Pass Guaranteed Quiz Efficient Lpi - Exam 010-160 Testking

Do you want to get a better job or a higher income? If the answer is yes, then you should buy our 010-160 exam questions for our 010-160 study materials can help you get what you want. Go against the water and retreat if you fail to enter. The pressure of competition is so great now. If you are not working hard, you will lose a lot of opportunities! There is no time, quickly purchase

Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q34-Q39):

NEW QUESTION # 34
What command displays manual pages? (Specify ONLY the command without any path or parameters.)

Answer:

Explanation:
man
Explanation:
The command that displays manual pages for Linux commands is the man command. The man command is used to display the manual pages for a given command or topic. For example, to view the manual page for the ls command, you can type:
man ls
This will open the manual page for the ls command in a pager, which allows you to scroll and search through the text. You can also specify the section number of the manual page if there are multiple pages with the same name. For example, to view the manual page for the passwd command in section 1, you can type:
man 1 passwd
The man command is one of the most useful and important commands for learning and using Linux. It provides detailed information about the syntax, options, arguments, examples, and other aspects of a command or topic. You can also use the --help option to get a brief summary of the usage and options of a command. For example, to get a quick help for the man command, you can type:
man --help
To learn more about the man command and how to use it effectively, you can refer to the following resources:
Linux Essentials Exam Objectives, Version 1.6, Topic 103.1, Weight 2
Linux Essentials Certification Guide, Chapter 3, Page 51-52
How to Access Manual Pages for Linux Commands - Linux Tutorials - Learn Linux Configuration How to Easily Read a Linux Man Page - Make Tech Easier

NEW QUESTION # 35
Which permissions are set on a regular file once the permissions have been modified with the command chmod 654 file.txt?

- A. drw-r-xr--
- B. d-wxr-x--
- C. -rwxrw---x
- D. -wxr-x--x
- E. -rw-r-xr--

Answer: E

Explanation:
Explanation
The chmod command is used to change the permissions of files and directories. The permissions are represented by three sets of three characters, indicating the permissions for the owner, the group, and the others. Each character can be either r (read), w (write), x (execute), or - (no permission). The chmod command can use either symbolic or numeric mode to specify the permissions. In this question, the numeric mode is used, which consists of three digits from 0 to 7. Each digit is the sum of the permissions for each set, where r is 4, w is 2, and x is 1. For example, 7 means rwx, 6 means rw-, and 4 means r-. Therefore, the command chmod 654 file.txt sets the permissions as follows:
* The first digit 6 means rw- for the owner, which means the owner can read and write the file, but not execute it.
* The second digit 5 means r-x for the group, which means the group can read and execute the file, but not write it.
* The third digit 4 means r-- for the others, which means the others can only read the file, but not write or execute it.
The resulting permissions are -rw-r-xr-, which is the correct answer. The other options are incorrect because they either have the wrong permissions or the wrong file type. A regular file does not have the d (directory) prefix, and a directory cannot have the - (no file type) prefix. References:

NEW QUESTION # 36

Which of the following outputs comes from the command free?

A.
```
A. 21:04:15 up 14 days, 7:43, 3 users, load average: 0.89, 1.00, 0.99
```

B.
```
avg-cpu:  %user    %nice    %system  %iowait  %steal  %idle

          34.04    0.03     13.88    1.06     0.00    50.99
```

C.
```
Filesystem           Size    Used    Avail   Use%   Mounted
                                                    on

/dev/mapper/vg_ssd-  25G     20G     3.6G    85%    /
root
```

D.
```
1.8M    /tmp
```

E.
```
       total      used       free      shared   buff/cache  available

Mem:  16123128  12565680  2011624   412128   1545824     7180416
```

- A. Option E
- B. Option B
- C. Option C
- D. Option A
- E. Option D

Answer: A

NEW QUESTION # 37

What is the return value of a shell script after successful execution?

- A. 0
- B. 1
- C. 2
- D. 3
- E. 4

Answer: B

NEW QUESTION # 38

The ownership of the file doku.odt should be changed. The new owner is named tux. Which command accomplishes this change?

- A. chown tux doku.odt
- B. newuser doku.odt tux
- C. transfer tux: doku.odt
- D. chmod u=tux doku.odt
- E. passwd doku.odt:tux

Answer: A

Explanation:
Explanation
The correct command to change the ownership of the file doku.odt to a new owner named tux is chown tux doku.odt. This command uses the chown command, which stands for change owner, followed by the name of the new owner and the name of the file as arguments. The chown command allows you to change the user and/or group ownership of a given file, directory, or symbolic link12. The other options are incorrect because they use different commands or syntax that do not change the ownership of the file. For example:
* Option A uses the chmod command, which stands for change mode, and is used to change the permissions of files and directories,

not the ownership3.

* Option B uses the newuser command, which is used to create a new user account, not to change the ownership of a file4.
* Option D uses the transfer command, which is not a valid Linux command.
* Option E uses the passwd command, which is used to change the password of a user account, not the ownership of a file5.
