Our loyal customers give our InsuranceSuite-Developer exam materials strong support. So we are deeply moved by their persistence and trust. Your support and praises of our InsuranceSuite-Developer study guide are our great motivation to move forward. You can find their real comments in the comments sections. There must be good suggestions for you on the InsuranceSuite-Developer learning quiz as well. And we will try our best to satisfy our customers with better quality and services.

We provide 3 versions of our InsuranceSuite-Developer exam torrent and they include PDF version, PC version, APP online version. Each version's functions and using method are different and you can choose the most convenient version which is suitable for your practical situation. For example, the PDF version is convenient for you to download and print our InsuranceSuite-Developer Test Torrent and is suitable for browsing learning. If you use the PDF version you can print our InsuranceSuite-Developer guide torrent on the papers. The PC version of our InsuranceSuite-Developer exam questions can stimulate the real exam's environment.

InsuranceSuite-Developer Exam Cram Review - Reliable InsuranceSuite-Developer Exam Dumps

InsuranceSuite-Developer practice exam will provide you with wholehearted service throughout your entire learning process. This means that unlike other products, the end of your payment means the end of the entire transaction our Guidewire InsuranceSuite-Developer Learning Materials will provide you with perfect services until you have successfully passed the Associate Certification - InsuranceSuite Developer - Mammoth Proctored Exam InsuranceSuite-Developer exam.

Guidewire Associate Certification - InsuranceSuite Developer - Mammoth Proctored Exam Sample Questions (Q128-Q133):

NEW QUESTION # 128

An insurer ran the DBCC checks against a copy of their PolicyCenter production database in a non-production environment to check for errors before promoting the code to production. Three errors with high counts were found in the category "Data update and reconciliation." What are two best practices for resolving the errors?

(Select two)

- A. Search the Knowledge Base on the Guidewire Community for solutions to the problems found.
- B. Analyze the errors to determine the root cause and correct the code responsible for the errors.
- C. Identify any bad data and write a SQL script to correct the data; run the script immediately.
- D. Wait to see if error counts increase; if they increase by more than 10%, fix the errors.
- E. Promote the code to production and run the DBCCs again to see if the same errors are found.

Answer: A,B

Explanation:

Database Consistency Checks (DBCC) are a critical part of the System Health and Quality framework. When these checks return errors, especially in categories like "Data update and reconciliation," it indicates a mismatch between the database's physical state and the application's metadata expectations.

According to Guidewire best practices, the first essential step (Option D) is root cause analysis. A developer must determine why the data is inconsistent. For example, if a high count of errors appears after a code change, it likely means a Gosu rule, an integration, or a newly added required field is not being populated correctly. Fixing the symptom with a SQL script without addressing the code responsible will only lead to the errors recurring. Addressing the logic ensures that the "faucet" of bad data is turned off before attempting to "mop up" the existing data.

The second best practice (Option E) is leveraging the Guidewire Community and Knowledge Base. Many DBCC errors, particularly those related to base application upgrades or standard entities, are well-documented. Guidewire provides specific remediation scripts or configuration adjustments for known issues.

Options A, B, and C are strictly prohibited under Guidewire SurePath standards. Running SQL scripts "immediately" without analysis can lead to further corruption. Waiting for error counts to increase (Option B) ignores potential system instability. Promoting to production (Option C) while knowing errors exist is a violation of deployment quality gates and can lead to production downtime. By combining technical analysis with community resources, developers ensure a stable transition to the production environment.

NEW QUESTION # 129

Succeed Insurance needs to extend the contact functionality to support tracking agency information. The new agency entity should have all of the fields of ABCCompany, but include fields that are specific to the agency.

Following best practices, which of the following options would implement this requirement?

- A. Add a new Agency subtype of ABCCompany. The new fields should be added to the new Agency_Ext subtype.
- B. A new array should be added to ABCCompany that points to a new Agency_Ext entity. The new fields should be added to the new Agency_Ext entity, including a foreign key pointing back to ABCCompany.
- C. A new foreign key should be added to ABCCompany that points to a new Agency_Ext entity. The new fields should be added to the new Agency entity.
- D. A new Agency_Ext entity should be added so that ABCCompany becomes a subtype of Agency_Ext. The new fields should be added to the new Agency entity.

