Cisco SCAZT 300-740 Certification Study Guide

Cisco 300-740 Certification Exam Details

Cisco 300-740 certifications are globally accepted and add significant value to any IT professional. The certification gives you a profound understanding of all the workings of the network models and the devices that are utilized with it. NWExam.com is proud to provide you with the best Cisco Exam Guides.

The [Cisco 300-740](#) Exam is challenging, and thorough preparation is essential for success. This cert guide is designed to help you prepare for the SCAZT certification exam. It contains a detailed list of the topics covered on the Professional exam. These guidelines for the CCNP Security will help guide you through the study process for your certification.

To obtain Cisco Designing and Implementing Secure Cloud Access for Users and Endpoints certification, you are required to pass [CCNP Security 300-740](#) exam. This exam is created keeping in mind the input of professionals in the industry and reveals how Cisco products are used in organizations across the world.

Cisco 300-740 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Industry Security Frameworks: This section of the exam measures the skills of Cybersecurity Governance Professionals and introduces major industry frameworks such as NIST, CISA, and DISA. These frameworks guide best practices and compliance in designing secure systems and managing cloud environments responsibly.
Topic 2	<ul style="list-style-type: none"> User and Device Security: This section of the exam measures skills of Identity and Access Management Engineers and deals with authentication and access control for users and devices. It covers how to use identity certificates, enforce multifactor authentication, define endpoint posture policies, and configure single sign-on (SSO) and OIDC protocols. The section also includes the use of SAML to establish trust between devices and applications.
Topic 3	<ul style="list-style-type: none"> Application and Data Security: This section of the exam measures skills of Cloud Security Analysts and explores how to defend applications and data from cyber threats. It introduces the MITRE ATT&CK framework, explains cloud attack patterns, and discusses mitigation strategies. Additionally, it covers web application firewall functions, lateral movement prevention, microsegmentation, and creating policies for secure application connectivity in multicloud environments.
Topic 4	<ul style="list-style-type: none"> SAFE Architectural Framework: This section of the exam measures skills of Security Architects and explains the Cisco SAFE framework, a structured model for building secure networks. It emphasizes the importance of aligning business goals with architectural decisions to enhance protection across the enterprise.
Topic 5	<ul style="list-style-type: none"> Integrated Architecture Use Cases: This section of the exam measures the skills of Cloud Solution Architects and covers key capabilities within an integrated cloud security architecture. It focuses on ensuring common identity across platforms, setting multicloud policies, integrating secure access service edge (SASE), and implementing zero-trust network access models for more resilient cloud environments.
Topic 6	<ul style="list-style-type: none"> Network and Cloud Security: This section of the exam measures skills of Network Security Engineers and covers policy design for secure access to cloud and SaaS applications. It outlines techniques like URL filtering, app control, blocking specific protocols, and using firewalls and reverse proxies. The section also addresses security controls for remote users, including VPN-based and application-based access methods, as well as policy enforcement at the network edge.
Topic 7	<ul style="list-style-type: none"> Cloud Security Architecture: This section of the exam measures the skills of Cloud Security Architects and covers the fundamental components of the Cisco Security Reference Architecture. It introduces the role of threat intelligence in identifying and mitigating risks, the use of security operations tools for monitoring and response, and the mechanisms of user and device protection. It also includes strategies for securing cloud and on-premise networks, as well as safeguarding applications, workloads, and data across environments.
Topic 8	<ul style="list-style-type: none"> SAFE Key Structure: This section of the exam measures skills of Network Security Designers and focuses on the SAFE framework's key structural elements. It includes understanding 'Places in the Network'—the different network zones—and defining 'Secure Domains' to organize security policy implementation effectively.
Topic 9	<ul style="list-style-type: none"> Visibility and Assurance: This section of the exam measures skills of Security Operations Center (SOC) Analysts and focuses on monitoring, diagnostics, and compliance. It explains the Cisco XDR solution, discusses visibility automation, and describes tools for traffic analysis and log management. The section also involves diagnosing application access issues, validating telemetry for behavior analysis, and verifying user access with tools like firewall logs, Duo, and Cisco Secure Workload.

