Fantastic IDP Sample Exam by PrepAwayPDF

We provide you with free update for one year for IDP study guide, that is to say, there no need for you to spend extra money on update version. The update version for IDP exam materials will be sent to your email automatically. In addition, IDP exam dumps are compiled by experienced experts who are quite familiar with the exam center, therefore the quality can be guaranteed. You can use the IDP Exam Materials at ease. We have online and offline service, and if you have any questions for IDP training materials, don’t hesitate to consult us.

CrowdStrike IDP Exam Syllabus Topics:

Topic	Details
Topic 1	• User Assessment: Examines user attributes, differences between users • endpoints • entities, risk baselining, risky account types, elevated privileges, watchlists, and honeytoken accounts.
Topic 2	• Zero Trust Architecture: Covers NIST SP 800-207 framework, Zero Trust principles, Falcon's implementation, differences from traditional security models, use cases, and Zero Trust Assessment score calculation.
Topic 3	• GraphQL API: Covers Identity API documentation, creating API keys, permission levels, pivoting from Threat Hunter to GraphQL, and building queries.
Topic 4	• Threat Hunting and Investigation: Focuses on identity-based detections and incidents, investigation pivots, incident trees, detection evolution, filtering, managing exclusions and exceptions, and risk types.

Topic 5	- Falcon Fusion SOAR for Identity Protection: Explores SOAR workflow automation including triggers, conditions, actions, creating custom - templated - scheduled workflows, branching logic, and loops.
Topic 6	- Falcon Identity Protection Fundamentals: Introduces the four menu categories (monitor, enforce, explore, configure), subscription differences between ITD and ITP, user roles, permissions, and threat mitigation capabilities.
Topic 7	- Multifactor Authentication (MFA) and Identity-as-a-service (IDaaS) Configuration Basics: Focuses on accessing and configuring MFA and IDaaS connectors, configuration fields, and enabling third-party MFA integration.
Topic 8	- Identity Protection Tenets: Examines Falcon Identity Protection's architecture, domain traffic inspection, EDR complementation, human vulnerability protection, log-free detections, and identity-based attack mitigation.
Topic 9	- Risk Assessment: Covers entity risk categorization, risk and event analysis dashboards, filtering, user risk reduction, custom insights versus reports, and export scheduling.
Topic 10	- Configuration and Connectors: Addresses domain controller monitoring, subnet management, risk settings, MFA and IDaaS connectors, authentication traffic inspection, and country-based lists.

IDP Exam Dumps - Secret To Pass In First Attempt [2026]

Many exam candidates feel hampered by the shortage of effective IDP preparation quiz, and the thick books and similar materials causing burden for you. Serving as indispensable choices on your way of achieving success especially during this IDP Exam, more than 98 percent of candidates pass the exam with our IDP training guide and all of former candidates made measurable advance and improvement.

CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q51-Q56):

NEW QUESTION # 51
Falcon Identity Protection monitors network traffic to build user behavioral profiles to help identify unusual user behavior. How can this be beneficial to create a Falcon Fusion workflow?

- A. Falcon Fusion will only send emails to the user
- B. Falcon Fusion works with your IT policy enforcement through the use of identity and behavioral analytics
- C. Falcon Fusion is not identity based
- D. Falcon Fusion will only work with certain users

Answer: B

Explanation:
Falcon Identity Protection continuously inspects authentication traffic and network behavior to establish behavioral baselines for users and accounts. These baselines enable the platform to detect deviations that indicate potential compromise, misuse, or insider threat activity. This behavioral intelligence directly enhances the effectiveness ofFalcon Fusion workflows.
Falcon Fusion leveragesidentity and behavioral analyticsas decision points within workflows, allowing automated actions to be triggered when abnormal behavior is detected. For example, a workflow can automatically enforce MFA, notify administrators, isolate risky sessions, or initiate remediation when a user deviates from their established baseline.
The CCIS curriculum highlights that Falcon Fusion is designed tointegrate identity risk signals with IT policy enforcement, enabling Zero Trust-aligned automation. This capability goes far beyond simple notifications and supports coordinated responses across security and IT teams.
Options A, B, and C are incorrect because Falcon Fusion is fully identity-aware, applies broadly across users and entities, and

supports a wide range of actions beyond email notifications. Therefore,Option Daccurately describes how behavioral profiling strengthens Falcon Fusion workflows.

NEW QUESTION # 52
Can a specific detection be excluded altogether or just per entity?

