As candidates who will attend the exam, some may be anxious about the coming exam, maybe both in the AZ-140 practice material and the mental state. We will provide you the AZ-140 practice material with high quality as well as the comfort in your mental. The AZ-140 Exam Dumps have the knowledge for the exam, and the stimulated AZ-140 soft test engine will be of great benefit to you through making you know the exam procedures.

To pass the AZ-140 Exam, candidates must have a strong understanding of Azure Virtual Desktop, as well as practical experience in operating and configuring it. AZ-140 exam is designed to test the candidate's knowledge and skills in managing the infrastructure, deploying and managing virtual machines, and monitoring and optimizing the performance of Azure Virtual Desktop solutions.

Reliable AZ-140 Braindumps | 100% AZ-140 Accuracy

The Microsoft AZ-140 certification exam is one of the top-rated and valuable credentials in the Microsoft world. This Microsoft AZ-140 certification exam is designed to validate a candidate's skills and knowledge. With Microsoft AZ-140 Certification Exam everyone can upgrade their expertise and knowledge level.

Microsoft Configuring and Operating Microsoft Azure Virtual Desktop Sample Questions (Q244-Q249):

NEW QUESTION # 244
-
You have an Azure Virtual Desktop host pool that contains 10 session hosts.
You plan to configure each session host to use an FSLogix profile container that will exclude specific folders in the user profile.
You need to perform the following configurations:
* Create a configuration file to list the excluded profile folders.
* Identify which registry setting will distribute the file to each session host automatically.
What should you name the configuration file, and which registry setting should you identify? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

File name:

- Exclude.xml
- Redirect.xml
- Redirections.xml

Registry setting:

- KeepLocalDir
- NoProfileContainingFolder
- RedirXMLSourceFolder

Answer:

Explanation:

Answer Area

File name:

- Exclude.xml
- Redirect.xml
- *Redirections.xml*

Registry setting:

- KeepLocalDir
- NoProfileContainingFolder
- *RedirXMLSourceFolder*

Explanation
Graphical user interface, text, application Description automatically generated

Answer Area

File name:

▼

Exclude.xml
Redirect.xml
Redirections.xml

Registry setting:

▼

KeepLocalDir
NoProfileContainingFolder
RedirXMLSourceFolder
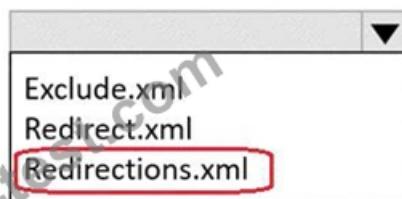

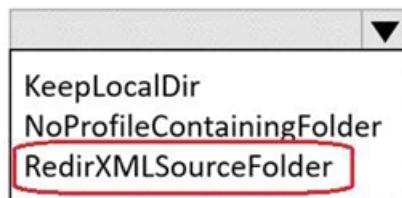

NEW QUESTION # 245

You have an Azure Virtual Desktop deployment.

You have a RemoteApp named App1.

You discover that from the Save As dialog box of App1, users can run executable applications other than App1 on the session hosts.

You need to ensure that the users can run only published applications on the session hosts.

What should you do?

- A. Modify the RDP Properties of the host pool.
- B. Modify the Access control (1AM) settings of the host pool.
- C. Configure an AppLocker policy on the session hosts.
- D. Configure a conditional access policy in Azure Active Directory (Azure AD).

Answer: C

Explanation:

NEW QUESTION # 246

Case Study 2 - Litware, Inc

Overview

Litware, Inc. is a pharmaceutical company that has a main office in Boston, United States, and a remote office in Chennai, India.

Existing Environment. Identity Environment

The network contains an on-premises Active Directory domain named litware.com that syncs to an Azure Active Directory (Azure AD) tenant named litware.com.

The Azure AD tenant contains the users shown in the following table.

Name	Description
Admin1	A directory-synced user that is a local administrator on all the computers joined to the on-premises Active Directory domain.
Admin2	A cloud-only user that is unassigned to roles.
CloudAdmin1	A cloud-only user that is assigned the Global administrator role.

All users are registered for Azure Multi-Factor Authentication (MFA).

Existing Environment. Cloud Services

Litware has a Microsoft 365 E5 subscription associated to the Azure AD tenant. All users are assigned Microsoft 365 Enterprise E5 licenses.

Litware has an Azure subscription associated to the Azure AD tenant. The subscription contains the resources shown in the following table.

Name	Type	Location	Configuration
storage1	Storage account	East US	Storage (general purpose v1), Locally-redundant storage (LRS).
VM1	Virtual machine	East US	Joined to the on-premises Active Directory domain.

