

Reliable 800-150 Test Cost | Simulations 800-150 Pdf

BONUS!!! Download part of ValidDumps 800-150 dumps for free: <https://drive.google.com/open?id=13tmeb7MnHGbfwwtxBoBvT2weT410q9et>

ValidDumps 800-150 desktop and web-based practice exams are distinguished by their excellent features. The 800-150 web-based practice exam is supported by all operating systems and can be taken through popular browsers including Chrome, MS Edge, Internet Explorer, Opera, Firefox, and Safari. Windows computers can run the desktop Cisco 800-150 Practice Test software. You won't require a live internet connection to use the desktop Cisco exam simulation software once you've verified the product's license.

There are rare products which can rival with our products and enjoy the high recognition and trust by the clients like our products. Our products provide the 800-150 test guide to clients and help they pass the test 800-150 certification which is highly authorized and valuable. Our company is a famous company which bears the world-wide influences and our 800-150 Test Prep is recognized as the most representative and advanced study materials among the same kinds of products. Whether the qualities and functions or the service of our product, are leading and we boost the most professional expert team domestically.

100% Pass 800-150 - Updated Reliable Supporting Cisco Devices for Field Technicians Test Cost

Now they have become certified Supporting Cisco Devices for Field Technicians Certification Exam experts and pursue a rewarding career in the top world brands. You can also trust top-notch and easy-to-use Cisco 800-150 practice test questions. The Supporting Cisco Devices for Field Technicians (800-150) exam questions are checked and verified by experienced and qualified Supporting Cisco Devices for Field Technicians (800-150) exam trainers. They have years of experience and knowledge to collect, design, and answer the real Supporting Cisco Devices for Field Technicians (800-150) exam questions.

Cisco 800-150 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Cisco Software: This section of the exam measures the skills of a Network Engineer and discusses Cisco's software systems and licensing. It explains the difference between IOS install and bundle modes and gives an overview of different licensing models. Students learn how to manage Cisco software images, including backing up, transferring, and installing images via FTP, TFTP, or USB. It also covers how to handle configuration files to keep devices running properly and ensure smooth upgrades or replacements.

Topic 2	<ul style="list-style-type: none"> • Cisco Infrastructure and Collaboration Infrastructure: This section of the exam measures the skills of a Collaboration Engineer and focuses on Cisco infrastructure devices, endpoints, and collaboration technologies. It introduces network devices, collaboration endpoints like IP phones and video systems, and explains on-premises collaboration deployments using tools like Cisco Unified Communications Manager. It also covers how video systems integrate into collaboration environments and highlights Cisco's cloud services for enterprise communication, including Webex Meetings, Webex Teams, and hosted collaboration solutions.
Topic 3	<ul style="list-style-type: none"> • Cisco Hardware Replacement: This section of the exam measures the skills of a Technical Support Engineer and teaches how to safely and correctly replace Cisco hardware. It explains safety procedures such as creating safe work zones and handling electrostatic discharge. Students learn the step-by-step processes to replace a wide range of Cisco devices, from switches and routers to firewalls, UCS servers, and collaboration endpoints. It also covers configuring Cisco NX-OS software, including understanding operating modes, boot procedures, and password recovery, and introduces Cisco collaboration endpoint solutions like IP phones and video systems.
Topic 4	<ul style="list-style-type: none"> • Networking Foundations: This section of the exam measures the skills of a Network Engineer and covers the basic building blocks of computer networking. It explains different types of networks like local area networks and wireless networks, and introduces lightweight wireless LANs. It describes the layers of communication models like the OSI model and TCP • IP stack, and explains how data moves across networks. It also discusses the physical cabling used in networks, such as Ethernet and fiber optics. Students will learn about network switching, IP addressing, subnetting, and routing at Layer 3. The section also introduces Cisco's campus network devices, data center switches, UCS servers, and collaboration devices, describing their roles and functions in the network.

Cisco Supporting Cisco Devices for Field Technicians Sample Questions (Q81-Q86):

NEW QUESTION # 81

Which two features are managed by the hardware and software of the collaboration infrastructure? (Choose two.)

- A. Hosting large-scale databases
- B. Phone book administration
- C. Facilitating connections
- D. Network bandwidth allocation
- E. Supporting meeting experiences

Answer: C,E

Explanation:

The Cisco Collaboration Infrastructure is designed to support unified communications, video conferencing, and team collaboration through an integrated architecture involving both hardware (e.g., endpoints, media servers) and software (e.g., CUCM, Webex apps).

According to the FLDTEC course content under Cisco Collaboration Equipment and Infrastructure:

Facilitating Connections (C):

Cisco infrastructure components such as CUCM, Expressway, and Cisco Meeting Server enable real-time connections between users across voice, video, and messaging systems.

