| Topic 4 | <ul style="list-style-type: none"> • Configure Nutanix Files with advanced features • Determine the appropriate method to ensure data availability • recoverability |
| Topic 5 | <ul style="list-style-type: none"> • Analyze and Monitor Nutanix Unified Storage • Describe the use of Data Lens for data security |
| Topic 6 | <ul style="list-style-type: none"> • Configure Nutanix Objects • Describe how to monitor performance and usage |

Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q28-Q33):

NEW QUESTION # 28

An administrator created a bucket for an upcoming project where internal users as well as an outside consultant Object Browser. The administrator needs to provide both internal and consultant access to the same bucket. The organization would like to prevent internal access to the consultant, based on their security policy. Which two items are requires to fulfill this requirement (Choose two.)

- A. Configure Directory Services under the Access Keys section
- B. Generate access keys using third-party software.
- C. Generate access keys based on directory and email-based users.
- D. Install third-party software for bucket access to all users.

Answer: A,C

Explanation:

Nutanix Objects supports directory services integration, which allows administrators to configure access keys based on directory and email-based users. This enables granular access control and security for buckets and objects. The administrator can configure directory services under the Access Keys section in Prism Central, and then generate access keys for internal users from the directory service and for the consultant from an email address². NEW QUESTION # 29

Which confirmation is required for an Objects deployment?

- A. Configure Domain Controllers on both Prism Element and Prism Central.
- B. Configure NTP servers on both Prism Element and Prism Central.
- C. Configure a dedicated storage container on Prism Element or Prism Cent
- D. Configure VPC on both Prism Element and Prism Central.

Answer: B

Explanation:

The configuration that is required for an Objects deployment is to configure NTP servers on both Prism Element and Prism Central. NTP (Network Time Protocol) is a protocol that synchronizes the clocks of devices on a network with a reliable time source. NTP servers are devices that provide accurate time information to other devices on a network. Configuring NTP servers on both Prism Element and Prism Central is required for an Objects deployment, because it ensures that the time settings are consistent and accurate across the Nutanix cluster and the Objects cluster, which can prevent any synchronization issues or errors. Reference: Nutanix Objects User Guide, page 9; Nutanix Objects Deployment Guide

NEW QUESTION # 30

An administrator has created a distributed share on the File cluster. The administrator connects to the share using Windows Explorer and starts creating folders in the share. The administrator observes that none of the created folder can be renamed as the company naming convention requires.

How should the administrator resolve this issue?

- A. Modify the Files shares to use the NFS protocol.
- B. Use the Microsoft Shared Folder MMC Snapin.
- **C. Use the Files MMC Snapin and rename the folders.**
- D. Modify the read/write permissions on the created folders.

Answer: C

Explanation:

The administrator should resolve this issue by using the Files MMC Snap-in and renaming the folders. The Files MMC Snap-in is a tool that allows administrators to manage Files shares and exports from a Windows machine. The administrator can use the Files MMC Snap-in to connect to a distributed share or export and rename the top-level directories that are hosted by different FSVMs. Renaming the directories from Windows Explorer will not work because Windows Explorer does not recognize the distributed nature of the share or export and will try to rename all directories on the same FSVM, which will fail. Reference: Nutanix Files Administration Guide, page 35; Nutanix Files MMC Snap-in User Guide

NEW QUESTION # 31

Refer to the exhibit.

What does the "X" represent on the icon?

- A. Corrupt ISO
- B. Tiered File
- **C. Distributed shared file**
- D. Share Disconnected File

Answer: C

Explanation:

The "X" on the icon represents a distributed shared file, which is a file that belongs to a distributed share or export. A distributed share or export is a type of SMB share or NFS export that distributes the hosting of top-level directories across multiple FSVMs. The "X" indicates that the file is not hosted by the current FSVM, but by another FSVM in the cluster. The "X" also helps to identify which files are eligible for migration when using the Nutanix Files Migration Tool. References: Nutanix Files Administration Guide, page 34; Nutanix Files Migration Tool User Guide, page 10

NEW QUESTION # 32

What is the minimum and maximum file size limitations for Smart Tiering?

- A. 64 KiB minimum and 15 TiB maximum
- B. 128 IOB minimum and 5 TiB maximum
- **C. 64 KiB minimum and 5 TiB maximum**

- D. 128 KiB minimum and 13 TiB maximum

Answer: C

Explanation:

Smart Tiering is a feature that allows Files to tier data across different storage tiers based on the file size and access frequency.

Smart Tiering supports files with a minimum size of 64 KiB and a maximum size of 5 TiB2. Reference: Nutanix Files Administration Guide2
