# 2026 XSOAR-Engineer Exam Materials | Efficient Exam XSOAR-Engineer Duration: Palo Alto Networks XSOAR Engineer

After the client pay successfully they could receive the mails about XSOAR-Engineer guide questions our system sends by which you can download our test bank and use our study XSOAR-Engineer STUDY materials in 5-10 minutes. The mail provides the links and after the client click on them the client can log in and gain the XSOAR-Engineer Study Materials to learn. The procedures are simple and save clients' time. For the client the time is limited and very important and our product satisfies the client's needs to download and use our XSOAR-Engineer practice engine immediately.

Palo Alto Networks XSOAR-Engineer Exam Syllabus Topics:

Topic	Details
Topic 1	• Threat Intelligence Management: This domain focuses on threat intelligence operations including indicator creation and configuration, indicator relationships, enrichment with source reliability, external intelligence sharing, and exclusion list management.
Topic 2	• Playbook Development: This domain addresses automation through playbook creation including task configuration, context data manipulation, various task types, sub-playbooks with looping, filters and transformers, debugger usage, built-ins and scripts, automation script creation, and job management.
Topic 3	• Incident Interactions and Reporting: This domain covers incident operations including states and actions, War Room activities, incident relationships, and dashboard and report configuration for metrics and visualization.
Topic 4	• Use Case Planning and Development: This domain focuses on designing security use cases through incident and indicator lifecycle management, field and layout customization, classifier and mapper configuration, incident creation methods, pre • post-processing, and incident type configuration with playbooks, layouts, SLAs, and lists.
Topic 5	• Planning, Installation, and Maintenance: This domain covers system setup and administration including authentication configuration, engine deployment, dev • prod environment planning, Marketplace pack management, integration instance configuration, and system maintenance.

Exam XSOAR-Engineer Duration, XSOAR-Engineer Reliable Test Pdf

To fit in this amazing and highly accepted exam, you must prepare for it with high-rank practice materials like our Palo Alto Networks XSOAR Engineer XSOAR-Engineer study materials. Our XSOAR-Engineer exam questions are the Best choice in terms of time and money. If you are a beginner, start with the learning guide of XSOAR-Engineer Practice Engine and our products will correct your learning problems with the help of the Palo Alto Networks XSOAR-Engineer training braindumps.

Palo Alto Networks XSOAR Engineer Sample Questions (Q97-Q102):

NEW QUESTION # 97
What is the most effective way to correlate multiple raw events coming from a SIEM and link them together?

- A. Process all alerts by running the respective playbook and link related incidents during post-processing
- B. Configure a pre-process rule to link related events as they are ingested
- C. Manually go through the incidents created by the raw events and link related incidents
- D. Ingest all raw events, run a custom script to find the relationship between them and proceed to link them together

Answer: B

NEW QUESTION # 98
In a Dev/Prod deployment model, what is available only in the development tenant?.

- A. Marketplace.
- B. "Export all custom content" feature.
- C. Content Repository page.
- D. Custom integration instances.

Answer: B

Explanation:
In Cortex XSOAR's documented Dev/Prod deployment model, the development tenant is designed to be the workspace where engineers create, modify, test, and validate content before promoting it into production. As part of this workflow, the development tenant includes the "Export all custom content" feature, which generates a structured content bundle containing custom playbooks, integrations, fields, layouts, lists, and other artifacts. This bundle is then imported into the production tenant to ensure controlled, versioned, and tested promotion of content.
The Admin Guide highlights that this export capability is restricted to the development environment to preserve the integrity and stability of the production tenant. Production systems are intentionally limited, allowing only the import (not export) of custom content to prevent accidental overwriting, drift, or unintended modifications.
Marketplace access (A) exists in both tenants. Custom integration instances (C) can be created in either tenant. The Content Repository page (B) is also available across both environments.
Therefore, the only feature exclusive to the development tenant is D: "Export all custom content." This ensures a safe, repeatable Dev#Prod promotion model aligned with enterprise change-control requirements.

NEW QUESTION # 99
In which three locations can an engineer try to find information, when troubleshooting a failed integration instance error produced by the test button? (Choose three.)

- A. The log bundle
- B. The error message returned directly below the button
- C. The audit log
- D. The source code for an integration
- E. The playground war room

Answer: A,B,D

NEW QUESTION # 100

During the regular maintenance of XSOAR a customer noticed that there was an update available for the Active Directory content pack (current version 1.4.6) and updated the content pack to the latest version (version 1.4.11). However, after the update the customer noticed that the Active Directory Query integration is not working properly and asked you to resolve the issue.
Which of the following set of steps can help to resolve the issue?

- A. Navigate to SettingsView the configured integrations and select Active Directory AuthenticationDelete all integration instances and add all integration instances again
- B. Navigate to SettingsView the configured integrations and select Active Directory QueryDelete all integration instances and add all integration instances again
- C. Navigate to MarketplaceView the installed content pack and select Active Directory content packSelect version 1.4.6 and click on "Revert to this version"
- D. Navigate to MarketplaceView the installed content pack and select Active Directory content packClick on uninstall content packNavigate to Marketplace browser and reinstall the Active Directory content pack

Answer: B

Explanation:

NEW QUESTION # 101

Assuming an incident type configuration runs the associated playbook automatically, which pre-process rule action can preserve matching incidents without triggering the playbook?.

- A. Link.
- B. Close.
- C. Update.
- D. Drop.

Answer: A

Explanation:
Pre-process rules allow XSOAR to evaluate incoming events before they are fully created as incidents. These rules can suppress, modify, or relate events based on defined criteria. According to the Admin Guide, when a pre-process rule uses theLinkaction, XSOAR links the incoming event to an existing incident without triggering the standard incident creation process or subsequent playbook execution. This preserves the data for correlation and investigation while preventing duplicate or unnecessary playbook runs.
TheCloseaction (A) suppresses incidents completely and is used to auto-close unwanted events; this prevents preservation of the event and does not trigger the playbook. TheDropaction (C) discards incoming events entirely, removing them from the system and not preserving them. TheUpdateaction (B) modifies or enriches existing incidents but does not stop the playbook from running on newly created incidents of that type.
Because the requirement is topreserve the incident while also preventing automatic playbook execution, the Link action is the only workflow that fulfills both requirements according to XSOAR's pre-process rule architecture. Thus, optionDis correct.
