Free OGEA-101 Exam Questions - Latest OGEA-101 Exam Notes

BONUS!!! Download part of TestsDumps OGEA-101 dumps for free: https://drive.google.com/open?id=1upWqQfF0J58185khbZ5eZgyn1cz8g8ds

The The Open Group OGEA-101 exam questions are the ideal and recommended study material for quick and easiest TOGAF Enterprise Architecture Part 1 Exam (OGEA-101) exam dumps preparation. The TOGAF Enterprise Architecture Part 1 Exam (OGEA-101) practice questions are designed and verified by qualified and renowned The Open Group Certification Exams trainers. They work closely and check all OGEA-101 Exam Dumps step by step. They also ensure the best possible answer for all OGEA-101 exam questions and strive hard to maintain the top standard of TOGAF Enterprise Architecture Part 1 Exam (OGEA-101) exam dumps all the time.

As you know, getting a OGEA-101 certificate is helpful to your career development. At the same time, investing money on improving yourself is sensible. You need to be responsible for your life. Stop wasting your time on meaningless things. We sincerely hope that you can choose our OGEA-101 Study Guide, which may change your life and career by just a step with according OGEA-101 certification. For we have helped so many customers achieve their dreams.

The Open Group OGEA-101 PDF Questions – Best Exam Preparation Strategy

Choosing The Open Group OGEA-101 study material means you choose an effective, smart, and fast way to succeed in your OGEA-101 exam certification. You will find explanations along with the answers where is necessary in the OGEA-101 actual test

files. With the study by the OGEA-101 vce torrent, you will have a clear understanding of the OGEA-101 Valid Dumps. In addition, you can print the OGEA-101 pdf dumps into papers, thus you can do marks on the papers. Every time, when you review the papers, you will enhance your memory about the marked points. Be confident to attend your OGEA-101 exam test, you will pass successfully.

The Open Group TOGAF Enterprise Architecture Part 1 Exam Sample Questions (Q94-Q99):

NEW QUESTION # 94

Which of the following describes the practice by which the enterprise architecture is managed and controlled at an enterprise-wide level?

- A. Architecture governance
- B. IT governance
- C. Technology governance
- D. Corporate governance

Answer: A

Explanation:
According to the TOGAF Standard, 10th Edition, architecture governance is "the practice by which enterprise architectures and other architectures are managed and controlled at an enterprise-wide level" 1. Architecture governance ensures that the architecture development and implementation are aligned with the strategic objectives, principles, standards, and requirements of the enterprise, and that they deliver the expected value and outcomes. Architecture governance also involves establishing and maintaining the architecture framework, repository, board, contracts, and compliance reviews 1. The other options are not correct, as they are not the term used by the TOGAF Standard to describe the practice by which the enterprise architecture is managed and controlled at an enterprise-wide level. Corporate governance is "the system by which an organization is directed and controlled" 2, and it covers aspects such as leadership, strategy, performance, accountability, and ethics. IT governance is "the system by which the current and future use of IT is directed and controlled" 2, and it covers aspects such as IT strategy, policies, standards, and services. Technology governance is "the system by which the technology decisions and investments are directed and controlled" 3, and it covers aspects such as technology selection, acquisition, deployment, and maintenance. Reference: 1: TOGAF Standard, 10th Edition, Part VI: Architecture Governance, Chapter 44: Introduction. 2: TOGAF Standard, 10th Edition, Part I: Introduction, Chapter 3: Definitions. 3: TOGAF Series Guide: Using the TOGAF Framework to Define and Govern Service-Oriented Architectures, Part II: Using the TOGAF Framework to Define and Govern Service-Oriented Architectures, Chapter 5: Technology Governance.

NEW QUESTION # 95

Which of the following is a responsibility of an Architecture Board?

- A. Conducting assessments of the maturity level of architecture discipline within the organization
- B. Creating the Statement of Architecture Work
- C. Allocating resources for architecture projects
- D. Establishing targets for re-use of components

Answer: D

Explanation:
* An Architecture Board is an executive-level group responsible for the review and maintenance of the strategic architecture and all of its sub-architectures1. It is a key element in a successful Architecture Governance strategy2.
* An Architecture Board is typically made responsible, and accountable, for achieving some or all of the following goals2: oProviding the basis for all decision-making with regard to the architectures oConsistency between sub-architectures oEstablishing targets for re-use of components oFlexibility of the Enterprise Architecture: To meet changing business needs To leverage new technologies oEnforcement of Architecture Compliance oImproving the maturity level of architecture discipline within the organization oEnsuring that the discipline of architecture-based development is adopted oSupporting a visible escalation capability for out-of-bounds decisions
* Therefore, the correct answer is option D, which captures one of the goals of an Architecture Board as stated in the TOGAF Standard, Version 9.22.
* Option A is incorrect, because conducting assessments of the maturity level of architecture discipline within the organization is not a direct responsibility of an Architecture Board, but rather a part of the Architecture Capability Framework3.
* Option B is incorrect, because allocating resources for architecture projects is not a direct responsibility of an Architecture Board, but rather a part of the Architecture Governance Framework4.