Answer: A

Explanation:

The Guidewire data model is designed to support Subtyping, which is a powerful mechanism for creating specialized versions of existing entities. This is specifically used within the Contact and Company hierarchies.

When a requirement states that a new entity must have all the fields of an existing entity (ABCCompany) plus additional specific fields, a subtype is the correct architectural choice.

By creating an Agency subtype of ABCCompany, the new entity automatically inherits all the metadata, fields, and relationships defined on the parent ABCCompany and its ancestor, ABCContact. The developer then adds the agency-specific fields (such as "Agency License Number") directly to the subtype. This "is-a" relationship is much more efficient than using a Foreign Key (Option A) or an Array (Option C), which are intended for "has-a" relationships.

Subtyping ensures that the Agency records can still be treated as ABCCompany or ABCContact objects in Gosu logic and UI components (like search pages), while still allowing for specialized behavior and data storage.

Following naming conventions, these custom subtypes often include the _Ext suffix to distinguish them from out-of-the-box subtypes. This approach minimizes data redundancy and leverages the built-in polymorphic capabilities of the InsuranceSuite Data Model, ensuring that the system remains scalable and easy to maintain during future upgrades.

NEW QUESTION # 130

A developer is creating an entity for home inspections that contains a field for the inspection date. Which configuration of the file name and the field name fulfills the requirement and follows best practices?

- A. HomeInspection.Ext.eti, InspectionDate
- **B. HomeInspection_Ext.eti, InspectionDate.Ext**
- C. HomeInspection_Ext.etx, InspectionDate
- D. HomeInspection.eti, InspectionDate.Ext
- E. HomeInspection.etx, InspectionDate.Ext

Answer: B

Explanation:

Guidewire's Metadata Naming Conventions are strictly enforced to ensure that customer code remains distinct from Guidewire's base product code, which is essential for seamless platform upgrades.

When creating a brand-new entity, the developer must use the .eti (Entity Interface) extension. Following Cloud Delivery Standards, the entity name itself must include the _Ext suffix. Therefore, HomeInspection_Ext.eti is the correct file structure. Regarding the fields within that custom entity, Guidewire best practices recommend applying the _Ext suffix to custom columns as well (Option B), even if the entity itself is custom. This provides a consistent visual indicator in Gosu code that the developer is interacting with an extension rather than a base product element.

Option A and C use the .etx extension, which is reserved for extending existing base entities (e.g., adding a field to Claim). Option D is incorrect because it lacks the mandatory suffix on the entity name. Option E uses an invalid file naming format. Following the convention in Option B ensures the data model is compliant with Guidewire's automated quality gates.

NEW QUESTION # 131

A business analyst has a new requirement for an additional filter on Desktop Activities. Which two options can be used to filter a query-backed ListView? (Select two)

- **A. Use a Gosu standard query filter in the filter property of a ToolbarFilterOption of a ToolbarFilter widget**
- B. Use a Gosu standard bean filter in the filter property of a ToolbarFilterOption
- C. Create a Gosu method to loop through the ListView rows adding the rows that match the criteria
- **D. Add a ToolbarFilterOption to the ToolbarFilter widget**
- E. Create an array of filtered values to populate the ListView

Answer: A,D

Explanation:

In Guidewire PCF development, filtering a query-backed ListView (one that uses a QueryProcessor) must be done efficiently to avoid loading thousands of records into memory. According to the InsuranceSuite Developer Fundamentals course, the standard tool for this is the ToolbarFilter widget.

A ToolbarFilter acts as a container for one or more ToolbarFilterOption widgets (Option C). Each option represents a choice in the dropdown menu for the user. To ensure performance, specifically for query-backed lists, the developer should use a Gosu standard query filter (Option B) in the filter property. Unlike a "bean filter," which filters objects already in memory, a query filter allows the Guidewire platform to modify the underlying SQL statement. This ensures that only the records matching the selected filter are ever retrieved from the database, significantly reducing the application server's load.

