

ITIL-4-Practitioner-Release-Management Testantworten & ITIL-4-Practitioner-Release-Management Prüfungsinformationen

P.S. Kostenlose und neue ITIL-4-Practitioner-Release-Management Prüfungsfragen sind auf Google Drive freigegeben von DeutschPrüfung verfügbar: https://drive.google.com/open?id=1v3dc8i6jJ_SKWTL00c_yG7WZtUbDK2_I

Sie haben schon die Prüfungsmaterialien zur Peoplecert ITIL-4-Practitioner-Release-Management Zertifizierung von DeutschPrüfung gesehen. Es ist doch Zeit, eine Wahl zu treffen. Sie können auch andere Produkte wählen, aber unser DeutschPrüfung wird Ihnen die größten Interessen bringen. Mit DeutschPrüfung werden Sie eine glänzende Zukunft haben, eine bessere Berufsaussichten in der IT-Branche haben und effizient arbeiten.

Peoplecert ITIL-4-Practitioner-Release-Management Prüfungsplan:

Thema	Einzelheiten
Thema 1	Change: This section of the exam measures the skills of DevOps Engineers and focuses on how to manage and control changes within IT environments. It includes planning, executing, monitoring, and communicating changes to ensure minimal disruption while keeping stakeholders informed about the progress and impact of changes.
Thema 2	AI and Automation: This section of the exam measures the skills of IT Operations Managers and addresses the use of AI and automation in delivering IT systems and applications that align with user needs. It ensures that software releases meet quality standards, are delivered on time, and stay within budget, using modern tools and intelligent technologies.
Thema 3	Service Design: This section of the exam measures the skills of IT Release Managers and covers the principles and practices involved in designing services and products that are practical, useful, and aligned with stakeholder expectations. It focuses on ensuring that services are designed in a way that they can be effectively delivered and supported by the organization and its partners.

Peoplecert ITIL-4-Practitioner-Release-Management: ITIL 4 Practitioner: Release Management Exam braindumps PDF & Testking echter Test

Die Forschungsmaterialien haben gezeigt, dass es schwierig ist, die Peoplecert ITIL-4-Practitioner-Release-Management Zertifizierungsprüfung zu bestehen. Unser DeutschPrüfung hat erfahrungsreiche IT-Experten, die durch harte Arbeit die neuesten Schulungsunterlagen zur Peoplecert ITIL-4-Practitioner-Release-Management Zertifizierungsprüfung bearbeitet haben. Unser DeutschPrüfung hat die besten Ressourcen, die Ihnen beim Bestehen der Peoplecert ITIL-4-Practitioner-Release-Management

Prüfung helfen. Sie enthalten sowohl Fragen, als auch Antworten. Sie brauchen sich nicht so viel Mühe dafür auszugeben und können trotzdem eine hohe Note in der Prüfung bekommen. Wählen Sie doch die Schulungsunterlagen zur Peoplecert ITIL-4-Practitioner-Release-Management Zertifizierungsprüfung, die Ihnen sehr helfen können.

Peoplecert ITIL 4 Practitioner: Release Management Exam ITIL-4-Practitioner-Release-Management Prüfungsfragen mit Lösungen (Q17-Q22):

17. Frage

A service owner is initiating the release planning and coordination process for a complex project. What is an example of the FIRST activity that the service owner should undertake in this instance?

- A. Check that an automated notification has been sent to stakeholders
- **B. Select a release model that fits with the types of changes to be included in the release**
- C. Ensure that the release procedures are appropriate for the particular release under consideration
- D. Test the service components and take remedial action as necessary

Antwort: B

Begründung:

The release planning and coordination process begins with defining the approach for the release. The ITIL 4 Practitioner: Release Management document states: "The first step in release planning and coordination is to select an appropriate release model that fits the types of changes to be included in the release. This ensures that the release approach aligns with the nature and complexity of the changes" (Section 3.2.1).

* Option A (Test the service components) is part of the release execution or testing phase, not the first step in planning.

* Option B (Ensure that the release procedures are appropriate) is a subsequent step after selecting the model, to confirm procedural alignment.

* Option C (Select a release model) is the first activity, as it sets the foundation for how the release will be structured and managed, especially for a complex project.

* Option D (Check that an automated notification has been sent) occurs later, during the communication phase of the release process.

The correct answer is C, as selecting the release model is the initial step in release planning.

18. Frage

What is MOST LIKELY to affect how significantly an organization's release management activities are dependent on partners and suppliers?

- A. The knowledge level of the organization's users
- **B. The source of the organization's products and technology solutions**
- C. The amount of automation in the release management practice
- D. The maturity of the release management practice

Antwort: B

Begründung:

The dependency on partners and suppliers in release management is influenced by the extent to which an organization relies on external products or services. The ITIL 4 Practitioner: Release Management document explains: "The source of the organization's products and technology solutions significantly affects the dependency on partners and suppliers, as reliance on external software, hardware, or services increases the need for coordination during releases" (Section 3.4).