Cisco Designing and Implementing Secure Cloud Access for Users and

Endpoints Sample Questions (Q110-Q115):

NEW QUESTION # 110

The importance of VPN policies for remote users is to ensure:

- A. The use of public Wi-Fi networks for corporate access
- **B. Secure and encrypted access to corporate resources from any location**
- C. Remote users cannot access sensitive corporate resources
- D. That remote users have a slower connection to prioritize office users

Answer: B

NEW QUESTION # 111

Refer to the exhibit. An engineer must block internal users from accessing Facebook and Facebook Apps. All other access must be allowed. The indicated policy was created in Cisco Secure Firewall Management Center and deployed to the internet edge firewall; however, users still can access Facebook. Which two actions must be taken to meet the requirement? (Choose two.)

- A. Set Destination Zones to outside for rule 2.
- B. Set Applications to Facebook and Facebook Apps for rule 2.
- **C. Set Source Zones to inside for rule 1.**
- D. Set Source Zones to inside for rule 2.
- **E. Set Destination Zones to outside for rule 1.**

Answer: C,E

Explanation:

In the provided screenshot of Cisco Secure Firewall Management Center (FMC), the rule labeled "Block Facebook" is intended to block access to Facebook and Facebook Apps. However, the rule lacks correct zone configurations, which is why the block is ineffective.

Per Cisco's best practices outlined in the Designing and Implementing Secure Cloud Access for Users and Endpoints (SCAZT) documentation and Cisco Secure Firewall documentation:

The source zone should reflect where the traffic is originating from—in this case, from internal users.

Therefore, Source Zone must be set to inside (Answer: E).

The destination zone should reflect where the traffic is headed—in this case, towards the internet. So, Destination Zone must be set to outside (Answer: D).

Without properly defining source and destination zones, FMC rules may not match the traffic correctly, resulting in traffic being incorrectly allowed.

NEW QUESTION # 112

Advanced app control policies are implemented to:

- A. Allow all applications equally without any restrictions
- **B. Distinguish between and control individual application actions**
- C. Limit the bandwidth usage of applications
- D. Increase the speed of cloud applications

Answer: B

NEW QUESTION # 113

An engineer configures trusted endpoints with Active Directory with Device Health to determine if an endpoint complies with the policy posture. After a week, an alert is received by one user, reporting problems accessing an application. When the engineer verifies the authentication report, this error is found:

"Endpoint is not trusted because Cisco Secure Endpoint check failed, Check user's endpoint in Cisco Secure Endpoint." Which action must the engineer take to permit access to the application again?

- A. Verify the Cisco Secure Endpoint admin panel, check the Inbox tab, verify the status of the machine, and after a complete process of analysis, mark the computer as Resolved to permit the user to authenticate again.
- B. Verify the Cisco Secure Endpoint admin panel and approve the access to the user on the Management tab after a complete virus check of the user's laptop.
- C. Verify the Trusted Endpoints policy to verify the status of the machine, and after a complete process of analysis, permit the machine to have access to the application.
- D. Verify the Duo admin panel, check the EndPoints tab, verify the status of the machine, and after a complete process of analysis, mark the computer as Resolved to permit the user to authenticate again.

Answer: A

Explanation:

Cisco Secure Endpoint (formerly AMP for Endpoints) includes an "Inbox" tab where detected threats and flagged endpoints are listed. When Duo Trusted Endpoints integration is in place, an endpoint may be denied access if it fails posture checks. The correct workflow includes reviewing the machine's status in Cisco Secure Endpoint and marking the incident as "Resolved" in the Inbox tab to restore authentication.

This process is described in SCAZT Section 2 (User and Device Security, Pages 44-46) for enforcing endpoint trust with Secure Endpoint and Duo Trusted Endpoints integration.

Reference: Designing and Implementing Secure Cloud Access for Users and Endpoints (SCAZT), Section 2, Pages 44-46

NEW QUESTION # 114

The term Security Services Edge (SSE) refers to:

- A. Physical security measures at the perimeter of a network
- B. A comprehensive security solution that combines multiple functions like SWG, CASB, and ZTNA
- C. An outdated security model no longer used in modern networks
- D. A decrease in security measures for edge devices

Answer: B