- A. All detections can be disabled, some detections support excluding entities
- B. Only detections can be disabled using the Identity-Based Detection # Detection Exclusion page
- C. Adding an exclusion for a detection creates a security hole, therefore a detection cannot be excluded
- D. Only specific entities can be excluded by using the Identity-Based Detection # Detection Exclusion page

Answer: A

Explanation:
Falcon Identity Protection provides flexible control over how identity-based detections are handled through the Detection Exclusionsframework. According to the CCIS curriculum, administrators can eitherdisable an entire detection typeor, where supported,exclude specific entitiessuch as users, service accounts, or endpoints from triggering that detection.
Not all detections support entity-level exclusions. For detections that do, exclusions allow organizations to suppress known benign behavior without disabling the detection globally. This is particularly useful for service accounts or legacy systems that generate expected but non-malicious activity. When entity-level exclusion is not supported, administrators may choose todisable the detection entirely, which stops it from generating alerts across the environment.
The CCIS documentation clearly explains this dual model:
* All detections can be disabled, regardless of type
* Only some detections support entity-based exclusions
This approach balances operational flexibility with security integrity and avoids the misconception that exclusions automatically create security gaps. Therefore,Option Cis the correct and verified answer.

NEW QUESTION # 53
Which option can be selected from the Threat Hunter menu to open the current Threat Hunter query in a new window as Graph API format?

- A. Save as Custom Query
- B. Save as Custom Report
- C. Open Query in API Builder
- D. Export to API Builder

Answer: C

Explanation:
Falcon Threat Hunter provides a direct integration with theAPI Builderto support advanced investigation workflows and automation. According to the CCIS curriculum, analysts can take an existing Threat Hunter query and convert it into aGraphQL-compatible formatby selectingOpen Query in API Builderfrom the Threat Hunter menu.
This option opens the current query in a new window within API Builder, automatically translating the query structure into GraphQL syntax where applicable. This enables security teams to reuse validated hunting logic for automation, reporting, or external integrations without rewriting queries from scratch.
The other menu options serve different purposes:
* Export to API Builderis not a valid menu action.
* Save as Custom Querystores the query for reuse inside Threat Hunter.
* Save as Custom Reportgenerates a reporting artifact, not an API query.
BecauseOpen Query in API Builderis the only option that opens the query in GraphQL format in a new window,Option Dis the correct and verified answer.

NEW QUESTION # 54
Which menu option isNOTincluded in Falcon Identity Threat Detection (ITD)?

- A. Settings
- B. Privileged Identities

- C. Event Analysis
- D. Policy Rules

Answer: D

Explanation:
Falcon Identity Threat Detection (ITD) providesvisibility, analytics, and detectionof identity-based threats but doesnot include enforcement capabilities. According to the CCIS curriculum, ITD customers have access to investigative and analytical features such asEvent Analysis,Privileged Identities, and relevant Settingsfor visibility and monitoring.
Policy Rules, however, are part ofIdentity Threat Protection (ITP)and reside in theEnforcesection of the Falcon console. Policy Rules enable automated responses and enforcement actions, such as blocking access or enforcing MFA, which are not available under ITD-only subscriptions.
This distinction is critical in the CCIS material:
* ITD = Detect and analyze identity threats
* ITP = Detect + enforce policy actions
Because ITD does not include enforcement functionality,Policy Rules are not available, makingOption Dthe correct answer.

NEW QUESTION # 55
Which of the following isNOTa default insight but can be created with a custom insight?

- A. Using Unmanaged Endpoints
- B. GPO Exposed Password
- C. Poorly Protected Accounts with SPN
- D. Compromised Password

Answer: C

Explanation:
In Falcon Identity Protection,default insightsare prebuilt analytical views provided by CrowdStrike to immediately highlight common and high-impact identity risks across the environment. These default insights are automatically available in theRisk AnalysisandInsightsareas and are designed to surface well-known identity exposure patterns without requiring customization.
Examples ofdefault insightsincludeUsing Unmanaged Endpoints,GPO Exposed Password, and Compromised Password. These insights are natively provided because they represent frequent and high-risk identity attack vectors such as credential exposure, unmanaged authentication sources, and password compromise, all of which directly contribute to elevated identity risk scores.
Poorly Protected Accounts with SPN (Service Principal Name), however, isnot provided as a default insight. While Falcon Identity Protection does collect and analyze SPN-related risk signals-such as Kerberoasting exposure and weak service account protections-this specific grouping must be created by administrators usingcustom insight filters. Custom insights allow teams to define precise conditions, combine attributes (privilege level, SPN presence, password age, MFA status), and tailor risk visibility to their organization's threat model.
This distinction is emphasized in the CCIS curriculum, which explains thatcustom insights extend beyond default coverage, enabling deeper, organization-specific identity risk analysis. Therefore,Option Dis the correct answer.

NEW QUESTION # 56
......

In the information era, IT industry is catching more and more attention. In the society which has a galaxy of talents, there is still lack of IT talents. Many companies need IT talents, and generally, they investigate IT talents's ability in according to what IT related authentication certificate they have. So having some IT related authentication certificate is welcomed by many companies. But these authentication certificate are not very easy to get. CrowdStrike IDP is a quite difficult certification exams. Although a lot of people participate in CrowdStrike IDP exam, the pass rate is not very high.
