For most users, access to the relevant qualifying examinations may be the first, so many of the course content related to qualifying examinations are complex and arcane. According to these ignorant beginners, the D-PWF-OE-00 Exam Questions set up a series of basic course, by easy to read, with corresponding examples to explain at the same time, the Dell PowerFlex Operate Exam study question let the user to be able to find in real life and corresponds to the actual use of learned knowledge, deepened the understanding of the users and memory. Because many users are first taking part in the exams, so for the exam and test time distribution of the above lack certain experience, and thus prone to the confusion in the examination place, time to grasp, eventually led to not finish the exam totally.

At Prep4SureReview, we stand behind our EMC D-PWF-OE-00 Exam Questions and offer a money-back guarantee in the event of failure. We are confident that our Dell PowerFlex Operate Exam (D-PWF-OE-00) exam questions and practice test engine will provide you with all the information and tools you need to pass the exam with flying colors. Plus, for a limited time, we are offering a 20% discount on your purchase. Don't wait – invest in your future and advance your career with Prep4SureReview today.

Our D-PWF-OE-00 exam questions own a lot of advantages that you can't imagine. First of all, all content of our D-PWF-OE-00

study guide is accessible and easy to remember, so no need to spend a colossal time to practice on it. Second, our D-PWF-OE-00 training quiz is efficient, so you do not need to disassociate yourself from daily schedule. Just practice with our D-PWF-OE-00 learning materials on a regular basis and everything will be fine.

EMC Dell PowerFlex Operate Exam Sample Questions (Q28-Q33):

NEW QUESTION # 28

What is a key requirement for adding new nodes to an existing PowerFlex cluster?

- A. Preconfigure deduplication on the new nodes
- B. Ensure the new nodes are in the same Protection Domain
- C. Validate hardware compatibility with the cluster
- D. Assign VLAN tags for replication traffic

Answer: C

Explanation:

Validate hardware compatibility (Option C): The most critical technical requirement is ensuring the new nodes are compatible with the existing cluster. This includes verifying that the CPU, RAM, and most importantly, the network interface cards (NICs) and storage devices match the existing nodes or are supported in a mixed-node configuration. Adding a node with incompatible hardware can cause instability or performance degradation (the "straggler" effect).

NEW QUESTION # 29

Which feature provides point-in-time copies of volumes?

- A. Replication
- B. Mapping
- C. Snapshot
- D. Rebalance

Answer: C

Explanation:

Snapshots create point-in-time copies for backup or recovery. Replication provides redundancy but not point-in-time copies.

NEW QUESTION # 30

Which tasks are automated when configuring snapshots in PowerFlex? (Choose two).

- A. Managing snapshot retention policies
- B. Automating snapshot replication
- C. Scheduling snapshot creation
- D. Assigning snapshots to fault sets

Answer: A,C

Explanation:

These tasks are handled by the Snapshot Policy feature in PowerFlex.

* Scheduling snapshot creation (Option A): Administrators can define a policy (e.g., "Gold Policy") that triggers a snapshot every 15 minutes. Once applied to a volume, the system automates this trigger.

* Managing snapshot retention policies (Option C): The policy also dictates the lifecycle of the snapshot. For example, "Keep 10 hourly snapshots and 5 daily snapshots." As new snapshots are created, the system automatically deletes the oldest ones to free up space and maintain the defined retention count.

Incorrect Options:

* Assigning to Fault Sets (B): Snapshots reside in the same Storage Pool as the source volume; they are not assigned to Fault Sets.

* Automating replication (D): While replication uses snapshots, the Snapshot Policy feature itself is distinct from the Replication Consistency Group configuration.

NEW QUESTION # 31

What is the benefit of enabling deduplication in PowerFlex storage?

- A. Increases node discovery rates
- **B. Reduces data redundancy and capacity footprint**
- C. Ensures fault tolerance
- D. Enhances data replication speed

Answer: B

Explanation:

Deduplication (often paired with compression) is an efficiency feature available in PowerFlex Fine Granularity (FG) storage pools.

* Reduces data redundancy (Option A): The primary purpose of inline deduplication is to identify repeated data patterns (blocks) as they are written to the system. Instead of writing the same 4KB block of zeroes or identical OS files multiple times, PowerFlex writes it once and creates pointers for subsequent writes. This significantly reduces the physical storage capacity required to store data, particularly in VDI (Virtual Desktop Infrastructure) or virtualized server environments where many VMs share similar OS files.

Note: Deduplication is a trade-off; it saves space but requires more CPU/RAM overhead on the Storage Data Servers (SDS).

NEW QUESTION # 32

What is the minimum bandwidth requirement for replicating volumes between PowerFlex clusters?

- A. 10 Gbps
- B. 1 Gbps
- **C. 100 Mbps**
- D. 10 Mbps

Answer: C

Explanation:

* 100 Mbps: While PowerFlex replication is highly efficient and only sends unique data chunks (deltas), the supported minimum reliable bandwidth for a WAN link between clusters is typically 100 Mbps.

* Reasoning: Below this speed, even moderate change rates in a production database would likely cause the replication journal to fill up faster than data can be drained to the remote site. This would lead to a "Buffer Full" state, causing the replication to pause or the system to lose its Recovery Point Objective (RPO) compliance.