Options D and E are "anti-patterns." Manual looping or creating custom arrays bypasses the optimized Query API, leading to "OutOfMemory" errors or severe performance degradation when dealing with large volumes of data, such as an insurer's entire set of desktop activities.

NEW QUESTION # 132

An analyst is examining the process for promoting a verified build from the development environment to production. Which statements accurately describe key steps in the flow of code changes between physical star systems in GWCP, according to the training? (Choose 2)

- A. Builds are promoted sequentially from dev to pre-production and then to production physical star systems.
- B. Production database backups are not required when promoting builds.
- C. Code is directly committed from dev to production repositories.
- D. A build must be deployed to every planet in the dev star system before promotion is allowed.
- E. The Build Promotion app in Guidewire Home is used to manage the promotion process.

Answer: A,E

Explanation:

The Guidewire Cloud Platform (GWCP) enforces a rigorous and standardized path for code promotion to ensure maximum stability in production environments. This process follows the Astronomy Metaphor where code moves between logical partitions. Statement C is a fundamental truth of the cloud delivery model: Sequential Promotion. Code cannot "skip" environments. A build must first be verified in the Development Star System (on a Dev planet). Once verified, that same immutable build (Docker image) is promoted to the Pre-Production Star System for User Acceptance Testing (UAT) and Performance testing. Only after passing the "Quality Gates" in Pre-Prod can the build be promoted to the Production Star System. This sequence ensures that the exact same code being deployed to production has been thoroughly vetted in lower environments.

Statement E identifies the tool used for this management: the Build Promotion app located in Guidewire Home. This application provides a centralized interface for authorized users to select a verified build from a lower "Orbit" and promote it to a higher one. This tool abstracts the underlying complexity of the CI/CD pipeline and ensures that the promotion follows all security and compliance protocols.

Option D is incorrect because code is never "committed" directly to production; rather, a pre-compiled build image is promoted. Option B is incorrect as not every dev planet needs a deployment—only the specific verified "golden" build needs to move forward. Adhering to this sequential, tool-managed process is a key requirement of the Guidewire Cloud Standards.

NEW QUESTION # 133

.....

It is acknowledged that there are numerous InsuranceSuite-Developer learning questions for candidates for the exam, however, it is impossible for you to summarize all of the key points in so many materials by yourself. But since you have clicked into this website for InsuranceSuite-Developer practice materials you need not to worry about that at all because our company is especially here for you to solve this problem. We have a lot of regular customers for a long-term cooperation now since they have understood how useful and effective our InsuranceSuite-Developer Actual Exam is. So will you!

InsuranceSuite-Developer Exam Cram Review: https://www.practicedump.com/InsuranceSuite-Developer_actualtests.html

Guidewire Reliable InsuranceSuite-Developer Braindumps Ppt You cannot rely on others except yourself, Guidewire Reliable InsuranceSuite-Developer Braindumps Ppt Our service agents are heartedly prepared for working out any problem that the users encounter, Guidewire InsuranceSuite-Developer Exam Cram Review is the best platform for study material, As and when, Guidewire InsuranceSuite-Developer Exam Cram Review will introduce any changes in the material, our dedicated team will update the BrainDumps right away, Our technicians have been working forward to perfect our InsuranceSuite-Developer quiz torrent: Associate Certification - InsuranceSuite Developer - Mammoth Proctored Exam to prevent information leakage.

You will also see the exchanges that happen when a wireless device first Reliable InsuranceSuite-Developer Braindumps Ppt joins an AP, The personnel are gradual because they arOr belong to both and leave it, You cannot rely on others except yourself.

2026 InsuranceSuite-Developer – 100% Free Reliable Braindumps Ppt | Associate Certification - InsuranceSuite Developer - Mammoth Proctored Exam Exam Cram Review

Our service agents are heartedly prepared for InsuranceSuite-Developer working out any problem that the users encounter, Guidewire is the best platform for study material, As and when, Guidewire will introduce Authentic InsuranceSuite-Developer Exam Questions any changes in the material, our dedicated team will update the BrainDumps right away.

Our technicians have been working forward to perfect our InsuranceSuite-Developer quiz torrent: Associate Certification - InsuranceSuite Developer - Mammoth Proctored Exam to prevent information leakage.
