resolve the fight between the royal couple.
3. The courtiers escaped listening to the king's poem on one pretext or other.
4. The ministers in the court mocked and laughed at Tenali's suggestion of using revolutionary seeds.
5. The king realised his mistake and patched up with the queen.

Let us think and reflect

I Read the extracts and answer the questions that follow.

1. "... The king thought I was disrespecting his poem and stormed off. Since then, he has not spoken to me. If I had known this would happen I would have chosen another day. Help me, please, Rama. Only you can help the king understand."

Rama nodded thoughtfully. "If you like, I will try my best to resolve this matter, Your Highness. But this needs a well-planned approach and I may need time to find the right strategy."

i) Why does the queen believe that only Tenali Rama can help the king understand?

Ans. Tenali is known for his wit and humour and so, the queen believes that only he can resolve the misunderstanding.

(ii) What does the queen's statement, "If I had known this would happen, I would have chosen another day", suggest about her feelings?

- A. She is angry at the king for overreacting.
- B. She regrets the unintended misunderstanding.
- C. She believes the poem was not worth listening to.
- D. She is worried that the king might punish her.

Ans. B. She regrets the unintended misunderstanding.

(iii) How does Tenali Rama's response reflect his wisdom and problem-solving skills?

Ans. Tenali proposed such an idea which itself made the king yawn and thus, he realised that yawning was a natural activity and not an offense to disrespect him.

(iv) Fill in the blank by choosing the correct option from those given in the brackets.

The king's reaction shows that he is sensitive and _____ (has a lot of faith/takes great pride) in his poetry.

Ans. takes great pride

DOWNLOAD the newest ExamBoosts CWSP-208 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1xDIWSjTMylVZB7IMWLgG5obsjNZGmHv8>

It is similar to the CWSP-208 desktop-based software, with all the elements of the desktop practice exam. This mock exam can be accessed from any browser and does not require installation. The Certified Wireless Security Professional (CWSP) (CWSP-208) questions in the mock test are the same as those in the real exam. And candidates will be able to take the web-based Certified Wireless Security Professional (CWSP) (CWSP-208) practice test immediately through any operating system and browsers.

The CWNP expert team use their knowledge and experience to make out the latest short-term effective training materials. This training materials is helpful to the candidates. It allows you to achieve the desired results in the short term. Especially those who study CWSP-208 while working, you can save a lot of time easily. ExamBoosts's training materials are the thing which you most wanted.

CWSP-208 Quiz | CWSP-208 Reliable Exam Cost

You can access our web-based Certified Wireless Security Professional (CWSP) (CWSP-208) practice exam from anywhere with an internet connection, and fit your studying into your busy schedule. No more traveling to a physical classroom, wasting time and money on gas or public transportation. With the web-based CWNP CWSP-208 Practice Test, you can evaluate and enhance your progress. Customizable web-based mock exam creates a real Certified Wireless Security Professional (CWSP) (CWSP-208) exam environment and works on all operating systems.

CWNP CWSP-208 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Security Policy: This section of the exam measures the skills of a Wireless Security Analyst and covers how WLAN security requirements are defined and aligned with organizational needs. It emphasizes evaluating regulatory and technical policies, involving stakeholders, and reviewing infrastructure and client devices. It also assesses how well high-level security policies are written, approved, and maintained throughout their lifecycle, including training initiatives to ensure ongoing stakeholder awareness and compliance.
Topic 2	<ul style="list-style-type: none"> • Vulnerabilities, Threats, and Attacks: This section of the exam evaluates a Network Infrastructure Engineer in identifying and mitigating vulnerabilities and threats within WLAN systems. Candidates are expected to use reliable information sources like CVE databases to assess risks, apply remediations, and implement quarantine protocols. The domain also focuses on detecting and responding to attacks such as eavesdropping and phishing. It includes penetration testing, log analysis, and using monitoring tools like SIEM systems or WIPS • WIDS. Additionally, it covers risk analysis procedures, including asset management, risk ratings, and loss calculations to support the development of informed risk management plans.
Topic 3	<ul style="list-style-type: none"> • WLAN Security Design and Architecture: This part of the exam focuses on the abilities of a Wireless Security Analyst in selecting and deploying appropriate WLAN security solutions in line with established policies. It includes implementing authentication mechanisms like WPA2, WPA3, 802.1X • EAP, and guest access strategies, as well as choosing the right encryption methods, such as AES or VPNs. The section further assesses knowledge of wireless monitoring systems, understanding of AKM processes, and the ability to set up wired security systems like VLANs, firewalls, and ACLs to support wireless infrastructures. Candidates are also tested on their ability to manage secure client onboarding, configure NAC, and implement roaming technologies such as 802.11r. The domain finishes by evaluating practices for protecting public networks, avoiding common configuration errors, and mitigating risks tied to weak security protocols.
Topic 4	<ul style="list-style-type: none"> • Security Lifecycle Management: This section of the exam assesses the performance of a Network Infrastructure Engineer in overseeing the full security lifecycle—from identifying new technologies to ongoing monitoring and auditing. It examines the ability to assess risks associated with new WLAN implementations, apply suitable protections, and perform compliance checks using tools like SIEM. Candidates must also demonstrate effective change management, maintenance strategies, and the use of audit tools to detect vulnerabilities and generate insightful security reports. The evaluation includes tasks such as conducting user interviews, reviewing access controls, performing scans, and reporting findings in alignment with organizational objectives.

CWNP Certified Wireless Security Professional (CWSP) Sample Questions (Q90-Q95):

NEW QUESTION # 90

Given: You are the WLAN administrator in your organization and you are required to monitor the network and ensure all active WLANs are providing RSNs. You have a laptop protocol analyzer configured.

