Identity-and-Access-Management-Architect 유효한 인증 공부자료 최신 인기 시험 덤프 샘플문제

Itexamdump Salesforce Identity-and-Access-Management-Architect 덤프는 Salesforce Identity-and-Access-Management-Architect 실제 시험 변화의 기반에서 스케줄에 따라 업데이트 합니다. 만일 테스트에 어떤 변화가 생긴다면 필수로 2 일간의 근무일 안에 Salesforce Identity-and-Access-Management-Architect 덤프를 업데이트 하여 고객들이 테스트에 성공적으로 합격 할 수 있도록 업데이트 된 버전을 구매후 서비스로 제공해드립니다. 업데이트할수 없는 상황이라면 다른 적중률 좋은 덤프로 바꿔드리거나 덤프비용을 환불해드립니다.

Salesforce Certified Identity 및 Access Management Architect가 되려면 후보자가 엄격한 인증 시험을 통과해야 합니다. 시험은 객관식 질문으로 구성되며 3 시간 동안 시간이 걸립니다. 응시자는 시험에 합격하고 인증을 받으려면 최소 65%의 점수를 얻어야 합니다.

최신 Identity and Access Management Designer Identity-and-Access-Management-Architect 무료 샘플문제 (Q176-Q181):

질문 # 176

Universal Containers (UC) uses a home-grown Employee portal for their employees to collaborate. UC decides to use Salesforce Ideas to allow employees to post Ideas from the Employee portal. When users click on some of the links in the Employee portal, the users should be redirected to Salesforce, authenticated, and presented with the relevant pages. What OAuth flow is best suited for

this scenario?

- A. User-Agent flow
- **B. Web Server flow**
- C. SAML Bearer Assertion flow
- D. Web Application flow

정답: B

설명:

The best OAuth flow for this scenario is the web server flow. The web server flow is an OAuth authorization flow that allows a web application, such as UC's employee portal, to obtain an access token and a refresh token from Salesforce after the user grants permission. The web application can then use the access token to access Salesforce data and features, such as posting ideas, and use the refresh token to obtain a new access token when the previous one expires or becomes invalid. This flow is suitable for UC's scenario because it allows users to be redirected to Salesforce, authenticated, and presented with the relevant pages when they click on some of the links in the employee portal. This flow also provides a secure and seamless user experience by using a confidential client secret that is stored on the web server and not exposed to the browser.

The other options are not valid OAuth flows for this scenario. The web application flow is not a standard term for OAuth, but it could refer to the user-agent flow, which is an OAuth authorization flow that allows a browser or web-view, such as a mobile app or a desktop app, to obtain an access token from Salesforce by using a script or a pop-up window. This flow is not suitable for UC's scenario, as it does not use a web server or a client secret, and it does not provide a refresh token. The SAML bearer assertion flow is an OAuth authorization flow that allows an external application to obtain an access token from Salesforce by using a SAML assertion from an identity provider (IdP) that verifies the user's identity. This flow is not suitable for UC's scenario, as it does not involve user interaction or redirection to Salesforce. The user-agent flow is an OAuth authorization flow that allows a browser or web-view, such as a mobile app or a desktop app, to obtain an access token from Salesforce by using a script or a pop-up window. This flow is not suitable for UC's scenario, as it does not use a web server or a client secret, and it does not provide a refresh token. References:

질문 # 177

A company's external application is protected by Salesforce through OAuth. The identity architect for the project needs to limit the level of access to the data of the protected resource in a flexible way.

What should be done to improve security?

- A. Leverage external objects and data classification policies.
- **B. Create custom scopes and assign to the connected app.**
- C. Define a permission set that grants access to the app and assign to authorized users.
- D. Select "Admin approved users are pre-authorized" and assign specific profiles.

정답: B

설명:

To limit the level of access to the data of the protected resource in a flexible way, the identity architect should create custom scopes and assign them to the connected app. Custom scopes are permissions that define the specific data that an external application can access or modify in Salesforce. Custom scopes can be created using Apex or Metadata API and assigned to a connected app using OAuth 2.0 or SAML protocols. Custom scopes can provide more granular control over data access than standard scopes, which are predefined by Salesforce. References: Custom Scopes, Create and Assign Custom Scopes

질문 # 178

The executive sponsor for an organization has asked if Salesforce supports the ability to embed a login widget into its service providers in order to create a more seamless user experience.

What should be used and considered before recommending it as a solution on the Salesforce Platform?

- A. OpenID Connect Web Server Flow. Determine if the service provider is secure enough to store the client secret on.
- **B. Embedded Login. Consider whether or not it relies on third party cookies which can cause browser compatibility issues.**
- C. Salesforce REST APIs. Ensure that Secure Sockets Layer (SSL) connection for the integration is used.
- D. Embedded Login. Identify what level of UI customization will be required to make it match the service providers look and feel.

정답: B

설명:

Embedded Login is a feature that allows Salesforce to embed a login widget into any web page, such as a service provider's site, to enable users to log in with their Salesforce credentials. However, Embedded Login relies on third-party cookies, which can cause browser compatibility issues and require users to adjust their browser settings. Therefore, this should be considered before recommending it as a solution on the Salesforce Platform. References: Embedded Login, Embedded Login Implementation Guide

질문 # 179

Universal containers (UC) wants to implement Delegated Authentication for a certain subset of Salesforce users. Which three items should UC take into consideration while building the Web service to handle the Delegated Authentication request? Choose 3 answers

- A. UC should whitelist all salesforce ip ranges on their corporate firewall.
- B. The return type of the Web service method should be a Boolean value
- C. The web service needs to include Source IP as a method parameter.
- D. The web service can be written using either the soap or rest protocol.
- E. Delegated Authentication is enabled for the system administrator profile.

정답: A,B,C

질문 # 180

An administrator created a connected app for a custom web application in Salesforce which needs to be visible as a tile in App Launcher. The tile for the custom web application is missing in the app launcher for all users in Salesforce. The administrator requested assistance from an identity architect to resolve the issue.

Which two reasons are the source of the issue?

Choose 2 answers

- A. StartURL for the connected app is not set in Connected App settings.
- B. The connected app is not set in the App menu as 'Visible in App Launcher'.
- C. Session Policy is set as 'High Assurance Session required' for this connected app.
- D. OAuth scope does not include "openid".

정답: A,B

설명:

Explanation

The StartURL for the connected app is required to specify the landing page for the app. The connected app must also be set as visible in the App Launcher to appear as a tile for users. References: Connected App Basics, Manage Connected Apps
