

PassLeaderVCE GH-900 Exam Questions Demo is Available for Instant Download Free of Cost

BONUS!!! Download part of PassLeaderVCE GH-900 dumps for free: <https://drive.google.com/open?id=1C101E08Ewwl4HpyNg9l0GcoUuhfz9wyY>

The aim of our design is to improving your learning and helping you gains your certification in the shortest time. If you long to gain the certification, our GitHub Foundations guide torrent will be your best choice. Many experts and professors consist of our design team, you do not need to be worried about the high quality of our GH-900 test torrent. Now our pass rate has reached 99 percent. If you choose our GH-900 study torrent as your study tool and learn it carefully, you will find that it will be very soon for you to get the GitHub Foundations certification in a short time. Do not hesitate and buy our GH-900 test torrent, it will be very helpful for you.

If you purchase GH-900 exam questions and review it as required, you will be bound to successfully pass the exam. And if you still don't believe what we are saying, you can log on our platform right now and get a trial version of GH-900 study engine for free to experience the magic of it. Of course, if you encounter any problems during free trialing, feel free to contact us and we will help you to solve all problems on the GH-900 practice engine.

PDF GH-900 Download, GH-900 Reliable Exam Prep

GH-900 exam certification is very useful in your daily work in IT industry. When you decide to attend the GH-900 exam test, it is not an easy thing at begin. First, you should have a detail study plan and have a basic knowledge of the GH-900 actual test. Here, Microsoft GH-900 test pdf dumps are recommended to you for preparation. GH-900 Pdf Torrent will tell you the basic question types in the actual test and give the explanations where is available. With the help of the GH-900 vce dumps, you will be confident to attend the GH-900 actual test and get your certification with ease.

Microsoft GH-900 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Privacy, Security, and Administration: This domain measures skills of Security Administrators and Organization Managers in securing and administering GitHub environments. It covers ensuring repository security through branch protection rules, using security tools like Dependabot, managing access and permissions at repository and organization levels, creating and managing organizations, setting up organization-level security, and overseeing teams and members.
Topic 2	<ul style="list-style-type: none">Benefits of the GitHub Community: This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects.

Topic 3	<ul style="list-style-type: none"> • Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI • CD pipeline implementation. Candidates also learn GitHub's tools and best practices for conducting and managing code reviews.
Topic 4	<ul style="list-style-type: none"> • Collaboration Features: This section measures skills of Software Engineers and Team Leads and covers collaborative workflows using GitHub. It includes forking repositories, creating and managing pull requests, reviewing and merging code changes, and using GitHub Actions to support CI • CD pipelines. Candidates also explore project management features such as creating and managing issues, using labels, milestones, and project boards, and tracking progress through GitHub Projects.
Topic 5	<ul style="list-style-type: none"> • Working with GitHub Repositories: This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.
Topic 6	<ul style="list-style-type: none"> • Introduction to Git and GitHub: This section of the exam measures skills of Junior Developers and Platform Support Specialists and covers the basic understanding of Git and GitHub. It explains what Git is and why it is used, the fundamental Git workflow, and concepts related to repositories including their local and remote distinctions. Candidates learn essential Git commands such as initializing and cloning repositories, adding and committing changes, pushing and pulling updates, and branching and merging. It also covers navigating GitHub by creating accounts, managing repositories, understanding its interface, and working with issues and pull requests.

Microsoft GitHub Foundations Sample Questions (Q20-Q25):

NEW QUESTION # 20

Which of the following best describes GitHub flow?

- A. A strict workflow that enforces a linear development process with all changes made directly on the main branch
- B. A branching model that uses feature branches and multiple primary branches
- C. A lightweight workflow that allows for safe experimentation with new ideas and collaboration on projects through branching, pull requests, and merging
- D. A strategy where separate branches are created for each release, and pull requests are used to collaborate on and approve releases

Answer: C

Explanation:

GitHub Flow is a simple, yet powerful, branching strategy that is widely used in modern software development. It emphasizes collaboration and flexibility.

GitHub Flow:

Option C is correct because GitHub Flow is a lightweight workflow designed for safe experimentation and collaboration. It involves creating branches for new features or fixes, opening pull requests for review, and merging changes back into the main branch after approval.

Incorrect Options:

Option A is incorrect because GitHub Flow uses a single main branch, not multiple primary branches.

Option B is incorrect because GitHub Flow is not specifically designed around releases; it is more focused on continuous development and integration.

Option D is incorrect because GitHub Flow is not strict or linear; it encourages branching and pull requests rather than direct changes on the main branch.

GitHub Docs: Understanding the GitHub Flow

NEW QUESTION # 21

Where can you go to discover, browse, and install tools?

- A. GitHub Apps
- B. Organization settings
- C. **GitHub Marketplace**
- D. Explore

Answer: C

Explanation:

The GitHub Marketplace is the place where users can discover, browse, and install various tools and integrations that extend the functionality of GitHub. These tools can include CI/CD services, security checks, and other development utilities that enhance workflow automation and project management.

NEW QUESTION # 22

What are advantages of GitHub Projects over GitHub Projects Classic?

(Each answer presents a complete solution. Choose two.)

- A. GitHub Projects can be connected to third-party tools.
- B. GitHub Projects are Copilot enabled.
- C. **GitHub Projects has multiple layout views.**
- D. **GitHub Projects has Insights.**

Answer: C,D

Explanation:

GitHub Projects is a newer, more powerful version of project management within GitHub, offering enhanced features over the classic version.

Multiple Layout Views:

Option A is correct because GitHub Projects supports multiple views, such as board, table, and timeline views, allowing users to visualize their work in different ways according to their needs.

Insights:

Option B is correct because GitHub Projects provides insights and analytics, enabling teams to track progress and make data-driven decisions.

Incorrect Options:

Option C is incorrect because while GitHub Copilot is a tool for code suggestions, it is not directly integrated with GitHub Projects as a feature.

Option D is incorrect because both GitHub Projects and GitHub Projects Classic can be connected to third-party tools, so it is not an exclusive advantage of the newer GitHub Projects.

GitHub Docs: Managing Projects

NEW QUESTION # 23

Which of the following are included as pre-defined repository roles?

(Each answer presents a complete solution. Choose three.)

- A. Security
- B. Delete
- C. View
- D. **Maintain**
- E. **Triage**
- F. **Write**

Answer: D,E,F

Explanation:

GitHub provides several pre-defined repository roles that determine the level of access and permissions a user has within a repository. The roles that are included by default are:

Triage: Allows users to manage issues and pull requests without write access to the code.

Maintain: Provides more extensive access, including managing settings, but without full administrative control.

Write: Grants permission to push changes and manage issues and pull requests.

Roles like "Security" and "Delete" are not standard pre-defined roles, and "View" is generally referred to as "Read" in GitHub's permission structure.

NEW QUESTION # 24

What is a gist?

- A. Markdown document
- B. GitHub app
- **C. Git repository**
- D. GitHub Pages site

Answer: C

Explanation:

A gist on GitHub is essentially a Git repository, albeit a simplified one, designed for sharing snippets of code, notes, or other text content. Gists support version control and can be public or secret.

Gist as a Git Repository:

Option B is correct because each gist is a Git repository, meaning you can clone it, commit changes, and even fork it, just like any other Git repository.

Incorrect Options:

Option A is incorrect because a gist is not an app; it's a feature of GitHub that provides a simplified repository.

Option C is incorrect because while a gist may contain Markdown documents, it is fundamentally a repository that can hold various file types.

Option D is incorrect because GitHub Pages is a separate service for hosting websites, not related to gists.
