ISACA Certified Cybersecurity Operations Analyst Sample Questions (Q59-Q64):

NEW QUESTION # 59

Which of the following cyber crime tactics involves targets being contacted via text message by an attacker posing as a legitimate entity?

- A. Cyberstalking
- **B. Smishing**
- C. Vishing
- D. Hacking

Answer: B

Explanation:

Smishing(SMS phishing) involvessending malicious text messagesposing as legitimate entities to trick individuals into disclosing sensitive information or clicking malicious links.

* Social Engineering via SMS:Attackers often impersonate trusted institutions (like banks) to induce fear or urgency.

* Tactics:Typically include fake alerts, password reset requests, or promotional offers.

* Impact:Users may unknowingly provide login credentials, credit card information, or download malware.

* Example:A message claiming to be from a bank asking users to verify their account by clicking a link.

Other options analysis:

* A. Hacking:General term, does not specifically involve SMS.

* B. Vishing:Voice phishing via phone calls, not text messages.

* D. Cyberstalking:Involves persistent harassment rather than deceptive messaging.

CCOA Official Review Manual, 1st Edition References:

* Chapter 6: Social Engineering Tactics:Explores phishing variants, including smishing.

* Chapter 8: Threat Intelligence and Attack Techniques:Details common social engineering attack vectors.

NEW QUESTION # 60

Which of the following processes is MOST effective for reducing application risk?

- A. Regular vulnerability scans after deployment
- **B. Regular monitoring of application use**

- C. Regular third-party risk assessments
- **D. Regular code reviews throughout development**

Answer: D

Explanation:

Performing regular code reviews throughout development is the most effective method for reducing application risk:

- * **Early Detection:** Identifies security vulnerabilities before deployment.
- * **Code Quality:** Improves security practices and coding standards among developers.
- * **Static Analysis:** Ensures compliance with secure coding practices, reducing common vulnerabilities (like injection or XSS).
- * **Continuous Improvement:** Incorporates feedback into future development cycles.

Incorrect Options:

- * **A. Regular third-party risk assessments:** Important but does not directly address code-level risks.
- * **C. Regular vulnerability scans after deployment:** Identifies issues post-deployment, which is less efficient.
- * **D. Regular monitoring of application use:** Helps detect anomalies but not inherent vulnerabilities.

Exact Extract from CCOA Official Review Manual, 1st Edition:

Refer to Chapter 6, Section "Secure Software Development," Subsection "Code Review Practices" - Code reviews are critical for proactively identifying security flaws during development.

NEW QUESTION # 61

Which of the following roles is responsible for approving exceptions to and deviations from the incident management team charter on an ongoing basis?

- A. Incident response manager
- **B. Chief information security officer (CISO)**
- C. Cybersecurity analyst
- D. Security steering group

Answer: B

Explanation:

The CISO is typically responsible for approving exceptions and deviations from the incident management team charter because:

- * **Strategic Decision-Making:** As the senior security executive, the CISO has the authority to approve deviations based on risk assessments and business priorities.
- * **Policy Oversight:** The CISO ensures that any exceptions align with organizational security policies.
- * **Incident Management Governance:** As part of risk management, the CISO is involved in high-level decisions impacting incident response.

Other options analysis:

- * **A. Security steering group:** Advises on strategy but does not typically approve operational deviations.
- * **B. Cybersecurity analyst:** Executes tasks rather than making executive decisions.
- * **D. Incident response manager:** Manages day-to-day operations but usually does not approve policy deviations.

CCOA Official Review Manual, 1st Edition References:

- * Chapter 2: Security Governance: Defines the role of the CISO in managing incident-related exceptions.
- * Chapter 8: Incident Management Policies: Discusses decision-making authority within incident response.

NEW QUESTION # 62

Which of the following should occur FIRST during the vulnerability identification phase?

- A. Run vulnerability scans of all in-scope assets.
- B. Determine the categories of vulnerabilities possible for the type of asset being tested.
- C. Assess the risks associated with the vulnerabilities identified.
- **D. Inform relevant stakeholders that vulnerability scanning will be taking place.**

Answer: D

Explanation:

During the vulnerability identification phase, the first step is to inform relevant stakeholders about the upcoming scanning activities:

- * **Minimizing Disruptions:** Prevents stakeholders from mistaking scanning activities for an attack.
- * **Change Management:** Ensures that scanning aligns with operational schedules to minimize downtime.

* Stakeholder Awareness:Helps IT and security teams prepare for the scanning process and manage alerts.

* Authorization:Confirms that all involved parties are aware and have approved the scanning.

Incorrect Options:

* B. Run vulnerability scans:Should only be done after proper notification.

* C. Determine vulnerability categories:Done as part of planning, not the initial step.

* D. Assess risks of identified vulnerabilities:Occurs after the scan results are obtained.

Exact Extract from CCOA Official Review Manual, 1st Edition:

Refer to Chapter 6, Section "Vulnerability Management," Subsection "Preparation and Communication" - Informing stakeholders ensures transparency and coordination.

NEW QUESTION # 63

An insecure continuous integration and continuous delivery (CI/CD) pipeline would MOST likely lead to:

- A. broken access control.
- **B. software Integrity failures.**
- C. security monitoring failures.
- D. browser compatibility Issues.

Answer: B

Explanation:

An insecure CI/CD pipeline can lead to software integrity failures primarily due to the risk of:

* Code Injection:Unauthenticated or poorly controlled access to the CI/CD pipeline can allow attackers to inject malicious code during build or deployment.

* Compromised Dependencies:Automated builds may incorporate malicious third-party libraries or components, compromising the final product.

* Insufficient Access Control:Without proper authentication and authorization mechanisms, unauthorized users might modify build configurations or artifacts.

* Pipeline Poisoning:Attackers can alter the pipeline to include vulnerabilities or backdoors.

Due to the above risks, software integrity can be compromised, resulting in the distribution of tampered or malicious software.

Incorrect Options:

* B. Broken access control:This is a more general web application security issue, not specific to CI/CD pipelines.

* C. Security monitoring failures:While possible, this is not the most direct consequence of CI/CD pipeline insecurities.

* D. Browser compatibility Issues:This is unrelated to CI/CD security concerns.

Exact Extract from CCOA Official Review Manual, 1st Edition:

Refer to Chapter 6, Section "DevSecOps and CI/CD Security", Subsection "Risks and Vulnerabilities in CI

/CD Pipelines" - Insecure CI/CD pipelines can compromise software integrity due to code injection and dependency attacks.
