Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q72-Q77):

NEW QUESTION # 72

Why is an administrator unable to update the running configuration for a multi-VM application in AWS using the Manage tab for the application in Calm?

- A. A required Category is not assigned.
- B. The AWS account used is invalid.
- C. It is supported only on a Nutanix platform.
- D. The provider information is missing.

Answer: D

Explanation:

To update the running configuration for a multi-VM application in AWS using the Manage tab for the application in Calm, the administrator needs to provide the provider information for the AWS account. This includes the access key, secret key, region, and VPC ID. If the provider information is missing, the administrator will not be able to perform any actions on the application from Calm. References: Nutanix Certified Professional - Multicloud Automation (NCP-MCA) Exam Blueprint Guide, page 16, section 4.1.1.

NEW QUESTION # 73

An administrator is trying to delete a category, but the option is greyed out. Which two conditions could be causing this issue? (Choose two.)

- A. The category is part of a flow policy.
- B. The category is assigned to powered-on VMs.
- C. The category is system defined.
- D. The category is user defined.

Answer: B,C

NEW QUESTION # 74

An administrator needs to send a notification to the on-call administrator if a specific mission-critical VM is rebooted after hours, as well as send an email to the Operations team for any other VMS that reboot. What two actions should the administrator take to accomplish this task? (Choose two.)

- A. Create Playbook using Alert.
- B. Use Branch Action
- C. Create Playbook using Manual Trigger
- D. use Conditional Playbook

Answer: A,D

Explanation:

The administrator should use a conditional playbook and create a playbook using alert to accomplish this task. A conditional playbook is a type of playbook that allows the administrator to define different actions based on certain conditions or criteria¹. A playbook using alert is a type of playbook that is triggered by an alert policy that monitors the VM status². By using these two features, the administrator can create a playbook that checks if the rebooted VM is the mission-critical VM and sends a notification to the on-call administrator, or else sends an email to the Operations team.

NEW QUESTION # 75

Which is the correct Macro syntax?

- A. @@{and} @@
- B. @@(and) @@
- C. @@{and}@@
- D. @@[and] @@

Answer: A

Explanation:

The correct macro syntax in Nutanix Calm is @@{and} @@. This syntax is used to reference variables and parameters within blueprints and tasks, allowing for dynamic substitution of values during execution.

References:

- * Nutanix Calm documentation on Macro Syntax.
- * Nutanix Best Practices for Using Macros.

NEW QUESTION # 76

An administrator has been manually performing routine tasks on a set interval that are listed below:

1. Acknowledging Alerts
2. Generating Reports
3. Looking up cluster details

As the environment grows, these tasks will become cumbersome to run and maintain accuracy.

Which trigger type should the administrator implement in order for these actions to occur on a set interval.

- A. Manual Trigger
- B. Webhook trigger
- C. Event Trigger
- **D. Time Trigger**

Answer: D

Explanation:

To automate routine tasks such as acknowledging alerts, generating reports, and looking up cluster details on a set interval, the administrator should implement a Time Trigger. Time Triggers allow actions to be scheduled to run at specific times or intervals, ensuring consistent execution without manual intervention.

Reference:

Nutanix Calm documentation on Triggers.
