- A. counselors become focused on their own personal issues.
- **B. counselors lose objectivity in counseling relationships.**
- C. clients ask counselors to treat them as others have in the past.

**Answer: B**

Ethical counseling requires counselors to monitor their own emotional reactions and maintain professional boundaries at all times.

- A. When testing and assessing children, the administrator must consider the child's developmental stage to ensure reliability of the instrument used, while developmental age is not a consideration when assessing adults.
- B. The testing and assessment of children is a much simpler process than that of testing and assessing adults, which can require multiple sessions over several days.
- C. Assessment of children must follow prescribed scripts, while an assessor of adults may ad lib questioning, depending upon earlier responses.

**Answer: A**

Assessment and testing of children must account for the child's developmental stage to ensure the instrument is reliable and valid for their age. For adults, developmental stage is typically less variable and thus less of a concern when selecting assessment tools.