Supporting Meeting Experiences (E):

Devices such as Webex Boards, Room Kits, and Cisco Quad Cameras, in combination with platforms like Webex, provide immersive and seamless meeting experiences, supported by the infrastructure.

Incorrect Options:

A: Network bandwidth allocation: Typically managed by network QoS policies and WAN optimizations, not the collaboration infrastructure directly.

B: Hosting large-scale databases: Not a function of Cisco's collaboration system - this falls under data center or database server roles.

D: Phone book administration: Often a function within directory services or external LDAP integration, not a core collaboration infrastructure task.

NEW QUESTION # 82

Which deployment model minimizes dependence on internet connectivity for core collaboration functions?

- A. Hosted Collaboration Solution
- B. Cloud-based deployment
- C. On-premises deployment
- D. Software-as-a-Service model

Answer: C

Explanation:

On-premises deployment model minimizes dependence on internet connectivity for core collaboration functions. In this model, all critical services, including call control, messaging, and conferencing, are hosted within the organization's local infrastructure. This ensures that internal communication services remain operational even if internet connectivity is lost.

In contrast, cloud-based deployments (Options A and C) and Hosted Collaboration Solutions (Option D) rely on internet connectivity to access services hosted externally, making them more susceptible to internet outages.

Reference: Supporting Cisco Devices for Field Technicians (FLDTEC) - Cisco Licensing and Smart Licensing

NEW QUESTION # 83

Which command provides a concise look at important switch port characteristics, such as port ID, VLAN, duplex, speed, and media type?

- A. show controllers
- B. show interface status
- C. show ip interface brief
- D. show cdp neighbors

Answer: B

Explanation:

The show interface status command offers a succinct overview of switch port characteristics, including:

- * Port ID
- * VLAN assignment
- * Duplex mode
- * Speed
- * Media type

This command is particularly useful for quickly assessing the operational status and configuration of switch ports, aiding in troubleshooting and verification tasks.

In contrast:

- * show cdp neighbors displays information about directly connected Cisco devices.
- * show controllers provides low-level hardware information.
- * show ip interface brief offers a summary of IP-related interface information.

NEW QUESTION # 84

Which action must be taken before powering down the endpoint during the replacement process of a Cisco collaboration device?

- A. Activate the new device.
- B. Back up the configuration.
- C. Reset the device to factory settings.
- D. Install the new hardware.

Answer: B

Explanation:

Before shutting down any Cisco collaboration device (such as an IP phone, video endpoint, or codec) for replacement, it is essential to back up the configuration. This ensures that all custom settings, including user profiles, network configurations, and service settings, are preserved and can be quickly restored on the replacement device.

This backup minimizes downtime and avoids manual reconfiguration errors during the swap process.

NEW QUESTION # 85

Drag and drop the failures from the left onto the responsible devices in the MDS field-replaceable unit on the right.

inability to manage or control switch functions	fan module
failure to maintain optimal temperatures	supervisor module
loss of connectivity on specific ports	fabric module
inability to establish fiber optic connections	line card
degraded internal data transfer between line cards	transceivers

Answer:

Explanation:

inability to manage or control switch functions	failure to maintain optimal temperatures
failure to maintain optimal temperatures	inability to manage or control switch functions
loss of connectivity on specific ports	degraded internal data transfer between line cards
inability to establish fiber optic connections	loss of connectivity on specific ports
degraded internal data transfer between line cards	inability to establish fiber optic connections

Explanation:

Inability to manage or control switch functions # Supervisor module

Failure to maintain optimal temperatures # Fan module

Loss of connectivity on specific ports # Line card

Inability to establish fiber optic connections # Transceivers

Degraded internal data transfer between line cards # Fabric module

From the FLDTEC training materials, Cisco MDS switches are built for high availability and redundancy, but field technicians must know which component impacts what function:

* Supervisor Module: Manages control plane functions - a failure results in loss of system-level management or redundancy.

* Fan Module: Essential for cooling - failure here leads to overheating and thermal alarms.

* Line Card: Provides connectivity - port failures or loss of interface status originate from faulty line cards.

* Transceivers (SFP/QSFP modules): Responsible for optical transmission - failure leads to fiber optic link issues.

* Fabric Module: Critical for switching between line cards - its failure leads to degraded or disrupted internal traffic paths.

These mappings help technicians isolate the source of faults and proceed with the correct RMA or replacement procedure.

NEW QUESTION # 86

.....

You must ensure that you can pass the 800-150 exam quickly, so you must choose an authoritative product. Our 800-150 exam materials are certified by the authority and have been tested by users. This is a product that you can definitely use with confidence. Of course, our data may make you more at ease. The passing rate of 800-150 Preparation prep reached 99%, which is a very incredible value, but we did. If you want to know more about our products, you can consult our staff, or you can download our free trial version of our 800-150 practice engine. We are looking forward to your joining.