* Option C is incorrect, because creating the Statement of Architecture Work is not a direct responsibility of an Architecture Board, but rather a part of the Architecture Development Method5. Reference:
* 1: Architecture Board - The Open Group3
* 2: TOGAF Standard, Version 9.2 - Part VI: Architecture Governance Framework - Architecture Board
* 3: TOGAF Standard, Version 9.2 - Part VI: Architecture Governance Framework - Architecture Capability Framework
* 4: TOGAF Standard, Version 9.2 - Part VI: Architecture Governance Framework - Architecture Governance Framework
* 5: TOGAF Standard, Version 9.2 - Part II: Architecture Development Method - Phase A: Architecture Vision

NEW QUESTION # 96
Consider the following statement:
According to the TOGAF Standard a governed approach of a particular deliverable will ensure a system of continuous monitoring to check integrity changes decision-making and audit of all architecture-related activities Which deliverable is being referred to?

- A. An Architecture Contract
- B. The Architecture Definition Document
- C. The Architecture Vision
- D. The Statement of Architecture Work

Answer: A

NEW QUESTION # 97
Consider the following ADM phases objectives.

	Objective
1	Develop the Target Data Architecture that enables the Business Architecture and the Architecture Vision
2	Develop the Target Business Architecture that describes how the enterprise needs to operate to achieve the business goals
3	Develop a high-level aspirational vision of the capabilities and business value to be delivered as a result of the proposed Enterprise Architecture
4	Develop the Target Application Architecture that enables the Business Architecture and the Architecture Vision, in a way that addresses the Statement of Architecture Work and stakeholder concerns

Which phase does each objective match?

- A. 1B-2D-3A-4C
- B. 1C-2D-3B-4A
- C. 1A-2B-3C-4D
- D. 1C-2B-3A-4C

Answer: D

Explanation:
* The objectives listed in the question correspond to the objectives of different phases of the TOGAF ADM (Architecture
Development Method), which is a method for developing and managing an enterprise architecture1.
* The ADM consists of nine phases, each with a specific purpose and output. The phases are1:
* Preliminary Phase: To prepare and initiate the architecture development cycle, including defining the architecture framework, principles, and governance.
* Phase A: Architecture Vision: To define the scope, vision, and stakeholders of the architecture initiative, and to obtain approval to proceed.
* Phase B: Business Architecture: To describe the baseline and target business architecture, and to identify the gaps between them.
* Phase C: Information Systems Architectures: To describe the baseline and target data and application architectures, and to identify the gaps between them.
* Phase D: Technology Architecture: To describe the baseline and target technology architecture, and to identify the gaps between them.
* Phase E: Opportunities and Solutions: To identify and evaluate the opportunities and solutions for implementing the target architecture, and to define the work packages and transition architectures.
* Phase F: Migration Planning: To finalize the implementation and migration plan, and to ensure alignment with the enterprise

portfolio and project management.
* Phase G: Implementation Governance: To provide architecture oversight and guidance for the implementation projects, and to manage any architecture change requests.
* Phase H: Architecture Change Management: To monitor the changes in the business and technology environment, and to assess the impact and performance of the architecture.
* Based on the above definitions, we can match each objective with the corresponding phase as follows:
* Objective 1: Develop the Target Data Architecture that enables the Business Architecture and the Architecture Vision. This objective is achieved in Phase C: Information Systems Architectures, where the data architecture is defined as a subset of the information systems architecture2.
* Objective 2: Develop the Target Business Architecture that describes how the enterprise needs to operate to achieve the business goals. This objective is achieved in Phase B: Business Architecture, where the business architecture is defined as a subset of the enterprise architecture3.
* Objective 3: Develop a high-level aspirational vision of the capabilities and business value to be delivered as a result of the proposed Enterprise Architecture. This objective is achieved in Phase A: Architecture Vision, where the architecture vision is defined as a high-level description of the target architecture and its benefits4.
* Objective 4: Develop the Target Application Architecture that enables the Business Architecture and the Architecture Vision, in a way that addresses the Statement of Architecture Work and stakeholder concerns. This objective is achieved in Phase C: Information Systems Architectures, where the application architecture is defined as a subset of the information systems architecture2.

NEW QUESTION # 98

Which of the following best describes the purpose of the Architecture Requirements Specification?

- A. It defines the scope and approach to complete an architecture project
- B. It contains an assessment of the current architecture requirements
- C. It provides a set of statements that outline what a project must do to comply with the architecture
- D. It is sent from the sponsor and triggers the start of an architecture development cycle

Answer: C

Explanation:
The Architecture Requirements Specification is one of the TOGAF deliverables that provides a set of quantitative statements that outline what an implementation project must do in order to comply with the architecture12. It is a companion to the Architecture Definition Document, which provides a qualitative view of the solution and aims to communicate the intent of the architect. The Architecture Requirements Specification provides a quantitative view of the solution, stating measurable criteria that must be met during the implementation of the architecture3. It typically forms a major component of an implementation contract or contract for more detailed Architecture Definition4. References:
*Deliverable: Architecture Requirements Specification - The Open Group
*Architecture Requirements Specification - Visual Paradigm Community Circle
*The TOGAF Standard, Version 9.2 - Definitions - The Open Group
*The TOGAF Standard, Version 9.2 - Architecture Requirements Specification - The Open Group