* Option A (The knowledge level of users) impacts user adoption but not the dependency on suppliers for release activities.

* Option B (The maturity of the practice) affects internal efficiency, not the structural dependency on external parties.

* Option C (The amount of automation) influences how releases are executed but doesn't determine the dependency on suppliers.

* Option D (The source of products and technology solutions) directly determines how much the organization relies on external parties, affecting release management dependency.

The correct answer is D, as the source of technology solutions most significantly impacts supplier dependency.

19. Frage

A retail organization is hiring a new release manager. The vacancy description indicates that successful candidates should have good knowledge of technologies and platforms used by the organization, good knowledge of ITIL and DevOps, and experience in retail.

What other skill is important to the release management role?

- A. Understanding of the organization's business
- **B. Project planning and coordination**
- C. Knowledge of service management frameworks
- D. Technical expertise

Antwort: B

Begründung:

The release management role in ITIL 4 requires a range of competencies to ensure effective coordination and execution of releases. The ITIL 4 Practitioner: Release Management document states: "A release manager must have strong project planning and coordination skills to manage the scheduling, communication, and execution of releases, ensuring alignment with organizational goals and minimal disruption" (Section 3.3).

* Option A (Knowledge of service management frameworks) is already covered by the requirement of ITIL knowledge in the vacancy description, so it's not an additional skill.

* Option B (Project planning and coordination) is a critical skill for release managers, as they need to orchestrate complex release activities, manage timelines, and coordinate with stakeholders, which isn't explicitly covered by the listed requirements.

* Option C (Technical expertise) is implied by the requirement for knowledge of technologies and platforms, so it's not an additional skill.

* Option D (Understanding of the organization's business) is important but less specific to release management compared to project planning, and the retail experience requirement already covers business context.

The correct answer is B, as project planning and coordination is a key additional skill for effective release management.

20. Frage

A release manager has decided on a policy of not allowing users to choose to accept software updates. What is this an example of?

- **A. A 'push' approach**
- B. Continuous integration
- C. A 'pull' approach
- D. Continuous delivery

Antwort: A

Begründung:

The ITIL 4 Practitioner: Release Management document explains the difference between push and pull approaches in release management: "In a push approach, updates are deployed to users without giving them a choice, often to ensure compliance or security. In a pull approach, users can choose when to adopt updates" (Section 3.2.3).

* Option A (A 'pull' approach) is incorrect because a pull approach allows users to choose when to accept updates, which contradicts the scenario.

* Option B (A 'push' approach) is correct, as the policy of not allowing users to choose means the updates are automatically deployed to them, fitting the definition of a push approach.

* Option C (Continuous delivery) and Option D (Continuous integration) are development practices, not release deployment strategies. Continuous delivery involves making releases available frequently, but it doesn't specify whether users must accept them (push) or can choose (pull).

The scenario describes a push approach, making B the correct answer.

21. Frage

What is a description of a release?

- **A. A set of new service features that will benefit users**
- B. The guidelines for collating two or more changes
- C. All updated service versions that are mandatory for users
- D. The repeated building and testing of code leading to deployment

Antwort: A

Begründung:

In ITIL 4, a release is defined as the output of the release management practice that is made available to users.

The ITIL 4 Practitioner: Release Management document states: "A release is a version of a service or a set of service components that is made available for use. It often includes new or changed features that deliver value to users" (Section 2.2).

* Option A (A set of new service features that will benefit users) aligns with the definition, as a release typically includes new or changed features intended to provide value to users.

* Option B (The repeated building and testing of code) describes a development process (e.g., continuous integration), not the release itself.

* Option C (All updated service versions that are mandatory for users) is incorrect because releases are not always mandatory; ITIL 4 allows for push or pull approaches.

* Option D (Guidelines for collating changes) describes a process or policy, not the release itself.

The correct description of a release is a set of features or components made available for use, making A the correct answer.

22. Frage

.....

Seit Jahren gilt DeutschPrüfung als der beste Partner für die IT-Prüfungsteilnehmer. Sie bietet reichliche Ressourcen der Prüfungsunterlagen. Die Bestehensquote der Kunden, die Peoplecert ITIL-4-Practitioner-Release-Management Prüfungssoftware benutzt haben, erreicht eine Höhe von fast 100%. Diese befriedigte Feedbacks geben wir mehr Motivation, die zuverlässige Qualität von Peoplecert ITIL-4-Practitioner-Release-Management weiter zu versichern. Wir wünschen Ihnen, durch das Bestehen der Peoplecert ITIL-4-Practitioner-Release-Management das Gefühl des Erfolgs empfinden, weil es uns auch das Gefühl des Erfolges mitbringt.
