So many candidates have encountered difficulties in preparing to pass the 2V0-17.25 exam. But our study materials will help candidates to pass the exam easily. Our 2V0-17.25 guide questions can provide statistics report function to help the learners to find weak links and deal with them. The 2V0-17.25 Test Torrent boost the function of timing and simulating the exam. They set the timer to simulate the exam and help the learners adjust the speed and keep alert.

VMware 2V0-17.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation.

Topic 2	<ul style="list-style-type: none"> VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi, clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment.
Topic 3	<ul style="list-style-type: none"> Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments.
Topic 4	<ul style="list-style-type: none"> IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies.

2V0-17.25 Exam Guides - 2V0-17.25 Test Answers & 2V0-17.25 Exam Torrent

Our experts have worked hard for several years to formulate 2V0-17.25 exam braindumps for all examiners. Our 2V0-17.25 study materials not only target but also cover all knowledge points. And our practice materials also have a statistical analysis function to help you find out the deficiency in the learning process of 2V0-17.25 practice materials, so that you can strengthen the training for weak links. In this way, you can more confident for your success since you have improved your ability.

VMware Cloud Foundation 9.0 Administrator Sample Questions (Q11-Q16):

NEW QUESTION # 11

An organization has 3 data center sites and is implementing a solution to achieve a Recovery Point Objective (RPO) of 0 to ensure continuous availability of storage in the event of a single site failure. The sites are connected via a high bandwidth/low latency link. Which two VMware Cloud Foundation (VCF) components can be used to support this capability? (Choose two.)

- A. vSphere Replication
- B. vSAN
- C. vSphere
- D. Aria Operations
- E. NSX

Answer: B,C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

To achieve an RPO of 0 (zero data loss) with continuous availability of storage across multiple sites, VMware Cloud Foundation leverages two key components:

vSphere (A): vSphere provides the core platform for compute virtualization, including features such as VMware vSphere HA (High Availability) and VMware vSphere Fault Tolerance, both of which are integral to delivering continuous VM availability and supporting cross-site failover.

vSAN (E): vSAN can be configured in a stretched cluster deployment across the three sites. With a stretched vSAN cluster, data is synchronously replicated between sites, ensuring that all writes are committed to more than one location. This synchronous replication provides true continuous availability and a Recovery Point Objective (RPO) of 0 in the event of a single site failure, provided that the network meets high bandwidth and low latency requirements.

Other components such as Aria Operations and NSX do not provide storage-level availability or synchronous data protection. vSphere Replication only supports asynchronous replication and cannot guarantee RPO of 0.

NEW QUESTION # 12

An administrator must deploy a new VMware Cloud Foundation (VCF) instance using a supported VCF Operations model with the smallest possible resource footprint. Which VCF Operations deployment model should be used?

- A. High Availability
- B. Stretched Cluster
- C. Continuous Availability
- **D. Simple**

Answer: D

Explanation:

VCF 9.0 documents two Operations for Logs/Operations models- Simple (Standard) and High Availability (Cluster) -and highlight that Simple is the minimal footprint option intended for test/dev: " Architecture flexibility: Can be deployed in a Simple or Highly Available Cluster deployment.

Recommended deployment is a HA Cluster... Simple deployment is for test/dev environments, it is not for production use cases. " By contrast, HA/clustered models increase resources to provide redundancy at scale. Since the requirement is the smallest resource footprint , the Simple model is the correct selection. (Stretched/Continuous Availability options are not listed VCF Operations models in this context.)

NEW QUESTION # 13

An administrator is tasked to monitor business-critical Virtual Machines (VMs) within a VMware Cloud Foundation (VCF) fleet. The following requirements must be met:

- The existing policy named "Organization Policy" must be used for the entire environment.
- Only business-critical VMs must be assigned additional metrics.
- Business-critical VMs will be organized based on a naming schema.

Which three steps must an administrator complete to satisfy the requirements? (Choose three.)

- A. Create a new policy under "Base Settings" and enable the additional metrics.
- **B. Assign the Custom Group to the new policy.**
- **C. Create a Custom Group and add the business-critical VMs.**
- D. Assign the Custom Datacenter to the new policy.
- E. Create a Custom Datacenter and add the business-critical VMs.
- **F. Create a new policy under "Organization Policy" and enable the additional metrics.**

Answer: B,C,F

Explanation:

Create a child policy under the existing Organization Policy (C): Policies can inherit settings from parent policies. By creating a child policy under Organization Policy, administrators can apply additional metrics without overriding global policies.

Create a Custom Group (F): Custom Groups allow dynamic membership based on naming conventions or criteria. In this case, business-critical VMs can be grouped automatically by naming schema.

Assign the Custom Group to the new child policy (B): This ensures that the additional metrics only apply to the business-critical VMs in the Custom Group.

NEW QUESTION # 14

An administrator has been tasked with providing audit information from VMware Cloud Foundation (VCF) such as logins and configuration changes in VCF Operations. What must be configured to provide the required information?

- A. Enable Event logs in every vCenter server.
- B. Enable Audit Events.
- C. Configure Audit logs for every VCF instance.
- **D. Integrate VCF Operations for Logs.**

Answer: D

Explanation:

The VCF 9.0 Logging and Auditing Guide explains that audit information-including user logins, configuration changes, and API requests-is collected and made searchable through VCF Operations for Logs. The extract states:

"VCF Operations for Logs provides centralized log aggregation and auditing for all VCF services, including audit trails of logins and configuration changes." Option A (audit logs per instance) is unnecessary because auditing is centralized. Option C (Enable Audit Events) is not a standalone step; it is a capability surfaced through Logs. Option D (Event logs in vCenter) covers only vCenter, not fleet-wide audit trails. Therefore, the correct step is to integrate VCF Operations for Logs.

NEW QUESTION # 15

An administrator is configuring a virtual infrastructure that supports a mix of workloads, including database servers, file servers, and web applications. The administrator is considering implementing memory tiering.

What is a use case for enabling memory tiering?

- A. Enhancing availability during host hardware failures by decreasing dependency on external storage.
- B. Boosting CPU throughput for compute-heavy web applications.
- C. Optimizing memory usage for large, memory-intensive workloads like in-memory databases.
- D. Minimizing swap usage for virtual machines with small memory sizes.

Answer: C
