NEW QUESTION # 44

Which of the following are features of SAP Business Data Cloud's data integration capabilities?

There are 2 correct answers to this question.

Response:

- A. Email data import
- B. Manual data entry forms
- C. Real-time data replication
- D. Batch data processing

Answer: C,D

NEW QUESTION # 45

In SAP Analytics Cloud, you have a story based on an import model. The transactional data in the model's data source changes. How can you update the data in the model?

- A. Schedule the import
- B. Refresh the data source
- C. Allow model import
- D. Refresh the story

Answer: A

Explanation:

When an SAP Analytics Cloud (SAC) story is based on an import model, the data is physically copied and stored within SAC. Therefore, simply refreshing the story (option A) will only update the visualization with the data already in the model and will not pull new data from the source. Similarly, "Allow model import" (option B) isn't a direct action for updating data, but rather a prerequisite for the import process itself. "Refresh the data source" (option C) is not an action performed within SAC for an import model. To update the data in the model when the transactional data in its source changes, you must schedule the import (option D) or manually re-run the import process. This process re-fetches the latest data from the original source system and updates the SAC import model, ensuring your story reflects the most current information. This scheduling can be set up to occur at regular intervals, keeping the model synchronized with the source data.
