

C_BW4H_2505최신탕덤프인기시험기출문제자료

NOTE: Each correct selection is worth one point.

Required secrets:

- Certificate
- Personal access token
- Shared Access Authorization token
- Username and password

Storage location:

- Azure Data Lake
- Azure Key Vault
- Azure Storage with HTTP access
- Azure Storage with HTTPS access

Answer:

Required secrets:

- Certificate
- Personal access token
- Shared Access Authorization token**
- Username and password

Storage location:

- Azure Data Lake
- Azure Key Vault
- Azure Storage with HTTP access
- Azure Storage with HTTPS access**

Explanation:
 Every request made against a storage service must be authorized, unless the request is for a blob or container resource that has been made available for public or signed access. One option for authorizing a request is by using Shared Key.
 Scenario: The mobile applications must be able to call the share pricing service of the existing retirement fund management system. Until the system is upgraded, the service will only support basic authentication over HTTPS.
 The investment planning applications suite will include one multi-tier web application and two iOS mobile application. One mobile application will be used by employees; the other will be used by customers.
 Reference: <https://docs.microsoft.com/en-us/rest/api/storageservices/authorize-with-shared-key>

Question: 3

ExamPassdump에서 발췌한 SAP인증 C_BW4H_2505덤프는 전문적인 IT인사들이 연구정리한 최신버전 SAP인증 C_BW4H_2505시험에 대비한 공부자료입니다. SAP인증 C_BW4H_2505 덤프에 있는 문제만 이해하고 공부하신다면 SAP인증 C_BW4H_2505시험을 한방에 패스하여 자격증을 쉽게 취득할 수 있을것입니다.

SAP C_BW4H_2505 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> SAP BW 4HANA Project and the Modeling Process: This section of the exam assesses how Data Engineers guide and contribute to SAP BW 4HANA projects. It includes knowledge of modeling workflows, project lifecycle stages, and collaboration strategies within project teams.
주제 2	<ul style="list-style-type: none"> SAP BW 4HANA Data Flow: This section of the exam measures the practical ability of SAP Consultants to load data within the SAP BW 4HANA environment. It assesses familiarity with data movement and transformation processes across different layers of the system.

주제 3	<ul style="list-style-type: none"> • SAP BW • 4HANA Modeling: This section targets the skills of Data Engineers in selecting appropriate modeling options and applying best practices like LSA++ within SAP BW • 4HANA. It focuses on designing scalable, high-performing data models.
주제 4	<ul style="list-style-type: none"> • Data Acquisition into SAP BW • 4HANA: This section tests how Data Engineers manage data integration into SAP BW • 4HANA from multiple sources. It covers essential knowledge of tools and processes used for data extraction, transformation, and loading into the SAP environment.
주제 5	<ul style="list-style-type: none"> • Native SAP HANA Modeling: This section evaluates the ability of SAP Consultants to describe and apply native modeling options in SAP HANA. It emphasizes understanding how to build optimized data structures directly within the HANA platform.
주제 6	<ul style="list-style-type: none"> • Data Acquisition into SAP HANA: This section evaluates the capacity of SAP Consultants to integrate various data sources into SAP HANA. It assesses their ability to understand different ingestion techniques and ensure data accessibility for processing.
주제 7	<ul style="list-style-type: none"> • Fundamentals: This section of the exam measures the foundational understanding of SAP Consultants and covers essential terms and concepts related to SAP BW • 4HANA and SAP Business Data Cloud. It focuses on the core framework and architecture necessary to navigate and work with these platforms.

C_BW4H_2505최신허덤프 퍼펙트한 덤프로 시험패스하여 자격증을 취득하기

ExamPassdump에서 판매하고 있는 SAP C_BW4H_2505인증 시험자료는 시중에서 가장 최신버전으로서 시험적중율이 100%에 가깝습니다. SAP C_BW4H_2505덤프자료를 항상 최신버전으로 보장해드리기 위해 SAP C_BW4H_2505 시험문제가 변경되면 덤프자료를 업데이트하도록 최선을 다하고 있습니다. ExamPassdump는 여러분이 자격증을 취득하는 길에서 없어서는 안되는 동반자로 되어드릴것을 약속해드립니다.

