It also covers the configuration changes using Terraform Apply and its options. |
| Topic 4 | <ul style="list-style-type: none"> • Develop and troubleshoot dynamic configuration: This section deals with topics such as using language features to validate configuration query providers using data sources, computing and interpolating data using HCL functions, and using meta-arguments in configuration. |

HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q139-Q144):

NEW QUESTION # 139

In a Terraform Cloud workspace linked to a version control repository speculative plan run start automatically commit changes to version control.

- A. True
- B. False

Answer: A

Explanation:

When you use a remote backend that needs authentication, HashiCorp recommends that you:

NEW QUESTION # 140

You have never used Terraform before and would like to test it out using a shared team account for a cloud provider. The shared team account already contains 15 virtual machines (VM). You develop a Terraform configuration containing one VM. perform terraform apply, and see that your VM was created successfully.

What should you do to delete the newly-created VM with Terraform?

- A. The Terraform state file contains all 16 VMs in the team account. Execute terraform destroy and select the newly-created VM.
- B. Delete the Terraform state file and execute terraform apply.
- C. Delete the VM using the cloud provider console and terraform apply to apply the changes to the Terraform state file.
- D. The Terraform state file only contains the one new VM. Execute terraform destroy.

Answer: D

Explanation:

This is the best way to delete the newly-created VM with Terraform, as it will only affect the resource that was created by your configuration and state file. The other options are either incorrect or inefficient.

NEW QUESTION # 141

You have created a main.tf Terraform configuration consisting of an application server, a database and a load balanced. You ran terraform apply and Terraform created all of the resources successfully.

Now you realize that you do not actually need the load balancer, so you run terraform destroy without any flags. What will happen?

- A. Terraform will immediately destroy all the infrastructure
- B. Terraform will prompt you to confirm that you want to destroy all the infrastructure
- C. Terraform will prompt you to pick which resource you want to destroy
- D. Terraform will destroy the application server because it is listed first in the code
- E. Terraform will destroy the main, tf file

Answer: B

Explanation:

Explanation

This is what will happen if you run terraform destroy without any flags, as it will attempt to delete all the resources that are associated

with your current working directory or workspace. You can use the `-target` flag to specify a particular resource that you want to destroy.

NEW QUESTION # 142

If a DevOps team adopts AWS CloudFormation as their standardized method for provisioning public cloud resources, which of the following scenarios poses a challenge for this team?

- A. The team is asked to manage a new application stack built on AWS-native services
- B. The team is asked to build a reusable code based that can deploy resources into any AWS region
- C. The organization decides to expand into Azure wishes to deploy new infrastructure
- D. The DevOps team is tasked with automating a manual, web console-based provisioning.

Answer: C

Explanation:

Explanation

This is the scenario that poses a challenge for this team, if they adopt AWS CloudFormation as their standardized method for provisioning public cloud resources, as CloudFormation only supports AWS services and resources, and cannot be used to provision infrastructure on other cloud platforms such as Azure.

NEW QUESTION # 143

Which command should you run to check if all code in a Terraform configuration that references multiple modules is properly formatted without making changes?

- A. `terraform fmt -check`
- B. `terraform fmt -check -recursive`
- C. `terraform fmt -list -recursive`
- D. `terraform fmt -write=false`

Answer: B

Explanation:

Explanation

This command will check if all code in a Terraform configuration that references multiple modules is properly formatted without making changes, and will return a non-zero exit code if any files need formatting. The other commands will either make changes, list the files that need formatting, or not check the modules.

NEW QUESTION # 144

.....