In what frame could you see the existence or non-existence of proper RSN configuration parameters for each BSS through the RSN IE?

- A. Probe request
- B. CTS
- C. Beacon
- D. Data frames
- E. RTS

Answer: C

Explanation:

The RSN (Robust Security Network) Information Element (IE) is used to advertise the security capabilities of a wireless network, particularly for WPA2 and WPA3 networks. This RSN IE is contained in Beacon and Probe Response management frames, not in Probe Request, RTS, CTS, or Data frames. The Beacon frame is sent periodically by an AP to announce its presence and includes

critical information about the BSS, including security settings like the RSN IE.

You would use a protocol analyzer to capture Beacon frames and inspect the RSN IE field to confirm if a BSS is properly configured to use RSN protections such as WPA2-Enterprise or WPA2-Personal.

CWNP CWSP-208 Objectives: "802.11 Frame Analysis" and "Understanding RSN Information Element Fields"

NEW QUESTION # 91

Given: The ABC Corporation currently utilizes an enterprise Public Key Infrastructure (PKI) to allow employees to securely access network resources with smart cards. The new wireless network will use WPA2- Enterprise as its primary authentication solution. You have been asked to recommend a Wi-Fi Alliance-tested EAP method.

What solutions will require the least change in how users are currently authenticated and still integrate with their existing PKI?

- A. EAP-FAST
- B. PEAPv0/EAP-TLS
- C. LEAP
- **D. EAP-TLS**
- E. PEAPv0/EAP-MSCHAPv2
- F. EAP-TTLS/MSCHAPv2

Answer: D

Explanation:

ABC Corporation already uses PKI and smart cards. EAP-TLS:

Is a certificate-based authentication protocol.

Integrates seamlessly with PKI infrastructure.

Is supported and certified by the Wi-Fi Alliance.

Incorrect:

A). EAP-FAST uses PACs, not certificates.

C). PEAPv0/EAP-MSCHAPv2 does not use certificates on the client side and is less secure.

D). LEAP is deprecated and insecure.

E). PEAPv0/EAP-TLS is not a standardized combination.

F). EAP-TTLS/MSCHAPv2 requires password-based authentication inside a tunnel, not certificate-based authentication.

CWNP WPA2-Enterprise Integration Guidelines

NEW QUESTION # 92

Which one of the following describes the correct hierarchy of 802.1X authentication key derivation?

- A. After successful EAP authentication, the RADIUS server generates a PMK. A separate key, the MSK, is derived from the AAA key and is hashed with the PMK to create the PTK and GTK.
- **B. The MSK is generated from the 802.1X/EAP authentication. The PMK is derived from the MSK. The PTK is derived from the PMK, and the keys used for actual data encryption are a part of the PTK.**
- C. The PMK is generated from a successful mutual EAP authentication. When mutual authentication is not used, an MSK is created. Either of these two keys may be used to derive the temporal data encryption keys during the 4-way handshake.
- D. If passphrase-based client authentication is used by the EAP type, the PMK is mapped directly from the user's passphrase. The PMK is then used during the 4-way handshake to create data encryption keys.

Answer: B

Explanation:

In 802.1X/EAP authentication:

The EAP method (e.g., EAP-TLS, PEAP) results in the generation of a Master Session Key (MSK).

The Pairwise Master Key (PMK) is derived from the MSK.

The Pairwise Transient Key (PTK) is derived from the PMK using nonces and MAC addresses during the 4-Way Handshake.

The PTK includes the actual keys used for data encryption.

Incorrect:

B). This applies to WPA/WPA2-Personal, not 802.1X/EAP.

- C). The RADIUS server sends the MSK, not the PMK directly.
- D). The MSK is always derived during EAP authentication, mutual or not.

IEEE 802.11i Specification

NEW QUESTION # 93

When implementing a WPA2-Enterprise security solution, what protocol must the selected RADIUS server support?

- A. LDAP
- B. LWAPP, GRE, or CAPWAP
- C. CCMP and TKIP
- D. IPSec/ESP
- **E. EAP**

Answer: E

Explanation:

WPA2-Enterprise relies on the IEEE 802.1X framework for authentication, which requires the use of the Extensible Authentication Protocol (EAP). The RADIUS server must support EAP to facilitate the exchange of authentication credentials and method negotiation between the client (supplicant) and the authentication server.

Incorrect:

- A). LWAPP, GRE, and CAPWAP are used between APs and controllers-not for client authentication.
- B). IPSec/ESP is a VPN protocol, not relevant here.
- D). CCMP and TKIP are encryption protocols used between clients and APs, not within the RADIUS server.
- E). LDAP may be queried by the RADIUS server, but it is not sufficient on its own-it doesn't replace EAP.

CWNP AAA Architecture Overview

NEW QUESTION # 94

What protocols allow a network administrator to securely manage the configuration of WLAN controllers and access points? (Choose 2)

- A. Telnet
- B. SNMPv1
- C. TFTP
- D. FTP
- **E. SSHv2**
- **F. HTTPS**

Answer: E,F

Explanation:

Secure configuration of network devices requires encrypted management protocols:

HTTPS: Provides secure web-based GUI access using TLS encryption.

SSHv2: Provides secure CLI access using encrypted channels.

Incorrect:

- A). SNMPv1 is not secure - lacks encryption and authentication.
- C). Telnet sends credentials and commands in clear text.
- D). TFTP is used for file transfer without encryption or authentication.
- E). FTP is also insecure-transmits credentials in plain text.