최신 SAP Certified Associate C_BW4H_2505 무료 샘플문제 (Q48-Q53):

질문 # 48

You want to build an SAP HANA HDI calculation view of data category CUBE, but you get a "no measure defined" error. For the business requirement, a measure does not make sense. Besides changing the data category to DIMENSION, what do you have to do?

- A. Switch from an aggregation node to a projection node.
- B. Switch from an aggregation node to a star join node.
- C. Switch from a projection node to an aggregation node.
- D. Switch from a projection node to a star join node.

정답: C

질문 # 49

What are some of the advantages of using SAP BW/4HANA business content? Note: There are 2 correct answers to this question.

- A. Ability to modify business content objects to meet customer specific requirements
- B. Automatic generation of Analysis Authorizations during SAP BW/4HANA content activation
- C. Automatic content activation during installation of SAP BW/4HANA
- D. Accelerated SAP BW/4HANA implementation using ready-made models

정답: A,D

설명:

SAP BW/4HANA business content refers to pre-delivered, ready-to-use data models, extractors, transformations, and reports provided by SAP. These objects are designed to accelerate the implementation of SAP BW/4HANA by offering standardized solutions for common business scenarios. Business content is particularly valuable because it reduces the effort required to build custom data models from scratch.

* Accelerated SAP BW/4HANA Implementation Using Ready-Made Models (C): One of the primary advantages of SAP BW/4HANA business content is that it provides pre-built data models, InfoObjects, DataSources, and transformations that align with standard business processes. These ready-made models can be activated and used immediately, significantly reducing the time and effort required to implement SAP BW/4HANA. For example:

* Pre-configured DataSources for extracting data from SAP ERP systems.

* Standardized InfoProviders (e.g., Advanced DataStore Objects, CompositeProviders) for reporting and analytics.

* Predefined queries and dashboards for common use cases like financial reporting or sales analysis.

Advantages of Using SAP BW/4HANA Business Content: By leveraging these pre-delivered objects, organizations can focus on customizing and extending the solution to meet their specific needs rather than starting from scratch.

* Ability to Modify Business Content Objects to Meet Customer-Specific Requirements (D): While SAP BW/4HANA business content provides a solid foundation, it is not intended to be used as-is in every scenario. SAP allows customers to modify and enhance business content objects to align with their unique business requirements. For example:

* You can copy and adapt pre-delivered transformations to include custom logic.

* You can extend InfoObjects or create new ones based on the delivered content.

* Queries and reports can be customized to reflect specific KPIs or business metrics.

This flexibility ensures that business content serves as a starting point rather than a rigid framework, enabling organizations to tailor the solution to their needs.

* Automatic Content Activation During Installation of SAP BW/4HANA (A): This statement is incorrect because SAP BW/4HANA business content is not automatically activated during installation. Instead, customers must manually activate the relevant business content objects based on their requirements.

This selective activation ensures that only the necessary objects are deployed, avoiding unnecessary clutter in the system.

* Automatic Generation of Analysis Authorizations During SAP BW/4HANA Content Activation (B):

This statement is also incorrect. While SAP BW/4HANA provides tools and frameworks for managing analysis authorizations, they are not automatically generated during content activation. Customers must configure and maintain analysis authorizations separately to ensure proper access control for reporting users.

Incorrect Options:

SAP Data Engineer - Data Fabric Context: In the context of SAP Data Engineer - Data Fabric, leveraging SAP BW/4HANA business content is a key strategy for accelerating data integration and transformation projects. The pre-delivered models and objects enable rapid deployment of standardized data pipelines, while the ability to customize these objects ensures alignment with specific business needs. This approach supports the broader goals of the data fabric, such as seamless data connectivity, governance, and scalability.