Litware uses custom virtual machine images and custom scripts to automatically provision Azure virtual machines and join the virtual machines to the on-premises Active Directory domain.

Network and DNS

The offices connect to each other by using a WAN link. Each office connects directly to the internet.

All DNS queries for internet hosts are resolved by using DNS servers in the Boston office, which point to root servers on the internet. The Chennai office has caching-only DNS servers that forward queries to the DNS servers in the Boston office.

Requirements. Planned Changes

Litware plans to implement the following changes:

* Deploy Azure Virtual Desktop environments to the East US Azure region for the users in the Boston office and to the South India Azure region for the users in the Chennai office.

* Implement FSLogix profile containers.

* Optimize the custom virtual machine images for the Azure Virtual Desktop session hosts.

* Use PowerShell to automate the addition of virtual machines to the Azure Virtual Desktop host pools.

Requirements. Performance Requirements

Litware identifies the following performance requirements:

* Minimize network latency of the Azure Virtual Desktop connections from the Boston and Chennai offices.

* Minimize latency of the Azure Virtual Desktop host authentication in each Azure region.

* Minimize how long it takes to sign in to the Azure Virtual Desktop session hosts.

Requirements. Authentication Requirements

Litware identifies the following authentication requirements:

* Enforce Azure MFA when accessing Azure Virtual Desktop apps.

* Force users to reauthenticate if their Azure Virtual Desktop session lasts more than eight hours.

Requirements. Security Requirements

Litware identifies the following security requirements:

* Explicitly allow traffic between the Azure Virtual Desktop session hosts and Microsoft 365.

* Explicitly allow traffic between the Azure Virtual Desktop session hosts and the Azure Virtual Desktop infrastructure.

* Use built-in groups for delegation.

* Delegate the management of app groups to Admin2, including the ability to publish app groups to users and user groups.

* Grant Admin1 permissions to manage workspaces, including listing which apps are assigned to the app groups.

* Minimize administrative effort to manage network security.

* Use the principle of least privilege.

Requirements. Deployment Requirements

Litware identifies the following deployment requirements:

* Use PowerShell to generate the token used to add the virtual machines as session hosts to a Azure Virtual Desktop host pool.

* Minimize how long it takes to provision the Azure Virtual Desktop session hosts based on the custom virtual machine images.

* Whenever possible, preinstall agents and apps in the custom virtual machine images.

User Profile Requirements

Litware identifies the following user profile requirements:

* In storage1, store user profiles for the Boston office users.

* Ensure that the user profiles for the Boston office users replicate synchronously between two Azure regions.

* Ensure that Admin1 uses a local profile only when signing in to the Azure Virtual Desktop session hosts.

You need to implement network security to meet the security requirements and the performance requirements.

Which two actions should you perform? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Filter traffic by using infrastructure rules.
- B. Filter traffic by using inbound rules.
- C. Filter traffic by using outbound rules.
- D. Deploy two Azure Firewall instances and Azure Firewall Manager.
- E. Deploy a network security group (NSG) and two application security groups.
- F. Deploy an Azure Firewall instance and Azure Firewall Manager.

Answer: D,E

Explanation:

According to the question "Each correct answer presents a complete solution." A is a complete solution. You should have one firewall per region.

E is the only other complete solution. NSGs give you essentially the same control over inbound/outbound connections to/from Azure resources.

NEW QUESTION # 247
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have a Windows Virtual Desktop host pool that contains five session hosts. The session hosts run Windows 10 Enterprise multi-session.
You need to prevent users from accessing the internet from Windows Virtual Desktop sessions. The session hosts must be allowed to access all the required Microsoft services.
Solution: You modify the IP configuration of each session host.
Does that meet the goal?

- A. No
- B. Yes

Answer: A

Explanation:
Topic 1, Litware, Inc
Case study
This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.
To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.
At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.
To start the case study
To display the first question in this case study, click the button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the button to return to the question.
Overview
Litware, Inc. is a pharmaceutical company that has a main office in Boston, United States, and a remote office in Chennai, India.
Existing Environment. Identity Environment
The network contains an on-premises Active Directory domain named litware.com that syncs to an Azure Active Directory (Azure AD) tenant named litware.com.
The Azure AD tenant contains the users shown in the following table.

* Minimize how long it takes to provision the Windows Virtual Desktop session hosts based on the custom virtual machine images.
* Whenever possible, preinstall agents and apps in the custom virtual machine images.

NEW QUESTION # 248

Which two roles should you assign to Admin2 to meet the security requirements? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.

- A. Desktop Virtualization Workspace Contributor
- B. Desktop Virtualization Application Group Contributor
- C. Desktop Virtualization Application Group Reader
- D. User Access Administrator
- E. Desktop Virtualization Host Pool Contributor

Answer: B,C
