First-hand Google New Professional-Cloud-Database-Engineer Exam Sample: Google Cloud Certified - Professional Cloud Database Engineer - Mock Professional-Cloud-Database-Engineer Exam

The system of our Professional-Cloud-Database-Engineer latest exam file is great. It is developed and maintained by our company's professional personnel and is dedicated to provide the first-tier service to the clients. Our system updates the Professional-Cloud-Database-Engineer exam questions periodically and frequently to provide more learning resources and responds to the clients' concerns promptly. Our system will supplement new Professional-Cloud-Database-Engineer latest exam file and functions according to the clients' requirements and surveys the clients' satisfaction degrees about our Professional-Cloud-Database-Engineer cram materials. Our system will do an all-around statistics of the sales volume of our Professional-Cloud-Database-Engineer exam questions at home and abroad and our clients' positive feedback rate of our Professional-Cloud-Database-Engineer latest exam file. Our system will deal with the clients' online consultation and refund issues promptly and efficiently. So our system is great.

Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q90-Q95):

NEW QUESTION # 90
You finished migrating an on-premises MySQL database to Cloud SQL. You want to ensure that the daily export of a table, which was previously a cron job running on the database server, continues. You want the solution to minimize cost and operations overhead. What should you do?

- A. Set up Cloud Composer, and create a task to export the table daily.
- B. Create a streaming Datatlow job to export the table.
- C. Use Cloud Scheduler and Cloud Functions to run the daily export.
- D. Run the cron job on a Compute Engine instance to continue the export.

Answer: A

NEW QUESTION # 91
Your organization is running a critical production database on a virtual machine (VM) on Compute Engine.
The VM has an ext4-formatted persistent disk for data files. Thedatabase will soon run out of storage space.
You need to implement a solution that avoids downtime. What should you do?

- A. In the Google Cloud Console, create a new persistent disk attached to the VM, and configure the database service to move the files to the new disk.
- B. In the Google Cloud Console, create a snapshot of the persistent disk, restore the snapshot to a new larger disk, unmount the old disk, mount the new disk, and restart the database service.
- C. In the Google Cloud Console, increase the size of the persistent disk, and use the resize2fs command to extend the disk.
- D. In the Google Cloud Console, increase the size of the persistent disk, and use the fdisk command to verify that the new space is ready to use

Answer: C

Explanation:
https://cloud.google.com/compute/docs/disks/resize-persistent-disk#resize_partitions

NEW QUESTION # 92
Your company is developing a new global transactional application that must be ACID-compliant and have 99.999% availability. You are responsible for selecting the appropriate Google Cloud database to serve as a datastore for this new application. What should you do?

- A. Use Cloud Spanner.
- B. Use Firestore.
- C. Use Bigtable.
- D. Use Cloud SQL.

Answer: D

NEW QUESTION # 93
You are migrating an on-premises application to Google Cloud. The application requires a high availability (HA) PostgreSQL database to support business-critical functions. Your company's disaster recovery strategy requires a recovery time objective (RTO) and recovery point objective (RPO) within 30 minutes of failure.
You plan to use a Google Cloud managed service. What should you do to maximize uptime for your application?

- A. Deploy Cloud SQL for PostgreSQL in a regional configuration with HA enabled. Create a cross-region read replica, and promote the read replica as the primary node for disaster recovery.
- B. Deploy Cloud SQL for PostgreSQL in a regional configuration with HA enabled. Take periodic backups, and use this backup to restore to a new Cloud SQL for PostgreSQL instance in another region during a disaster recovery event.
- C. Migrate the PostgreSQL database to multi-regional Cloud Spanner so that a single region outage will not affect your application. Update the schema to support Cloud Spanner data types, and refactor the application.
- D. Deploy Cloud SQL for PostgreSQL in a regional configuration. Create a read replica in a different zone in the same region and a read replica in another region for disaster recovery.

Answer: A

Explanation:
The best answer is deploy an HA configuration and have a read replica you could promote to the primary in a different region

NEW QUESTION # 94
Your organization has a ticketing system that needs an online marketing analytics and reporting application. You need to select a relational database that can manage hundreds of terabytes of data to support this new application. Which database should you use?

- A. Cloud SQL
- B. BigQuery
- C. Cloud Spanner
- D. Bigtable

Answer: B

NEW QUESTION # 95
.....

Google certification can improve companies' competition, enlarge companies' business products line and boost IT staff constant learning. Many companies may choose Professional-Cloud-Database-Engineer valid exam study guide for staff while they are urgent to need one engineer with a useful certification so that they can get orders from this Google or get the management agency right. Our Professional-Cloud-Database-Engineer valid exam study guide will be the best valid choice for them.
