WGU Web-Development-Applications Exam Syllabus Topics:

Topic	Details
Topic 1	• HTML5, CSS3, and JavaScript Foundations: This section of the exam measures skills of Web Developers and covers the essential ability to manually code using HTML5, CSS3, and JavaScript to create structured, visually styled, and interactive web content. It focuses on building accurate page layouts, applying modern styling rules, and writing basic scripts that support user interaction. The aim is to ensure candidates can construct professional web documents using current standards and properly integrate all three technologies.

Topic 2	• Validation, Testing, and Form Development: This section of the exam measures skills of Web Developers and covers the ability to validate code, test web pages for accuracy, and build form components. It includes understanding how to detect errors, ensure compliance with standards, and implement form fields with inline validation to improve user experience. The focus is on creating forms that work reliably, meet usability expectations, and maintain proper data entry flow.
Topic 3	• Creating Adaptive Web Documents and Pages: This section of the exam measures skills of Front-End Designers and covers the techniques needed to make websites display correctly across traditional desktops and mobile devices. It emphasizes adaptive page layout, flexible formatting, and user-friendly presentation so that content remains readable and functional on screens of different sizes. Candidates are expected to show an understanding of how to create consistent designs that respond smoothly to device changes.
Topic 4	• Responsive Web Design (RWD) for Browsers and Apps: This section of the exam measures skills of Front-End Designers and covers concepts related to mobile-first layout planning, responsive frameworks, and techniques used to ensure compatibility with modern browsers and applications. Candidates must demonstrate how to adjust elements for better usability on mobile devices and apply responsive strategies that allow a single design to function seamlessly across various environments.

Web-Development-Applications Exam Certification, Web-Development-Applications Related Exams

Our products are definitely more reliable and excellent than other exam tool. What is more, the passing rate of our study materials is the highest in the market. There are thousands of customers have passed their exam and get the related certification. After that, all of their Web-Development-Applications Exam torrents were purchase on our website. In fact, purchasing our Web-Development-Applications actual test means you have been half success. Good decision is of great significance if you want to pass the Web-Development-Applications exam for the first time.

WGU Web Development Applications Sample Questions (Q125-Q130):

NEW QUESTION # 125
Which framework assists designers with adaptive page layout?

- A. Bootstrap
- B. Modernizr
- C. Knockout
- D. React

Answer: A

Explanation:
> "Bootstrap is a front-end framework that provides a responsive grid system and prebuilt components for adaptive and responsive web design. It allows layouts to adjust to screen size dynamically."
>
> React and Knockout are JavaScript libraries for UI rendering and data-binding. Modernizr is a feature detection library, not a layout framework.

* Bootstrap Official Documentation
* MDN Web Docs: Responsive Frameworks Overview

NEW QUESTION # 126
Which HTML5 input type allows users to enter a value from 1 to 100 using a slider control?

- A. number

- B. search
- C. text
- D. range

Answer: D

Explanation:
> "The `input` type `range` displays a slider control for selecting numeric values within a specified range."
>
> Example:
```html
<input type="range" min="1" max="100">
```
* `number` allows numeric input via keyboard, but not a slider.
* `text` and `search` are for string input.
References:
* MDN Web Docs: <input type="range">
* HTML Living Standard: Forms Module

Which markup renders a drop-down calendar for selecting dates in most browsers?
Q <input class="date"> 0 <input type="*,date"> Q <input name="date"> 0 <input id="date"> Here are the corrected and fully formatted answers for Questions 54 through 57, using your requested structure:

NEW QUESTION # 127
Which attribute displays help text in an input field without specifying an actual value for the input?

- A. Placeholder
- B. name
- C. Default
- D. For

Answer: A

Explanation:
Theplaceholderattribute in an<input>element displays help text in the input field without specifying an actual value for the input. This text disappears when the user starts typing.
* Placeholder Attribute: This attribute provides a hint to the user about what type of information is expected in the field.
* Usage Example:
<input type="text" placeholder="Enter your name">
The input field will show "Enter your name" as help text.
:
MDN Web Docs onplaceholder
W3C HTML Specification on Input Placeholder

NEW QUESTION # 128
Which method allows the end user to enter text as an answer to a question as the page loads?

- A. Write
- B. alert
- C. Confirm
- D. Prompt

Answer: D

Explanation:
Thepromptmethod in JavaScript displays a dialog box that prompts the user for input, allowing the end user to enter text as an answer to a question when the page loads.
* promptMethod: Thepromptmethod displays a dialog box with an optional message prompting the user to input some text. It

returns the text entered by the user ornullif the user cancels the dialog.
* Usage Example:
let userInput = prompt("Please enter your name:", "Harry Potter");
console.log(userInput);
In this example, a prompt dialog asks the user to enter their name, and the entered text is logged to the console.

MDN Web Docs onprompt
W3C HTML Specification on Dialogs

NEW QUESTION # 129

What is a common technique on mobile web pages to ensure users can access all content if the mobile version is limiting?

- A. Access to multiple link layers
- B. Navigation links requiring scrolling
- C. A link to the full site
- D. Targeted site content

Answer: C

Explanation:
Providing a link to the full site on a mobile web page is a common technique to ensure users can access all content if they find the mobile version limiting.
* Advantages:
* Access to Full Functionality: Users can switch to the desktop version if they need features not available on the mobile site.
* User Control: It gives users the choice to view the site in a layout they are more comfortable with.
* Other Options:
* A. Access to multiple link layers: This does not directly address user needs for full site access.
* B. Targeted site content: While important, it does not replace the need for a full site link.
* D. Navigation links requiring scrolling: This can worsen the user experience on mobile devices.
