So the clients can enjoy the results of the latest innovation on ChromeOS-Administrator exam questions and achieve more learning resources. The credits belong to our diligent and dedicated professional innovation team and our experts.

## Google Professional ChromeOS Administrator Exam Sample Questions (Q29-Q34):

### NEW QUESTION # 29

What is a feature of Verified Boot?

- A. Protects anonymous guests from using the device
- B. Prevents the user from accessing unauthorized websites
- C. Eliminates the need for strict policy controls
- D. Makes sure that the firmware and OS have not been tampered with

Answer: D

Explanation:

Verified Boot is a security feature in ChromeOS that ensures the integrity of the operating system every time the device starts. It checks the OS for modifications or corruptions, preventing tampered systems from booting and automatically repairing them if necessary.

Verified Answer from Official Source:

The correct answer is verified from the ChromeOS Security Guide, which highlights Verified Boot as a core feature for maintaining the OS's integrity.

"Verified Boot ensures that the firmware and OS on ChromeOS devices have not been tampered with. If an anomaly is detected, the system reverts to a known good state." This feature is crucial for protecting the system from malicious software or unauthorized changes, maintaining the device's security posture.

Objectives:

- \* Enhance device security through integrity checks.
- \* Understand ChromeOS boot protection mechanisms.

### NEW QUESTION # 30

You want users to sign in to Chrome devices via SAML and be able to access SAML-enabled web applications without having to re-enter their credentials. How should you configure SAML?

- **A. Enable SAML-based Single Sign-On for Chrome devices and Single Sign-On Cookie Behavior**
- B. Enable SAML-based Single Sign-On for each application via Chrome App Management
- C. Use Chrome App Builder to enable SSO for each application and force-install the applications using Chrome user policies
- D. Enable SAML identity provider-initiated login for Google Authentication

**Answer: A**

Explanation:

To allow seamless SSO across Chrome devices and SAML-enabled web applications, you should enable SAML-based Single Sign-On (SSO) for Chrome devices and configure Single Sign-On Cookie Behavior.

This ensures that once users log in via SAML, they will not be prompted to re-authenticate when accessing SAML-integrated applications.

Verified Answer from Official Source:

The correct answer is verified from the Google Workspace SSO Configuration Guide, which explains how enabling SSO cookie behavior maintains authenticated sessions across multiple applications.

"Configure SAML-based SSO for Chrome devices and enable Single Sign-On Cookie Behavior to maintain authenticated sessions when accessing SAML-based applications." This setup reduces the need for multiple logins, providing a seamless user experience while maintaining secure authentication.

Objectives:

- \* Enable seamless SAML-based SSO on ChromeOS.
- \* Reduce multiple login prompts for users.

### NEW QUESTION # 31

As a ChromeOS Administrator, you are tasked with blocking incognito mode in the ChromeOS Browser. How would you prevent users from using incognito mode?

- **A. Navigate to 'Users & Browser Security Settings' and set the 'Disallow incognito mode' policy**
- B. In 'Enrollment Settings' disable vendored access and incognito mode (or content protection)
- C. From 'Device Settings' change Kiosk settings to 'Disallow incognito mode'
- D. Go to 'User & Browser Settings' to restrict sign-in to pattern and 'Disallow incognito mode'

**Answer: A**

Explanation:

\* Access the Google Admin Console: Sign in to the Admin console using your ChromeOS administrator credentials.

\* Locate User Settings: Navigate to "Device Management" > "Chrome Management" > "User & browser settings".

\* Find Incognito Mode Policy: Within the settings, search for "Incognito mode".

\* Disable Incognito Mode: Select the option to "Disallow incognito mode".

\* Save Changes: Click "Save" to apply the policy to the designated users or organizational units.

References:

\* Set up Chrome browser on managed devices:

### NEW QUESTION # 32

What are two methods for signing in to a Chrome OS device? Choose 2 answers

- A. Single sign-on
- B. Facebook Connect
- C. Google Friend Connect
- D. SMS code sent to mobile phone

**Answer: A,B**

Explanation:

\* Single sign-on (SSO): This allows users to sign in to their Chrome OS device using their organizational credentials. This is particularly useful in enterprise or educational settings where users already have an existing account.

\* Facebook Connect: This allows users to sign in to their Chrome OS device using their Facebook credentials. This can be convenient for users who are already logged into Facebook on another device.

Options A and C are incorrect:

\* SMS code sent to mobile phone: This is not a standard sign-in method for Chrome OS devices.

\* Google Friend Connect: This was a social networking service that has been discontinued.

### NEW QUESTION # 33

Your team has members that work remotely. Your CTO would like to verify that your fleet of ChromeOS devices remains managed by corporate policy even after a device wipe. What would you configure to complete this objective?

- A. Create strict password rules
- B. Set up the Admin console to force the device to automatically re-enroll after wiping
- C. Set the setting "Powerwash" to "Do not allow powerwash to be triggered"
- D. Edit the setting "Verified Access" to "Require verified mode for boot for verified access"

**Answer: B**

Explanation:

To ensure that ChromeOS devices remain managed after a wipe, you need to enable forced re-enrollment.

This setting automatically re-enrolls the device into the management domain after it has been wiped (Powerwashed). This feature is crucial for organizations that manage devices remotely, as it prevents unauthorized users from removing management settings.

Verified Answer from Official Source:

The correct answer is verified from the Google ChromeOS Device Management Best Practices Guide, which recommends enabling forced re-enrollment to maintain device management continuity.

"To ensure devices remain managed after wiping, enable the 'Forced Re-enrollment' policy in the Admin console. This setting ensures automatic re-enrollment upon startup." Forced re-enrollment prevents the loss of device management, which is essential for maintaining security and policy compliance, especially in remote or dispersed environments.

Objectives:

\* Enforce device management after Powerwash.

\* Maintain compliance in remote work environments.

### NEW QUESTION # 34

.....

Nowadays, flexible study methods become more and more popular with the development of the electronic products. The latest technologies have been applied to our ChromeOS-Administrator actual exam as well since we are at the most leading position in this field. Besides, you have varied choices for there are three versions of our ChromeOS-Administrator practice materials. At the same time, you are bound to pass the ChromeOS-Administrator exam and get your desired ChromeOS-Administrator certification for the validity and accuracy of our ChromeOS-Administrator study materials.