For further details, you can refer to the following resources:

* SAP BW/4HANA Business Content Documentation: Explains the scope and usage of pre-delivered content.

* SAP Best Practices for SAP BW/4HANA: Provides guidance on implementing and customizing business content.

* SAP Learning Hub: Offers training on SAP BW/4HANA implementation and business content utilization.

By selecting C (Accelerated SAP BW/4HANA implementation using ready-made models) and D (Ability to modify business content objects to meet customer-specific requirements), you highlight the key benefits of using SAP BW/4HANA business content effectively.

질문 # 50

In an SAP HANA HDI Calculation View, you need to combine attributes data (left table) and the data's language-dependent texts (right table) using a text join. What should you select to restrict the result set to the logon language?

- A. The language column in the left table
- B. The language column in the right table
- C. The join cardinality between both tables
- D. The logon language in the left table

정답: B

질문 # 51

Where is the button that automatically generates a process chain?

- A. In the app called Process Chain Editor
- B. In the editor of a data transfer process
- **C. In the editor of a data flow object**
- D. In the SAP GUI transaction for Process Chain Maintenance

정답: C

질문 # 52

You need to derive an architecture overview model from a key figure matrix. Which is the first step you need to take?

- **A. Identify sources.**
- B. Define data marts.
- C. Identify transformations.
- D. Analyze storage requirements.

정답: A

설명:

Deriving an architecture overview model from a key figure matrix is a critical step in designing an SAP BW /4HANA solution. The first step in this process is to identify the sources of the data that will populate the key figures. Understanding the data sources ensures that the architecture is built on a solid foundation and can meet the reporting and analytical requirements.

* Identify sources (Option B): Before designing the architecture, it is essential to determine where the data for the key figures originates. This includes identifying:

* Source systems: ERP systems, external databases, flat files, etc.

* Data types: Transactional data, master data, metadata, etc.

* Data quality: Ensuring the sources provide accurate and consistent data.

* Identifying sources helps define the data extraction, transformation, and loading (ETL) processes required to populate the key figures in the architecture.

* Identify transformations (Option A): Transformations are applied to the data after it has been extracted from the sources. While transformations are an important part of the architecture, they cannot be defined until the sources are identified.

* Analyze storage requirements (Option C): Storage requirements depend on the volume and type of data being processed. However, these requirements can only be determined after the sources and data flows are understood.

* Define data marts (Option D): Data marts are designed to serve specific reporting or analytical purposes.

Defining data marts is a later step in the architecture design process and requires a clear understanding of the sources and transformations.

* Identify sources: Determine the origin of the data.

* Map data flows: Define how data moves from the sources to the target system.

* Apply transformations: Specify the logic for cleansing, enriching, and aggregating the data.

* Design storage layers: Decide how the data will be stored (e.g., ADSOs, InfoCubes).

* Define data marts: Create specialized structures for reporting and analytics.

* Source Identification: Identifying sources is the foundation of any data architecture. Without knowing where the data comes from, it is impossible to design an effective ETL process or storage model.

* Key Figure Matrix: A key figure matrix provides a high-level view of the metrics and dimensions required for reporting. It serves as a starting point for designing the architecture.

* SAP BW/4HANA Modeling Guide: This guide explains the steps involved in designing an architecture, including source identification and data flow mapping.

* Link: SAP BW/4HANA Documentation

* SAP Note 2700980 - Best Practices for Architecture Design in SAP BW/4HANA: This note provides recommendations for designing scalable and efficient architectures in SAP BW/4HANA.

Why Other Options Are Incorrect: Steps to Derive an Architecture Overview Model: Key Points About Architecture

Design: References to SAP Data Engineer - Data Fabric: By starting with source identification, you ensure that the architecture overview model is grounded in the actual data landscape, enabling a robust and effective solution design.
